## THICK TURRET

---

### WHY SUCE?

---

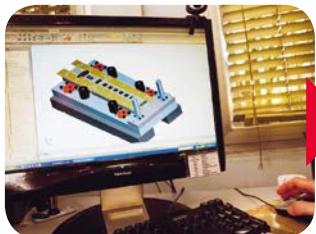

The use of double grinding wheel plants allows for a very low roughness coefficient.

The machine tooling dept. includes automatic lines of turning with load bars and milling machines.

10,000 items available in stock divided into 20 different categories

Thanks to our project department, with 3D CAD stations, we are able to design both standard and special tools.

No shape limitation thanks to EDM technology.

The use of the best steel available on the market by SUCE tools ensures a high standard quality and a long tool life.

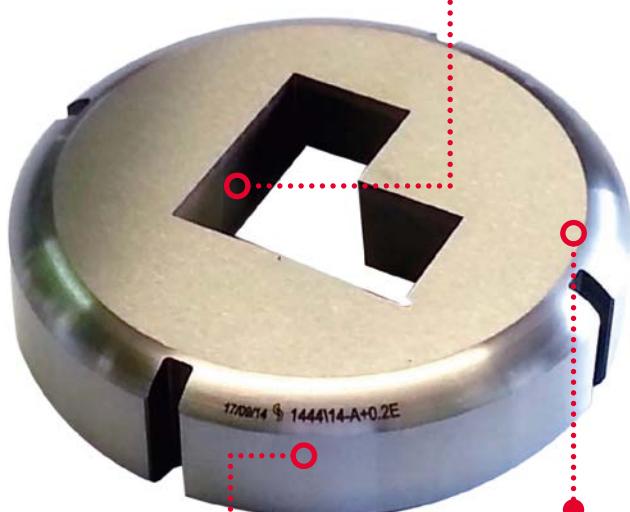

No shape limitation thanks to Wire EDM technology.

Different lock-slug systems available

Wire EDM load-unload cell.

In warehouse:  
ready for delivery.

SUCE special ID number.

Tool testing: fault free.

Manufacturing execution system.

# THICK TURRET

## DIE CLEARANCE

Die clearance is the total space between the die and the punch.

A correct clearance between the punch and the die ensures normal wear of the tool and punching without defects such as: burrs caused by excessive clearance and premature wearing of the tool and increased punching force in the case of clearance being too small.

MATERIAL				
Thickness mm	Mild steel 16-20%	Stainless steel 18-24%	Aluminum 12-16%	Copper 10-14%
0.5 – 0.6	0.08-0.1	0.1-0.12	0.06 – 0.08	0.05 – 0.06
0.8	0.14 – 0.16	0.15 – 0.2	0.1 – 0.14	0.08 – 0.1
1	0.16 – 0.2	0.18 – 0.24	0.12 – 0.16	0.1 – 0.14
1.2	0.2 – 0.24	0.24 – 0.3	0.15 – 0.2	0.12 – 0.15
1.5	0.25 – 0.3	0.27 – 0.35	0.18 – 0.24	0.15 – 0.2
2	0.34 – 0.4	0.36 – 0.45	0.24 – 0.3	0.2 – 0.25
2.5	0.45 – 0.5	0.45 – 0.55	0.32 – 0.35	0.25 – 0.3
3	0.5 – 0.6	0.6 – 0.7	0.35 -0.45	0.3 – 0.4
4	0.65 – 0.8	0.7 – 0.95	0.45 – 0.6	0.4 – 0.55
5	0.85 – 1	0.9 – 1.15	0.6 – 0.8	0.55 – 0.65
6	0.95 – 1.2	1.1 – 1.4	0.75 – 0.95	0.7 – 0.85

In case of blanking mild steel and stainless steel, clearance is 15% of material thickness.

In case of blanking aluminum and copper clearance is 10% of material thickness.

System E :3 cuts with different angles ensures the locking of the slug.

Lock slug AS best option when thickness > 3 mm.

## DIES LOCK SLUG

SUCE lock slug dies eliminate slug pulling. Slug pulling occurs when the slug returns to the top of the sheet during the stripping portion of the punching cycle. Because of this the slug comes between the punch and the top of the sheet on the next cycle, causing damage to the part and the tooling. How to avoid this problem?

The SUCE NO-SLUG has been designed with a reduction point of the shape below the surface so the slug cannot return once it passes through this point.

