

PRO500 ANTENNA SIRIUSXM RADIO

**PIXEL TECHNOLOGIES
EXCLUSIVE PRODUCT**

HIGH GAIN SIRIUSXM SATELLITE RADIO ANTENNA

The Best Satellite Radio Antenna on the Market

This SiriusXM antenna brings in the highest signal strength in the industry.

The PRO500 kit includes everything needed to install into a client location, just add your own RG-6 cable. Unlike other Satellite Radio antennas, the PRO500 filters out all potential signal interference such as WIFI, CB radios, or Cell Phones that cause you to receive a weak signal. The PRO500 can run up to 200 feet of RG-6 coaxial cable before needing additional amplification or power. It is perfectly designed to work in areas such as Alaska, Mexico, the Caribbean, and remote parts of Canada.

PRO500 SPECIFICATIONS

Details	
Optimized	Multi-path rejection
High Gain	12 dBi from antenna
Internal Amplifier	2 stage ultra-high low noise
Filter	60 dB out-of-band attenuation to RF
Cable	Works with RG-6 Coaxial
Pole Mount	2 inch diameter pole
Antenna Cable Length	200 feet without amplifier
Wind/Weather Resistant	Wind up to 100mph

PACKAGE INCLUDES

Details
