

CANDY BALL DEMO

It is recommended to use a straight pin for this design, or a sharp implement. Using a dotting tool is not recommended as the ball does not come off of the dotting tool easy.

1. Dip the tip of your pin or sharp pointed implement into the **Tech-Gel Glitter Base**, let it settle into a small ball. Cure in the **Dual Cure Lamp** for 30 Seconds LED or 2 Minutes UV. Be sure to slowly turn the implement while curing or the gel will lose its roundness.
2. Paint the cured ball with **Polish Pro Gel Polish**, or **Tech Gel Colour**, or add **Secrets Sparkle Glitter**. Dip the embellishments or colour with another layer of **Tech-Gel Glitter Base** and cure in the **Dual Cure Lamp** for 30 Seconds LED or 2 Minutes UV.
3. Using **Polish Pro Color** Or **Tech Gel Colour** Paint three layers of Petals around the ball. Cure in the Dual Cure Lamp for 60 Seconds LED or 2 Minutes UV.
4. Dip the ball into the **Tech-Gel Glitter Base** to coat your layer of petals, let it settle into a small ball. Cure for 30 Seconds LED or 2 Minutes UV. Be sure to slowly turn the implement while curing or the gel will lose its roundness.
5. Repeat steps 3-4 until the desired effect and size is reached.
6. Apply **Essential Seal** and cure in the **Dual Cure Lamp** for 30 seconds in LED or 2 minutes in UV. Remove the tacky layer with a **Nail Wipe** saturated in **Cleanse**.
7. Remove the ball from your pin and file the back of the ball flat so it sits on the nail.