Once the slug is separated from the punch, it is free to fall through the die. Slug pulling is eliminated.

This solution isn't suggested with slug exhaust system machines ; AS lock slug design with protrusions is best solution with thickness more than 3 mm, minimum cl for AS system is 0.15 mm.

SUCE Lock slug E and A system is a standard for all Suce dies, AS is on request, reduced land is a standard for thick turret dies rt80x5 rt80x6 rt110x5 rt110x6.

## TOOLS SHARPENING

Before starting, make sure that punch and die cutting edge are in perfect condition. Accurate maintenance of the tools guarantees a normal wearing and the result of punching will be without residual burr and defects. Regular sharpening of the 0.1 mm punch and 0.2 mm die guarantees a constant life time of tooling.

It is preferable that grinding operation is made with tangential grinding machine with adequate cooling in order to avoid tool tempering; after grinding it is necessary to demagnetize the tools with an appropriate demagnetizer. If a urethane ejectors is applied, restore the initial hole depth in such a way that the ejector can be compressed.

## PUNCHING FORCE

Before starting ensure that punching force doesn't exceed the capacity of punching machine.

In order to calculate the punching force in kg, use the following formula:

**Perimeter of the shape (mm) x thickness (mm) x 4/5 x shear strength \***

\* mild steel 40 - 50 kg/mm<sup>2</sup> stainless steel 60 - 70 kg/mm<sup>2</sup> aluminium 20 - 25 kg/mm<sup>2</sup>

A sharpening other than the flat one reduces both punching stress and punching noise.

Therefore to ascertain the true punching force, multiply the pressure calculated using the above formula by the **sharpening factor**:

Sharpening height	Thickness (mm)					
	1 - 1.5	2	3	4	5	6
1	0.75	0.9	1	1	1	1
1.5*	0.5	0.6	0.7	0.95	1	1
3**	0.5	0.5	0.5	0.6	0.7	0.75

\* standard shear height thick turret style

\*\* standard shear height Trumpf style

**Double valley**  
Cod 3P

**Roof top**  
Cod V

**Inverted roof top**  
Cod VR

**Whisper**  
Cod W

**Four ways**  
Cod 4P

Best option when shape is long, but susceptible to breakage

Best option when punching force is high, punching surface 75%

Best option for nibbling but inverted stresses could cause breakage

Recommended only for blanking (turret machine)

Recommended for round and square

**PUNCHES ARE FLAT, ABOVE SHEAR ARE AVAILABLE UPON REQUEST;  
EACH TYPE OF SHARPENING REDUCES NOISE UP TO 50%**

# THICK TURRET

## COATING

### PROBUS

PROBUS ALCRN coating , features a unique nanostructure for a substantial decrease of internal stress; is tailored to withstanding cutting temperatures of up to 1050° C.

A distinguishing feature of PROBUS coating is the improved wear performance at the cutting edge of the tool. Uniform distribution of mechanical forces in the vicinity of the cutting edge provides an additional advantage. This property puts PROBUS ahead of other coatings, making it excel in applications where similar AlCrN coatings provide only modest lifetime improvements.

STRUCTURE	Micro Hardness (HV 0.05)	Friction coefficient (100 cr6)	Thickness (micron)	Deposition temperature (°C)	Max temperature (max°C)	Colour
Multilayer	3.000	0.5	2 - 4	450 - 500	1050	Grey

### GEMINUS

The double coating is obtained by overlaying the traditional TiCN with Movic self-lubricating coating. The TiCN coating comes from an evolutionary study of the precursor TiN, inheriting the already appreciated qualities and improving some of its features.

In fact, thanks to the introduction of the Carbon (C) within the layer, it was possible to obtain a structure that has a hardness greater than 50% compared to that of TiN.

In consequence to this, the TiCN coating ensures a higher wear resistance.

A further improvement of the TiCN was achieved by developing a “multilayer” (multi-layer) composed of several hundreds of different layers that give better control of structural stress within the coating. MOVIC is a self-lubricating and anti-adhesive coating based on MoS2 (Molybdenum), which is produced by PVD sputtering Magnetron technology. MOVIC has been developed in the aerospace to find alternatives to traditional oils (eg oil, grease) when their use is not permitted and it has shown excellent tribological features that made it very interesting for a variety of new applications.

