

CUP O FLORA Potting Instructions

1
Open the box and separate the inner cup from the outer pot. Dispose of the silicone ring.

5
Remove the plant from its original pot ensuring that the roots are loose. If the roots started to entangle on the bottom of the pot, gently loosen them with your fingers.

2
Add approximately 2 cm of water to the outer pot, ensuring the water level remains below the inner cup.

6
Hold the plant upright in the inner cup and cover with fresh soil, leaving about 1 cm between the soil and the top of the pot.

3
Use tweezers to pull the white wick through the hole at the bottom of the inner cup so that about a third of the wick is inside.

7
Slightly press the soil to remove any air pockets and top up with more soil if required.

4
Fill the inner cup with approximately 1 cm of soil.

8
Place the inner cup with the plant into the outer pot. The wick will draw water to the plant's roots.
