GENERAL INFORMATION

BATTERIES: WHAT DO I NEED TO KNOW ABOUT BATTERIES?

- Your Station comes with a CR2032 battery installed to preserve Time and History Records in the event of a power failure. Power Cord is required to operate this station.
- Your LTV-WSDTH01 Wind/TH sensor comes with a ML2032 rechargeable battery. This is charged by the solar panel on the front of the sensor to extend sensor life up to 3 years.

IMPORTANT: The ML2032 battery and the CR2032 battery are not interchangeable. Using the incorrect battery can potentially damage your sensor.

HARDWARE: SENSORS AND STATION

Your 79400 station comes with:

LTV-WSDTH01 Sensor with Wind Speed, Wind Direction, Temperature and Humidity Transmission at 915MHz RF.

WHAT ARE THE POWER REQUIREMENTS FOR THIS STATION?

LTV-WSDTH01: 1 ML2032 battery

79400: 5 volt power cord (required) and CR2032 batteries for backup of your time and date. Battery operation only will not update sensor data. Power cord is required.

POWER INPUT: WILL THIS STATION WORK IN OTHER COUNTRIES??

- Your power cord input is 100-240V and may work in other countries if the proper plug adapter is used (not included).
Note: There is no guarantee that this power cord will work in other countries.

SETUP AND MOUNTING

SETUP: HOW DO I SETUP MY STATION?

1. Remove the Isolation Tab from the LTV-WSDTH01 sensor and turn the switch to ON.
2. Install power cord into wall outlet, and into the station. Remove the insulation tab from the CR2032 battery in you station.
3. Let sensor and station sit within 10 feet of each other for several minutes to lock the sensor signal to the display.

WHERE TO I PLACE MY STATION?

Your station is designed for flexible placement on a desk or countertop, or to position on the wall. When the stand is closed, it provides wall mounting holes.

- Position within reach of an outlet that is always active. Some outlets in living rooms and in bedrooms may only be active when the light switch is on.
- This station must operate with the 5 volt power cord in order to receive sensor updates. Operation on battery power will only maintain time/date settings if you need to move your station.
- Best reception occurs when only one wall is between your station and each sensor outside.
- Position you station six feet from other electronics and wireless devices. If you suspect RF (radio frequency) interference, simply move your weather station a few feet.

MOUNTING: WHERE DO I MOUNT/POSITION MY SENSORS?

LTV-WSDTH01:

For Accurate Measurements

- **Ensure the sensor is mounted level with the Solar Panel facing directly to the south.** This will help optimize battery life and transmit correct wind direction readings.
- Ideally, the Breeze Pro Sensor should be mounted on the tallest object in your area. Avoid positioning the sensor in line or below eaves, rooflines, trees, or other objects that may obstruct wind readings.
- Make sure all screws on the Mounting Bracket, Winds Cups, Wind Vane, and Battery Compartment are securely fastened.
- The sensor should be mounted with the Wind Cups on top.

Note: General Wind Sensor mounting video: http://bit.ly/wind_sensor_mounting

Included Mounting Accessories

Basic Installation Options

Fence posts, poles, decks, and even mailboxes are all common mounting options due to their convenience. Many users prefer these types of locations as the data they provide is accurate from their ground level perspective. However, because wind in these spots is often affected by obstructions, the readings may differ compared to local reporting stations.