STRUCTURE	Micro Hardness (HV 0.05)		Friction coefficient (100 cr6)	Thickness (micron)	Deposition temperature (°C)	Max temperature (max°C)	Colour
Single layer	-		<0.1	1	<150	-	GREY
BASIC COMPOSITION	Coating Structure	Microhardness (HV 0.05)	Coefficient of friction against (100 cr6)	µm thickness (microns)	Deposition Temperature (°C)	Max Temperature of use (max ° C)	Colour
Titanium carbonitride	Multilayer	3.500	0,5	1- 3	350 - 480	350	Pink

### LEVATUS

DLC is an innovative carbon-based coating with wide spectrum of application which allows you to deal with problems related to abrasion, to chemical attack and sliding.

The low deposition temperature , the hardness and the low coefficient of friction make it of extreme interest. It is applied on finished parts while maintaining the state of the surface finishing.

The DLC is deposited by the PA-CVD (Plasma Assisted – Chemical Vapour Deposition) technology which allows to maintain low temperature of depositing and at the same time ensures an excellent adhesion.

BASIC COMPOSITION	Deposition Technology	Microhardness (HV 0.05)	Coefficient of friction against 100 Cr 6	µm thickness (microns)	Deposition Temperature (°C)	Max Temperature of use (max ° C)	Colour
a-C:H sp2-sp3	PA-CVD	1.500 - 3.000	0,05 - 0,1	0,5 - 3	250	350	Black

COATING	COPPER	ALUMINUM	MILD STEEL	GALVANIZED STEEL	STAINLESS STEEL
PROBUS	X	X	X	XX	XXX
GEMINUS	XX	XX	X	XXX	XX
LEVATUS	XXX	XXX	X	X	X
NEEDLESS	RECOMMENDED		HIGHLY RECOMMENDED		
	X	XX	XXX		

## BEST TOOLS CAN ONLY BE FORMED OUT OF THE BEST STEEL

Tool users has been demanding higher and higher standards of their tools to prolong service life and reduce costs; the tool material itself, in addition to the tool design, is a success factor which is often under-appreciated. It can significantly influence the tool life and therefore the cost effectiveness of your production.

For each of the demands of blanking and cutting, Bohler has an optimal solution in its product range. The range contains everything from standard materials to high-performance powder metallurgical steels.

LINE	TRUMPF	THICK TURRET	SALVAGNINI	MURATEC
PUNCH SIZE 0	HSS / PSM	-	-	-
PUNCH	ISODUR / PSM	ISODUR / PSM	ISODUR / PSM	ISODUR
INSERT BLADES	HSS / PSM	HSS / PSM	-	-
DIE	HWS / ISODUR	HWS / ISODUR	ISODUR / PSM	HWS

### HSS - S600

M2 is the “standard” and most widely used industrial HSS. It has small and evenly distributed carbides giving high wear resistance, Tungsten-alloyed molybdenum high-speed steel with high hardness excellent cutting properties, outstanding compressive strength and good toughness.

### S600 Chemical composition

CARBONIUM	CHROMIUM	MOLYBDENUM	VANADIUM	TUNGSTEN
0.90 %	4,10 %	5.0 %	1,80 %	3.50 %

### D2 – K110

K110 is a high-carbon, high-chromium tool steel alloyed with molybdenum and vanadium characterized by: High abrasive wear resistance, High compressive strength, Good through-hardening properties, High stability in hardening and good resistance to tempering-back.

D2 steel is an air hardening, high-carbon, high-chromium tool steel. It has high wear and abrasion resistant properties. It is heat treatable and will offer a hardness in the range 59-62 HRC

### D2 K110 Chemical composition

CARBONIUM	CHROMIUM	MOLYBDENUM	SILICIUM	VANADIUM	MANGANESE
1.55 %	11.30 %	0.75 %	0.30%	0,75 %	0.30 %

# THICK TURRET

## ISODUR

A tough, "LONG DISTANCE RUNNER" with an optimum chemical composition

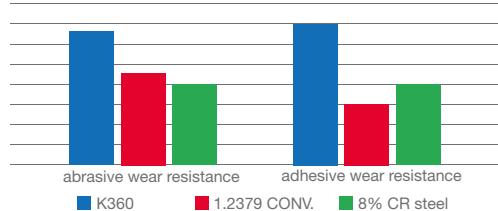

**ESR electro slug remelting:** a tried and tested remelting technology developed by Bohler gives the material the homogeneity it needs. A prerequisite for the best performance.

