

APPLICATION DATA SHEET

ENVIROGRAF®

AP042-HW PS-01-2015

Product Number: 42

HW/PS Paint Stripper

Description:

HW/PS paint stripper for use where existing paint or varnish needs to be removed before applying Envirograf® Fire Protection. Non Methylene Chloride, non-caustic, non-flammable and extremely effective.

Application:

Shake container well before use. Ensure there is adequate ventilation when working. Wear protective gloves. Pour a quantity of HW/PS into a suitable container. Using a suitable brush apply a generous even coat (do not brush out) onto the surface to be stripped. Leave for approximately 30 minutes and apply a second coat if required; areas where there are less than 5 layers of paint or varnish may not require a second coat. Once the stripper has penetrated to the substrate, scrape off leaving surface as clean as possible. Rub down stripped area using a scrubbing brush or stainless steel pad and water. Rinse with water and allow to dry.