1A Adjustable Base

Basic Assembly

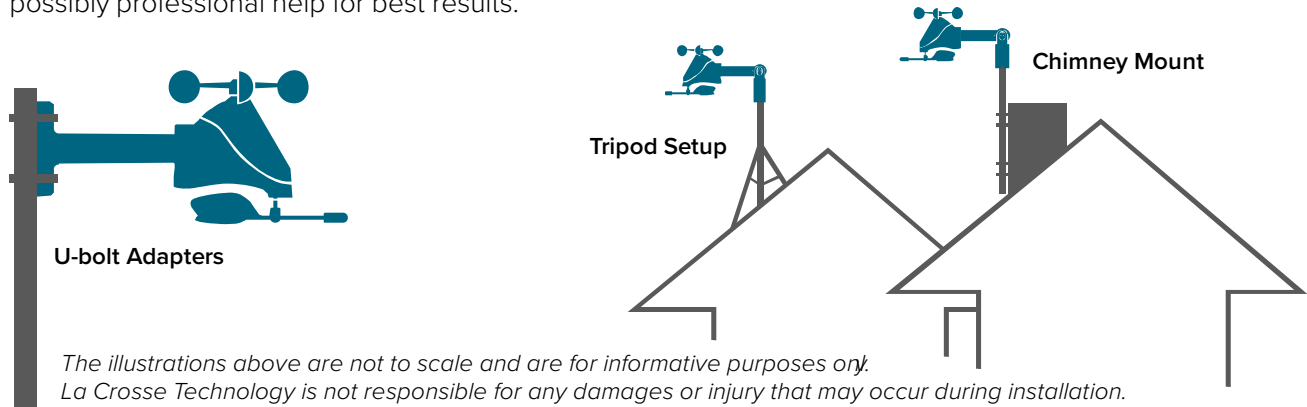

- 1A. Mount the Adjustable Base onto a flat surface using the provided four long screws.
- 1B. Secure the Pole Adapter to a cylindrical conduit using the provided two small screws.
2. Insert the Mast into the Breeze Pro Sensor and tighten the provided screws on the sides.
3. Use the Hand Screw to attach the Mast to either the Adjustable Base or Pole Adapter. Ensure the sensor is level, facing south, and securely fastened at all mounting points.

1B Pole Adapter

Advanced Installation Options

Some advanced installation options include tripods, wall mounts, eave cross mounts, chimney mounts, and many others. Any of these can be combined with U-bolts for attachment onto a tall cylindrical conduit using our Adjustable Base. Please note that these advanced options will require additional equipment and possibly professional help for best results.

WHAT IS DISTANCE | RESISTANCE | INTERFERENCE?

Distance:

- The maximum transmitting range in open air is over 330 feet (100 meters) between each sensor and your station.
- Consider the signal path from your station to each sensor as a straight line.
- Consider the distance the station is from other electronics in the home.

Resistance:

- Each obstacle: walls, windows, vegetation, stucco, concrete, and large metal objects will reduce the effective signal range by about one-half.
- Mounting your sensors on a metal fence can significantly reduce the effective signal range.

Interference:

- Consider electronics in the signal path between the sensors and your station.
- Simple relocation of the sensors or the station may correct an interference issue.
- Windows can reflect the radio signal.
- Metal will absorb the RF (radio frequency) signal.
- Stucco held to the wall by a metal mesh will cause interference.
- Transmitting antennas from: ham radios, emergency dispatch centers, airports, military bases, etc. may cause interference.
- Electrical wires, utilities, cables, etc. may create interference if too close.

WHAT IS THIS EXTRA SENSOR AREA?

Explanation: The Extra Sensor area is a place to show up to 4 additional, compatible, sensors on the station itself.

So, if you want extra Temperature/Humidity sensors, or add a Rain sensor, you can display them in the Extra Sensor area.

If you do not have or want additional sensors, this area will show you the Barometric Pressure from your weather station's internal Pressure Sensor.

View Extra Sensors:

1. Press the EXTRA button to toggle through Pressure and any sensors reading to your Extra Sensor Area.
2. When the Auto-Scroll Icon  shows, your station will scroll through all readings in the Extra Sensor Area. To stop the auto-scroll, continue to press the EXTRA button until the icon disappears.
3. If the Auto-Scroll Icon  is not showing, your station will stay on the reading selected.

Optional Extra Sensors: Up to 4 additional Thermo-Hygro, Wind Speed, Rain, Water Leak, Pool, BBQ or any combination of these sensors can read to the EXTRA SENSOR area of your display. Simply press and release the EXTRA button to view these sensors or turn on Auto Scroll.

Purchase compatible sensors at: <https://www.lacrossetechnology.com/sensor-finder/>

HOW DO I ADD EXTRA SENSORS TO MY STATION?

1. Hold the EXTRA SENSOR button 3 seconds, to add a sensor to the station.
2. Install batteries in the sensor, and if the sensor has a TX button, press the TX button to force a signal.
3. Allow up to 3 minutes to view sensor and ID on station.
Note: Once sensor is found the search will stop. Sensor ID, and type will show for 3 seconds then return to normal display.
4. Added sensors will be available for display in Extra Sensor area of station.

