

Product Number: 116

Protector for Etched or Stained Glass

Description:

A 2100mm long metal trim in standard finishes of brown or white (other colours available at extra cost). The protector is complete with pre-fixed intumescent seals.

Application:

Where decorative glass or plain glass windows require 30 minute or 60 minute fire protection, Envirograf® have developed a metal trim to surface mount onto the risk side of the partition or door to take Northern Wired Plain Clear – 6mm – 30 minute glass or Pilkington Clear Wired Glass for 60 minute protection and CGI Glass.

The section as shown below is easily installed. Intumescent A is already fitted to the Stained Glass Protector. Intumescent B needs to be fitted to the opposite side of the glass. Then the unit needs to be fitted as below. Note: When cutting the product ensure the ends are mitered as this will give a better finish.
