

APPLYING POLISH PRO GEL POLISH COLOR

- 1. After shaping the free edge of the natural nail, gently push back and remove the cuticles with an orangewood stick or other implement.
- 2. A gentle, light buffing using an **Endurance 180/240 Grit Buffer** to remove surface oils will improve adhesion.
- 3. Clean and dehydrate the nail plate using a Nail Wipe saturated with Nailpure Plus.
- 4. Apply an even layer of **Essential Base Coat** to all five fingers. Be sure to cap the edges. Cure in the **Dual Cure Lamp** for 30 seconds in LED or for 2 minutes in UV.
- 5. Shake the **Polish Pro Colour** of your choice well before use (*Scarlet is shown here*). Apply a layer of colour. The first layer may look semi-translucent.
- 6. Cure in the **Dual Cure Lamp** for 30 seconds in LED or for 2 minutes in UV.
- 7. Repeat steps 5 & 6 for full colour coverage.
- 8. Apply a layer of **Essential Seal**, sealing and capping the edges.
- 9. Cure in the **Dual Cure Lamp** for 30 seconds in LED or for 2 minutes in UV.
- 10. Remove the tacky layer with a Nail Wipe saturated with Cleanse.
- 11. Condition the cuticle with a drop of **Nurture Oil**. With no additional drying time, your client will love chip-proof, smudge-free colour the mani of her dreams.
