

Pour Over

Kalita Wave

We're featuring the Kalita Wave in our step-by-step pour over guide. The wave-shaped brewer is built for even extraction and immersion while making it easy to play with brew ratios and contact time to pull out whatever flavor profiles maximize the cup.

INSTRUCTIONS

STEP 1

Pre-heat the Kalita Wave and rinse the filter by pouring boiling water over both with a mug or range server underneath.

STEP 2

Using a scale, measure 20 grams of ground coffee into the brewer.

STEP 3

Slowly pour 40g of water to bloom. From here, we are going to pour in concentric circles, or spirals. Start the timer, waiting 45 seconds before moving on.

STEP 4

At 45 seconds, add 80 grams of hot water until the scale reads 120 grams. Wait until the timer hits 1 minute 45 seconds before moving forward.

STEP 5

At 1 minute 45 seconds, add 130g of hot water until the scale reads 250 grams. Wait until the timer hits 2 minutes before moving forward.

STEP 6

At 2 minutes, add hot water until the scale reads 320 grams. You should finish pouring around 2 minutes 30 seconds. It will drip for another minute or so. Transfer your coffee and enjoy!
