Metric tons CO²
being sequestered

One SeaTree Token represents one metric ton of carbon dioxide "wiped out", and is comprised of the following:

- 1 metric ton of CO₂ sequestered through VCS/CCBA certified carbon credits sourced from the Southern Cardamom REDD+ Project, Cambodia.
- 4 mangrove trees planted in the Biak Region of West Papua, Indonesia, with our planting partner Eden Projects. This has the potential to sequester an additional 1.2 metric tons of CO₂ over the lifetime of the trees (25 years).
- 1 square-foot of kelp forest restored in Palos Verdes, California, with our restoration partner The Bay Foundation
