- 2 x Quick Release straps

STAND EASY DELUXE AWNING

STAND EASY DELUXE Awning: Setup

- | |
|--|
| <p>1. Park at the proposed site you wish to setup, make sure you have enough clearance on the side of the vehicle for the awning to expand out</p> |
| <p>2. The Site should be level or close to it. If on a slight slope, face the awning down the slope as to prevent any wind getting under the awning causing it to lift</p> |
| <p>3. Unzip the Tonneau bag and fold the bag over the awning</p> <ul style="list-style-type: none">a. If the optional extension kit has been purchased, be careful when opening the bag, place the extension kit aside |
| <p>4. If putting the awning up in windy conditions with a single person, the supplied quick release straps should be pegged down roughly 2.5m out from the ends of the awning. Have the ties at arms reach for the next steps.</p> <p>Undo all Velcro ties holding the canvas and aluminium extrusion together</p> |
| <p>5. Let the canvas drop down, carefully pull out the awning all the way out to have fully stretched out (two people maybe required if it is too heavy or too windy to hold)</p> |
| <p>6. While holding the awning stretched out, fold out the aluminium legs on the front section and extend out to the required height, let the legs take the weight of the extrusion maintaining tension on the canvas.</p> <p>If using the supplied straps, connect them to each end of the awning through the black end caps, tighten slightly before moving to the next step</p> |

7. Fold out the aluminium arms from the rear extrusion and extend out, locate the spigot pin into the inside hole of the two holes available, repeat other side. Be careful when folding out the arms as to not tear or rip the canvas
8. Tension pole arms to get the canvas tight and even on both sides, tie down the aluminium arms with the Velcro straps on the canvas
 - a. (3500m versions) Insert roof support poles into the track on the vehicle by locating the spigot in the hole on the track and extending out to the front extrusion, lock off the pole and tie down with the Velcro ties.
9. Adjust the height of the poles and level out the awning. If being left unattended or it is raining, lower the pole height to allow for water run off.

10. Cross peg the tent pegs supplied into the folding foot plates (for beach camping an optional beach tie down kit should be used to hold down the awning)

If using the supplied straps, they can be removed now once the feet are pegged down.

If purchased the optional roof/wall extension can be put on now

1. End cap on the front of one side of the extrusion needs to be drilled out to 8mm into the sail track on the bottom (front) for the extension canvas piece to slide into **it is the users choice on which side the hole is drilled into (only drill one side only)**
2. Slide the extension piece into the sail track of the front aluminium extrusion, slide all the way to the end of the track (careful not to tear the fabric)

3. Undo all the Velcro ties and allow the canvas to fold out (If being used as a wall) peg down the wall at your desired angle through the holes in the eyelets on the ends of the aluminium bar

4. (If used as a roof) Peg down the ropes at an angle from the out stretched canvas roof
5. Insert the spigots from the aluminium poles through the eyelets on the aluminium bar

- Put the ropes over the spigots and tighten, adjust the pole height as necessary

STAND EASY DELUXE Awning: Packing Away

*****Please note: two people maybe required to set up and pack in winds over 5 knots or for unexpected wind gusts or use the tie down strap method to hold the awning*****

To pack the Stand Easy Deluxe Awning away, in reverse order repeat steps 10 through to 5 as per the setup instructions.

- Locate the plastic tongues on the end of the extrusion into the opposite side

- Lock off with the centre Velcro tie
 - (3.5m version) Tie the roof support poles to the centre Velcro strap
- Straighten up the canvas and neatly roll up
- Tie off the canvas with the two Velcro ties
 - (Optional roof extension) Place inside the bag before zipping up
- Place tent pegs in the Tonneau bag, zip up the awning bag

And you're done! Don't forget to clean up your site of any rubbish or debris to help keep this country beautiful.

If the awning is packed up damp. Be sure to put up again and soon as there is dry weather to dry the canvas out. Any abuse or neglect of awning can result in voiding the Warranty.