HOW DO I DELETE EXTRA SENSORS FROM MY STATION?

1. Press and release the EXTRA SENSOR button until you see the sensor and ID you wish to delete.
2. Hold the MINUS (-) button for 3 seconds to delete this sensor. The sensor readings and ID will show dashes.
3. Sensor will no longer show in the Extra Sensor area.

HOW DO I INTERPRET THE CURRENT WIND READINGS?

- **NOW Wind Speed** - is the highest current wind speed at the last record. (31 seconds)
- **1 Hr. Top Speed** – is the highest wind speed reading in the past hour.

- **Compass Rose:**
 - The Compass Rose displays the cardinal directions with visual indicators.
 - The large diamond on the rose indicates the wind direction.
 - The smaller triangles should be display next to the big triangle to create more emphasis to the direction and let the user know that the direction variates constantly.
- **Wind Speed Trend Indicators:**
 - The Wind Speed Trend Indicator shows trends in wind speed over the past 60 minutes.
 - The Trend Arrows will update every 15 minutes based on the “Now” Wind Speed readings from the past 60 minutes.

HELP ME UNDERSTAND THE WIND HISTORY READINGS.

In addition to the one hour history which is constantly shown on the station, you can view wind speed history at 24 hours, 7 days, current month, and current year.

Press and release the WIND button to toggle through the Wind Speed History times.

- **1 Hour Top Speed**- Updates each hour and shows the highest wind speed in the past 60 minutes.
- **24 Hour Wind Speed** – Shows the top speed in the past 24 hours from the last record. This is a rolling 24 hour period and not a set midnight to midnight reading. This means it updates each hour to show you the past 24 hours.
- **7 Days** - Shows the top speed in the past 7 days from the last record. This is a rolling 7 day period, not a Monday through Sunday record. Updates at midnight each day.
- **Month** – Shows top wind speed for the current month. Record is from the first day of the month to the last day of the month. When in the middle of the month, it will show the readings from the first day of the month to the last full day. Example: If today is the 15th of the month, the top speed is from the 1st to the 14th. After midnight, the 15th will be included.
Note: Press and release the PLUS (+) button to view up to 11 previous months or history.
- **Year** – Shows top wind speed for the current year. January 1, through December 31st.

WIND SPEED ALERT

Set Wind Alert:

1. Hold the WIND ALERT button 2 seconds to enter alert set mode. WIND SPEED ALERT and the Number will flash. Use the + or – buttons to set. Hold the + or – buttons to scroll quickly.
2. Press and release WIND ALERT button to save and exit.
3. Wind Alert is armed when set.

Activate/Deactivate Wind Speed Alert:

1. Press the WIND ALERT Button to activate or deactivate the wind speed alert.
2. WIND SPEED ALERT ON or OFF will show for 2 seconds.

HOW DO I RESET THE WIND HISTORY READINGS?

Your wind speed history readings are reset individually.

1. Press and release the WIND button to view the history reading you wish to reset.
2. Hold the MINUS (-) button for 5 seconds to reset that value to current wind speed.
3. Press and release the LIGHT button to exit.

HOW OFTEN DOES MY WIND SENSOR UPDATE?

- Your Breeze Wind Sensor checks for any change in Wind Speed every 31 seconds, with samples every 3 seconds within that 31 seconds.
- Any change of 0.8km Wind Speed will cause the sensor to send the top speed for that 31 seconds.
- If there is no change in wind speed, the sensor will transmit every 3 minutes to preserve battery life.
- The sensor will transmit every minute in temperatures below freezing.

HOW DO I VIEW MY HI AND LO TEMPERATURE/HUMIDITY READINGS?

Your high and low temperature and humidity readings are recorded with time and date of occurrence. Each time a new high or low reading is recorded, that reading with time and date of occurrence will show.

To view your HI | LO records, simply press and release the TEMP button.

Viewing order:

- Outdoor HI Temperature
- Outdoor LO Temperature
- Outdoor HI Humidity
- Outdoor LO Humidity
- Indoor HI Temperature
- Indoor LO Temperature
- Indoor HI Humidity
- Indoor LO Humidity
- Feels Like HI
- Feels Like LO
- Dew Point

Note: Dew Point does not have a time/date of occurrence.

