

CREATING YOUR OWN 3D ART GELS

1. Using the **Simplicité Acrylic Powder – Little White Lies** ^{*} and Glaze'N Go or your favorite Tack Free Gel Topcoat , mix together to make a paste consistent to icing.
2. Using the **NSI HD Detailer Brush** collect the **Design Gel** mixture and create 2 “commas” cupping each other and freeze in an LED Lamp for 10 seconds.
3. On either end of the “commas” create a boomerang shape around the “commas”. Start in the center to place the bulk of the product and slowly move to the side to create fine edges.
4. Add a second coat of the mixture to the already cured commas to create a 3D effect . if needed and freeze in the LED Lamp for 10 seconds.
5. On either ends of the boomerangs create a larger boomerang shape around. Start in the center to place the bulk of the product and slowly move to the side to create fine edges. Add a second coat of the mixture to the already cured boomerang to create a 3D effect if needed and freeze in the LED Lamp for 10 seconds.
6. Bulk up the second layer of the boomerang and freeze in the LED lamp for 10 seconds. You can continue adding height to the flower until you achieve the look you would like, then cure in a full hand LED lamp for 60 seconds. |

Check that your design is smooth and refine it ; buff to a smooth finish to the touch, if needed.

Leave to a matte finish (if buffed) or Topcoat your design with Glaze'N Go or your favourite Tack Free Gel Topcoat if a more glossy shine is desired.
