

GEL POLISH FRENCH APPLICATION WITH POLISH PRO

- 1. After shaping the free edge of the natural nail, gently push back and remove the cuticle with an orangewood stick or other implement.
- A gentle, light buffing using an Endurance 180/240 Grit Buffer to remove surface oils will improve adhesion. Clean and dehydrate the nail plate using a Nail Wipe saturated in Nailpure Plus.
- 3. Apply a thin layer of **Essential Base Coat** to all five fingers. Be sure to cap the free edges. Cure in the **Dual Cure Lamp** for 2 minutes in UV, or an LED lamp for 30 seconds.
- 4. Shake your choice of **Polish Pro Pink** well before use. Apply an even layer of colour. Cure in the **Dual Cure Lamp** for 2 minutes in UV or for 30 seconds in LED.
- 5. Shake your choice of **Polish Pro White** well before use. Remove the brush from the bottle and wipe the back side of the brush on the lip of the bottle, to remove some of the excess.
- 6. Brush onto the nail to create a smile line. Cure in the **Dual Cure Lamp** for 2 minutes in UV, or 30 seconds in an LED lamp. Repeat for full coverage.
- 7. Apply a layer of **Essential Seal**, sealing and capping the edges. Cure in the **Dual Cure Lamp** for 2 minutes in UV lamp or 30 seconds in LED. Remove the tacky layer with a **Nail Wipe** saturated with **Cleanse**.