HOW DO I RESET THE TEMPERATURE/HUMIDITY READINGS?

Your temperature and humidity readings are reset individually.

1. Press and release the TEMP button to view the reading you wish to reset.

2. Hold the MINUS (-) button for 5 seconds to reset individual temperature or humidity value to current temperature, humidity, time and date.
3. Press and release the LIGHT button to exit.

HOW OFTEN DOES MY TEMP/HUMIDITY SENSOR UPDATE?

- Your Wind/TH Sensor checks for any change every 31 seconds.
- Any change of +/- 0.5°C, or Hum +/- 2% RH will cause the sensor to send a reading.
- If there is no change in temperature or humidity, the sensor will transmit every 3 minutes to preserve battery life.
- The sensor will transmit every minute in temperatures below freezing.

WHAT IS FEELS LIKE AND DEW POINT TEMPERATURE?

Feels Like temperature indicates both Wind Chill and Heat index on stations with wind speed

- **Feels Like Temperature shows Wind Chill:** When the temperature is *below 50°F*, and generally a 5 mph sustained wind speed, the Feels like Temperature is showing Wind Chill.
- **Feels Like temperature shows Heat Index:** When the temperature is *above 80°F*, the Feels like temperature is showing the Heat Index.
- **Feels Like temperature shows Current Temperature:** When temperature is between 51°F and 79°F, the Feels like temperature will *remain the same* as the outdoor temperature regardless of humidity or wind speed.

TIME: DOES THIS STATION HAVE ATOMIC TIME?

- **No.** The time and date need to be set manually on this station.

HOW DO I MANUALLY SET THE TIME?

1. Hold the SET button 2 seconds to enter settings mode.
2. Press the + or - button to adjust the flashing values.
3. Hold the + or - button to adjust quickly.
4. Press the SET button to confirm adjustments and move to the next item.
5. Press the LIGHT button at any time to exit.

Settings Order:

- Language (English, Spanish, French, German)
- Greeting HELLO SETUP TIME
- 12HR/24HR
- Hour
- Minute
- Year

- Month
- Date
- Fahrenheit/Celsius
- Pressure: InHg / hPa
- Pressure number setting
- Wind Speed MPH or KMH
- Wind Direction Letters or Degrees
- THANK YOU

Note: Units in the settings menu reflect how sensors will show on the station and which units are shown in Data Stream. This includes the Extra sensors. I.E. When Fahrenheit is selected- Fahrenheit on station and in Data Stream.

Full Program Menu:

1. Hold the SET button for 2 seconds to enter setting mode. ENGLISH will show. Press the + or - button to change to another language (Español, Français or Deutsch).
2. Press SET button and the Greeting (HELLO SETUP TIME) will show for two seconds, then automatically move to 12/24 hour time. 12/24 HOUR FORMAT will show. 12HR flashes. Press the + or - button to turn select 24 hour time format.
3. Press SET to confirm and move to the hour. HOUR will show. The hour flashes. Press the + or - button to choose the hour.
4. Press SET to confirm and move to the minutes. The MINUTES will show. Minutes flash. Press the + or - button to choose the minutes.
5. Press SET to confirm and move to the year. The YEAR 2019 will show. Year will flash. Press the + or - button to change the year.
6. Press SET to confirm and move to the month. The MONTH will show. The Month will flash. Press the + or - button to change the month.
7. Press SET to confirm and move to the date. DATE will show. Date will flash. Press the + or - button to change the date.
8. Press SET to confirm and move to the temperature unit. TEMP °F FAHRENHEIT will show. °F will flash. Press the + or - button if you prefer °C (Celsius).
9. Press SET to confirm and move to pressure units. BAROMETRIC PRESSURE will show. INHG will flash. Press the + or - button to select HPA.
10. Press SET to confirm and move to adjust pressure number. BAROMETRIC PRESSURE will show. Pressure number will flash. Press the + or - button to adjust pressure number.
11. Press SET to confirm and move to pressure units. WIND SPEED will show. MPH will flash. Press the + or - button to select KMH.
12. Press SET to confirm and move to the pressure number. WIND DIR LETTERS will show. NNE will flash. Press the + or - button to select DEGREES.
13. Press SET to confirm. THANK YOU shows for 2 seconds, then exit the setting menu.

