

### Product Number: 149

## Fire & Acoustic Cable Management

### Description:

A two-part metal unit which offers both sound and fire protection where cables are required to pass through ceilings or walls. Attached to the wall either side of the service opening, the hatches on either side of the unit are opened to allow cables (maximum diameter of 25mm) to pass through then screwed back in place to maintain the integrity of the wall or ceiling. Full sound and fire protection is provided by the acoustic sponge and intumescent material lining the unit.

### Application:

The unit is screwed onto the wall using the screws supplied, either side of the service opening.

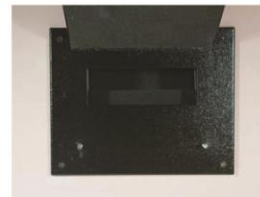

Multiple cables can be passed through. When cables are removed the sponge will return to its original shape.

Wall section top view open.

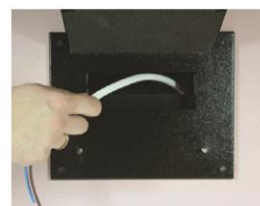

Wall section top view closed.

Fully sound and fire proof thanks to acoustic sponge and intumescent strips.

- As long as you can cut a hole in the wall or ceiling, you can easily install this product.
- Simply screwed onto the wall by 4 supplied screws.
- Can be finished in any RAL colour.
- Maximum cable diameter is 25mm for standard units.
- Once the cable has been removed, sponge will return to it's original shape.

Just pass through the cables and screw back.

You can put multiple cables through.
