

APPLICATION DATA SHEET

ENVIROGRAF®

AP107-10-2014

Product Number: 107

Domestic and Industrial Threshold Door Seals

Description:

Envirograf® Product 107 door thresholds are designed for flat thresholds with heavy traffic (such as bikes, fork-lift trucks, prams, trolleys, wheelchairs, etc.) They are designed with wheelchair users in mind enabling them to pass over a door threshold or from carpeted areas to non-carpeted areas with ease. Made from high tensile fireproof plastic mouldings, enabling them to be used in conjunction with fire doors. Mouldings are available in black, brown or grey, with plastic-backed slot-in carpet pile threshold seal (available in black only). This product is sufficiently durable to take heavy corridor and entrance traffic without impairing the effectiveness of the carpet pile seal, therefore maintaining good acoustic, draught and weather sealing, particularly in conjunction with other Envirograf® seals such as Products 73, 74, 75, 119 and 120 on the door.

Application:

Remove the carpet section from the seal, drill and screw the seal into position and slot the carpet back into the holder unit. Fixing screws are included.

Application of flexible mastic sealant to the underside of the mouldings ensures a water-tight seal.

When used in combination with other Envirograf® seals on the door, the Envirograf® IT seal offers acoustic, draught and weather protection in situations where a threshold seal is required on a flat surface, particularly where there is no weather bar. The seal is suitable for internal or external use. The seals are not affected by sea air or water.