Note: After 10 seconds with no button press, station returns to normal time display.

BACKLIGHT: DOES THIS STATION HAVE A BACKLIGHT?

Yes, your station has a backlight with 5 levels of intensity.

- Press and release the LIGHT button to adjust the backlight intensity or to turn it off.
- Intensity levels: 0% (OFF) | 1.5% | 20% | 50% | 100%

WHAT IS AUTO DIM?

You can set your backlight to automatically dim to level 1 at a set hour for sleeping, then automatically return to full brightness when you wake.

Set Auto Dim (Hour only):

1. Hold the LIGHT button 2 seconds to enter dimmer set mode. AUTO DIM OFF will show.
2. Press the + or – buttons to turn dimmer (ON). AUTO DIM ON will show.
3. Press the LIGHT button to select start time (Hour) for dimmer. AUTO DIM START TIME and the hour will flash.
4. Press the + or – buttons to change the hour for the dimmer to be low light level.
5. Press the LIGHT button to select start time for dimmer to be on High light level. AUTO DIM STOP TIME and the hour will flash.
6. Press the + or – buttons to change the hour for the dimmer to be high light level.
7. Press the LIGHT button to confirm exit.

Note: Hold LIGHT button at any time to exit dimmer settings.

CAN I OPERATE MY STATION ON BATTERY POWER ONLY?

- No. The power cord is required for your sensors to update.

BATTERY: WHAT DO THE BATTERY ICONS MEAN?

- A battery icon will appear near your WIND reading when you need to charge the battery in your wind sensor.
- A battery icon will appear near your TIME reading when you need to change batteries in your station.

WEEKDAY: HOW DO I CORRECT THE DAY OF THE WEEK?

- The day of the week will set when the Year, Month, and Date are set. If your day of the week is incorrect, yet the month and date are correct, please go the [program menu](#) and check the YEAR setting.

DOES THIS STATION HAVE 12 HOUR AND 24 HOUR TIME OPTIONS?

- Yes, you can select 12 hour or 24 hour time format in the [program menu](#).

FORECAST ICONS: WHAT DO THE FORECAST ICONS MEAN?

The forecast icons predict weather condition over the next 12-hours based on the change of atmospheric pressure with about 70-75% accuracy. As weather conditions cannot be 100% correctly forecasted, we are not responsible for any loss caused by an incorrect forecast.

Forecast Icons:

- Sunny
- Partly Sunny
- Cloudy
- Rain
- T-Storm
- Snow

Note: The “snow” icon appears when the temperature is below 32°F (0°C) and the forecast is rainy or stormy.

- Your station calibrates barometric pressure based on its location over time to generate an accurate, personal forecast. Please allow 7-10 days for barometer calibration.

Note: As the Station builds memory, it will compare the current average pressure to the past forty day average pressure for increased accuracy. The longer the Station operates in one location the more accurate the forecast icons will be.

HI/LO TEMPERATURES

Your Outdoor Temperature Records registered daily by your Thermo-Hygro Sensor. These will automatically reset at Midnight every day. The words OUTDOOR RECORDS will show.

HOW DO I DELETE SENSOR ID NUMBERS?

In the rare event you need to replace your sensor, you will first need to delete the old sensor ID from your station.

1. Remove batteries from your old sensor.
2. Press and release the SENSOR button to view your sensor ID number.
3. While viewing your sensor ID, hold the (-) button for 5 seconds to delete your old sensor ID. Dashes will show for the ID number.
4. Your station will automatically begin searching for the new sensor.
5. Install batteries in your new sensor and allow up to three minutes for your new sensor readings and ID to appear on your station.

FACTORY RESET: HOW DO I FACTORY RESET MY STATION?

- A factory reset will delete all sensor ID numbers.
- Basically, this is a great way to return your station to “out of the box” condition.

- This is more effective than removing all power for clearing out the station.
- All history records will be removed, so write down anything you want to keep.

To factory reset your station:

1. Hold the WIND ALERTS and LIGHT buttons together for 5 seconds.
2. When your station resets it will look for all sensors. Allow at least ten minutes to reacquire the sensors.

