Good Chair

What are the Good Chairs?

"Good Chairs" is a line of ergonomic products, which thanks to their parameters and highest ergonomics standards support a creation of correct sitting position, what results in appropriate spine development. They are healthy chairs too. These chairs by profiling the lumbar lordosis force the load on the sciatic tumors, stimulate the correct position of pelvis which is a base for right setup of upper parts of spine. The products have sizes dedicated to height of users - it makes the chairs "grow up" with their youngest users. Good Chairs have been designed according to PN-EN 1729 standard.

CERTIFICATES

and attestations

A creation of modern spaces and interiors is a creation of healthy and safe environments. For this purpose a need is to use an equipment that will not only be not-endangering but will also actively or passively support safety fuctions.

The products presented in the catalogue are designed in accordance to the above-mentioned idea. We invite you to look into certificates and attestations of our products at www.entelo.pl

- 1** Concave-convex form of seat provides correct spine position what gives the user maximum of comfort. The angle of backrest complies with PN-EN 1729 standard and mobilizes spinal muscles to work what strengthens the spine.
- 2** Streamline shape - all edges of the seat are rounded properly to provide highest level of safety and comfort.
- 3** Elastic form - a backrest provides the "dynamic seat", what allows for continuous muscle work that prevents them from numbness.
- 4** Convex shape of the seat - it allows for correct position of legs and buttocks leaving them in natural position.
- 5** Solid construction - thanks to unique production technology it provides a longer time of use

THE IDEA **in a nutshell**

Good Chair is a product worked out in a participation with many scientist from various fields such as: orthopedics, ergonomics, physiotherapy and biomechanics. It allows for creation of optimal environment both at work in the office and at home. Good Chairs force the load on sciatic tumors by profiling of lumbar lordosis, stimulate right position of pelvis which is a basis for correct position of upper spine segments. As a result the products are the solution for spine and back problems as they prevent any posture defects.

GOOD CHAIR

5

simple steps
on how to design
your chair

1

Many of our customers can be called "the ambassadors of Good Chair project". Besides commercial relationship a common passion in creation of healthy and modern environment for work and study connects us with them.

2

We will offer a model of the chair matching your needs and requirements by choosing with you the features like fabric colour or type of finishing.

3

Basing on the information provided we will prepare a visualisation of your project.

4

We will discuss together the details of a final project and will implement any eventual corrections.

5

After a final acceptance of all details we get to work and create a unique chairs matching your needs.
