Intumescent Glazing Channels

Description:

Intumescent glazing channels available in two types:

FGC is a flexible channel containing an intumescent strip either side for glazing. Designed for areas where noise and vibration is common.

PGC is a white or brown rigid plastic channel with intumescent material factory-fitted inside with neoprene fins to hold the glass firmly in place.

Application:

FGC flexible glazing channels can be used for circular, oblong and square glazing fixtures. The channel is fitted around the edge of the glass which is then held in place using hardwood or softwood beading.

PGC rigid plastic channels simply slides over the glass and is suitable for 5 – 7mm glass. Held in place using hardwood or softwood beading.