WHY DON'T THE TEMPERATURE/HUMIDITY READINGS ON MY STATION MATCH THE WEATHER REPORT?

- Your temperature and humidity readings are from your sensor at your location. Your local reporting station can be miles away so readings will differ.

TEMP ACCURACY: WHY DOES MY THERMO-HYGRO SENSOR READ INACCURATELY?

- The thermo-hygro sensor reads the environment. Since your Temperature/Humidity readings come from the Wind/TH sensor they may occasionally be inaccurate if the sunlight hits the sensor.
- If this is a common occurrence you can purchase an LTV-TH2 sensor and replace the Temperature/Humidity Reading from the Wind/TH sensor.

HOW TO REPLACE THE TH READING FROM THE WIND TH SENSOR WITH A LTV-TH2?

The new Wind Speed, Wind Direction Sensor with Temperature/Humidity may cause inaccurate temperature readings in some locations. Because of this, you have the option to remove the TH sensor reading (from the LTV-WSDTH01) and adding an additional TH sensor to read in the OUTDOOR area of the display.

1. Press SENSOR button once Station ID will show.
2. Press SENSOR button again ID **WTH123 THW SENSOR will show.**
3. Hold the MINUS (-) button for 5 seconds while viewing ID to delete ID WTH123.

To add a separate LTV-TH2 sensor:

- After deleting the TH sensor built into the Wind Sensor (ID: WTH123), press the SENSOR button on the station to view ID, then press the + (PLUS) button to search.
- Press the TX button on the add-on sensor.
- Sensor Icon  will show to indicate reading is coming from separate TH sensor.

WHAT DOES A READING OF “HI” OR “LO” MEAN?

- If your outdoor temperature reading shows “HI” or “LO”, check that your [batteries](#) are good.

- Overpower or underpowered batteries can cause this reading.
- If batteries are good, replace the outdoor sensor.
- If your temperature is fine but your humidity is reading “HI” or “LO” or dashes, your humidity may be below 10% Relative Humidity. Your sensor does not read below 10% humidity.

TEMP INTERMITTANT: WHY DOES MY TEMP/HUMIDITY READING COME AND GO?

- RF (radio frequency) communication may come and go occasionally. This can be normal in some environments (e.g. moister climates).
- If a sensor goes out, please wait 2-4 hours for it to reconnect on its own. Please be patient – these stations can reconnect on, after many hours out.
- RF (radio frequency) communication is not always 100% on. Certain temporary conditions can cause it to go out for a time (e.g. 100% humidity).

If a miss happens:

- If sensor loses connection to the station for any reason, the station will show dashes after 30 minutes.
- The station will search for 5 minutes every hour to reconnect with sensor.
- Be sure you have good [batteries](#). Manually search for your sensor.

Try this:

- Bring your sensor within 10 feet of your station and make sure it is connected to the station.
- After 15 minutes move the sensor into the next room with a wall between the sensor and the station for 1 hour.
- If there is no loss of signal in that hour, move the sensor just outside.
- Continue moving the sensor back to its original location.
- If you lose connection, look for sources of [interference](#).

HOW DO I CHANGE BETWEEN FAHRENHEIT AND CELSIUS?

- Enter the [program menu](#) to select Fahrenheit or Celsius temperature display on the station.

WHY ARE MY WIND CUPS NOT SPINNING?

- Check for debris or ice preventing cups from moving.
- Check mounting location. Look for obstructions that prevent the wind from reaching the sensor.
- In most cases, the wind sensor needs to be 4-6ft above the highest point on the roof in order to clear nearby obstructions and read accurately.
- A 50-foot clearance in all directions is best.
- Push down firmly on the center of the cups to reseal them.
- Cups are replaceable.

CAN I REPLACE MY WIND CUPS?

Occasionally, a bad storm with hail or debris that will damage your wind cups. These are easily replaced.

Replace wind cups:

1. Loosen the screw on side of cups
2. Remove cups
3. Install new cups
4. Tighten screw

Note: The screw in the wind cups will fit on the flat side of the metal stem on the sensor.

WIND READING 0.00: WHY DO I ONLY SEE 0.00 FOR WIND SPEED?

