

Product Number: 153

Fireproof Cable Support System

Description:

A fire resistant cable fixing system designed to fit around plastic trunking, tubing and armoured cables to hold cables in place in a fire situation.

Application:

The FCSS clips are fixed in place at regular intervals along plastic trunking, tubing or armoured cables using the keyhole fixings provided. It is important to ensure clips are fitted where cables pass above doorways and other access routes to keep them clear in the event of a fire.

The system allows easy access to the cables. Simply loosen the screws and open the clips for maintenance.
