The expanded Uncertainty of the Cannabinoid analysis is approximately ±
Analyzed CANX -
Estimated Total Cannabinoids = 78.75%
Estimated 9(r)-HHC-O concentration = 9.71%
D8 Concentration is estimated to be: 32.33%

Laboratory note: The estimated concentration of the unknown peak in the sample is 5.27% | Currently PharmLabs laboratory can not confirm the amount of this peak in your chromatogram due to interference (only with highly concentrated D8 products) from which we believe to be either (delta9-THC-O-acetate) or (delta9-THC-C8). At this time there are no referenced standards available for (delta9-THC-O-acetate) or (delta9-THC-C8) is a different compound from the main (delta9-THC, cannabinol) and therefore, these two compounds may have different efficacies. Using the most advanced instruments and methods are being studied to identify this compound.