The 0.00 means your wind sensor is connected to your station.

- Check that the cups spin freely. Something may be preventing movement.
- Are your wind cups unbroken? After a storm it is good to check this.

WIND DASHES: WHY ARE THERE DASHES FOR WIND READINGS?

Dashes indicate the connection is lost between your station and the wind sensor.

- My first thought is always to check that my [batteries](#) are good. If it has been working and now is not, low batteries are the most common connection problem.
- Next, check your [distance, resistance and interference](#). If everything was working previously at the same location, this is likely not the issue. However sometimes there is new growth on trees or bushes that cause another barrier. Radio Frequency (RF) signal does not travel well through foliage due to the moisture content.
- Occasionally adding a new wireless electronic device to the home will cross the signal path for the sensor. If this occurs, try moving your station a few feet or turning the station 90 degrees for a better angle to receive the sensor signal.
- Press the SENSOR button until you see your sensor ID. Hold the PLUS (+) button for 3 seconds and your station will search for your individual sensor.
- If you regain connection while the sensor is mounted, great. If you do not regain connection, bring the sensor within 10 feet of the station and search again.

HOW DO I CHARGE THE WIND SENSOR?

Your sensor comes fully charged. Be sure to remove the Isolation Tab from the battery and move the ON/OFF switch to ON. If your sensor is not receiving full sunlight on the solar panel for several days, the signal may weaken or fail.

To recharge the battery:

1. Place wind sensor with solar panel in the full sun.
2. If signal is dashes, turn sensor OFF for 24 hours to allow the battery to charge.
3. After 24 hours turn sensor on and allow 10 minutes to reconnect to station.
4. If possible, place sensor in an area where the solar panel can receive full sun.

WIND AND TEMP INTERMITTANT: WHY DO MY READINGS COME AND GO?

- RF (radio frequency) communication may come and go occasionally. This can be normal in some environments (e.g. moister climates).
- If a sensor goes out, please wait 2-4 hours for it to reconnect on its own. Please be patient – these stations can reconnect on, after many hours out.
- RF (radio frequency) communication is not always 100% on. Certain temporary conditions can cause it to go out for a time (e.g. 100% humidity).
- Check that your sensor is receiving full sun on the solar panel.

If a miss happens:

- If your wind sensor loses connection to the station for any reason, the station will show dashes after 30 minutes.
- The station will search for 5 minutes every hour to reconnect with wind sensor.

Try this:

- Bring your wind sensor within 10 feet of your station and make sure it is connected to the station.
- After 15 minutes move the wind sensor into the next room with a wall between the sensor and the station for 1 hour.
- If there is no loss of signal in that hour, move the wind sensor just outside.
- Continue moving the wind sensor back to its original location.
- If you lose connection, look for sources of [interference](#).

WIND ACCURACY: WHY IS MY WIND SPEED INACCURATE?

- What are you comparing your wind speed to? Your local reporting station is miles from your location and should not be used for comparison.
- Check the unit of measure (MPH, or KMH).
- Check to see if your station receives the same repetitive wind speed recording from the sensor multiple times.
- Check that the cups turn freely.
- Check for obstructions that prevent clear wind flow to the cups.
- Check mounting. In most cases, the wind sensor needs to be 6 feet or more above the highest point on the roof in order to clear nearby obstructions and read accurately. A 50-foot clearance in all directions is best.
- It is helpful to send pictures of the sensor mounting, if you need to contact customer support.
-

WHY WON'T MY STATION CONNECT TO AN APP?

- There is a software error in the 79400 unit's WiFi chip. And though this part has been disabled, the unit remains a fully functional weather station providing accurate backyard wind speed, wind direction, temperature, humidity, and barometric pressure data. It also comes with our newly designed Breeze Pro sensor, which is easy to set up and boasts a 330ft transmission range.

WHY DO I SEE APP AND WIFI MESSAGES ON MY STATION?

This station does not support connected features and will not connect to WiFi. Some of the on-screen elements may not apply.

Please disregard the following items and messages:

- WiFi Icon 
- SEE APP TO CONNECT
- LOST WIFI
- CONNECT TO WIFI
- WAIT FOR WEATHER
- CHECK APP

Most of these are temporary and will only show for a limited time.
