

FREQUENTLY ASKED QUESTIONS:

WHAT IS SIMPLICITÉ?

NSI has created Simplicité, a unique dipping system, that is a light cured oligomer based product. It is easy to use and apply and only dries when cured. The polybonded oligomers absorb the polymer, and then it is cured in a UV or LED light. Simplicité, because it is a gel based system, it is more flexible and feels lighter to the client.

HOW IS SIMPLICITÉ SYSTEM DIFFERENT THAN TRADITIONAL CYANOACRYLATE DIP POWDERS?

Dip systems are old technology but have become popular again. Traditional Dip systems use a resin, which is an adhesive, that is applied to the natural nail so the powder will stick to it. Our system uses a gel base that is odor free, making it a great addition to salons and spas.

WHY DO WE NEED IT?

It's the perfect product for the spa and beauty market. The odor-free Simplicité system can be used for natural nail and tip overlays, cutting traditional salon service time in half! It's the perfect enhancement addition to any salon and spa that is looking to add an easy, odor-free service.

EASY TO MAINTAIN

Another unique part of the Simplicité system is that the enhancements don't need to be soaked off regularly like traditional cyanoacrylate enhancements. A nail tech can maintain and rebalance the enhancements on a regular basis. The product does not need to be soaked off until the nail has reached the desired length. The technician can then resume gel polish application or re-apply Simplicité for added strength!

DO YOU HAVE TO SOAK OFF THE SIMPLICITÉ SYSTEM EVERY TIME?

No! Soak off removal is optional, you can just rebalance the service until the natural nail has reached the desired length.

HOW DOES IT WORK?

The beauty of the system is that this unique formula bonds to the nail, absorbs the polymer, and once cured, stays strong and durable. The Simplicité oligomers hug the nail like a polish for a strong bond. The super fine Simplicité Polymers are absorbed into the oligomer without losing the clarity or vibrant color of the powder. Techs can work on all 5 fingers at the same time because there is no dry time, allowing for complete product control. Cure and buff. Voilà, you have a strong nail enhancement!

PERFECT FOR ACTIVE CLIENTS

What happens when your client breaks a nail or the gel polish isn't strong enough for clients that are heavy on their hands? This is where Simplicité comes in. It's easy, light, fast, durable, and it doesn't feel like an enhancement. Plus it's odorless! Perfect for the manicure clientele that do not like the tight, heavy feeling of acrylics and gel enhancements.

LOVED BY BOTH CLIENTS AND TECHS

[NAIL TECHS LOVE IT](#) - They have increased their revenue without the added stress of creating enhancements, filing and removal. Completing a PolyDip service on natural nails only adds 5 minutes to a traditional Gel Polish application and puts more money in the Tech's pocket. Tip and Overlay services using Simplicité can be completed in less than a half an hour! PLUS: The product is thin enough that it can be removed in half that time.

[CLIENTS LOVE IT](#) - Clients love walking away with beautiful lightweight feeling nails that look just like traditional enhancements. The Polydip enhancements don't have the same tight, heavy feeling of acrylics and gel enhancements.

Simplicité PolyDip System - Oligomer Technology and fits between the permanent polish market with Polish Pro Gel Polish and nail enhancement services like Attraction or Balance. The Simplicité PolyDip System is a whole new level of nail dipping systems. The unique light cured technology is faster than a traditional dip service and keeps client's nails strong and healthy. With the new Simplicité PolyDip System, you can work on all 5 fingers at the same time because there is no dry time. This odorless system can be used for natural nail and tip overlays, and much more, cutting traditional salon service time in half! It's the perfect addition to salons and spas that are looking to add an easy to use odorless service.