ESR Manufacture improved service life due:

- Least possible inclusion content
- Lower micro and macro segregation
- Good homogeneity and higher degree of purity
- A homogeneous structure throughout the entire cross-section and bar length
- Producing larger bar dimensions at a constant carbide distribution
- Uniform correction of dimensions
- A broad range of application due to a high degree of toughness

K360 Chemical composition	
Carbonium	1.25 %
Chromium	8.75 %
Molybdenum	2.70 %
Vanadium	1.18 %

### The tough, wear resistance allrounder

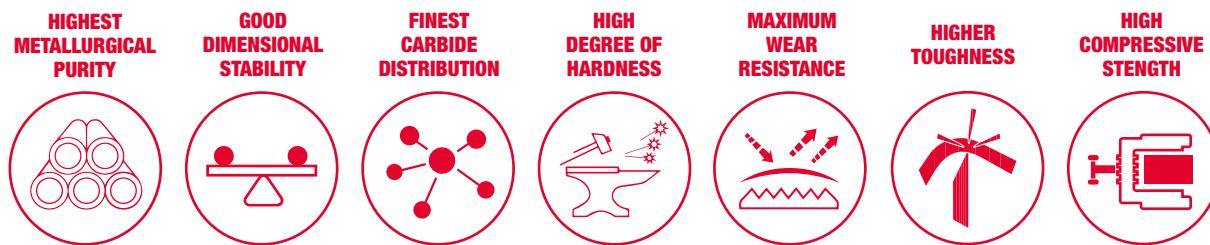

The new K360 isodur is a further development of the 8% chromium steels and has been developed to meet the needs of customers now more than ever.

High toughness and, a remarkably high compressive strength, together with good resistance make this steel a real problem solver.

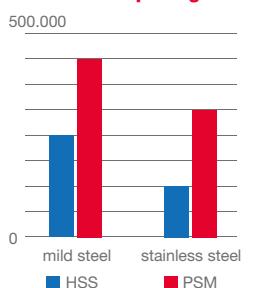

This steel is particularly outstanding when adhesive and abrasive wear resistance are necessary; it allows a considerable increase in performance, your productivity will increase and your costs per part will be reduced.

## POWDER STEEL METALLURGY

Today Suce provides, in addition to the traditional HSS punches, of new variety of tools, Trumpf style and Thick turret style made in powder steel metallurgical.

### The first sharpening

Graphic shows nr of hits before first sharpening punching mild and stainless steel with HSS and PSM tool. Tool tested square 6mm

### One of them is K490.

Research shows that the **K490 Microclean**, thanks to its chemical composition, is the best steel in the punching market. If you compare it with other powder steels, for example M4 and PM23, you will find that it assures twice the toughness with the same wear resistance.

### K490 Chemical composition

K490 Chemical composition	
Carbonium	1.40 %
Chromium	6.40 %
Molybdenum	1.50 %
Vanadium	3.70 %
Tungsten	3.50 %

This new material is characterized by:

- **A high adhesive and abrasive wear resistance**  
More hits between regrind operations increases tool life, wear resistance double than traditional HSS M2
- **A high toughness** reduces risk of breaking the punch.

### CPOH plus Chemical composition

CPOH plus Chemical composition	
Carbonium	1.0 %
Chromium	8.0 %
Molybdenum	2.50 %
Vanadium	0.3 %

In the catalogue POWDER STEEL PUNCHES are marked in RED, available items:

## GENERAL RULES THICK TURRET TOOLING

In order to optimize the use of tooling we would recommend the following basic guidelines:

- a) the punching surface must not be lower than 60% of the used punch surface, isn't recommended to punch the edge of the sheet less than 2.5 times material thickness;
- b) in case of nibbling, minimum feed must be  $0.5 \times$  thickness, smaller round punch with thickness 1 mm is 4 mm, smaller round punch with thickness 2 mm is 6 mm, smaller round punch with thickness 3 mm is 8 mm;
- c) before exceeding tons capability calculate punching force with formula on page 5;
- d) the tool dimension must not be lower than the material thickness and the shorter side must be at least 5% of the longest side;
- e) the advantage of the technical improvements of some models of dies punching penetration should be at least 2.5 mm;
- f) slitting tools must be appropriately sharpened;
- g) the use of the steels commonly called High Speed Steel for our punches allows the punching of any steel. However, in order to considerably increase the punching effectiveness and reduce cold welds, apply some type of coating, see pag. 10 and use oil lubricant on sheet surface;
- h) ensure that tooling cutting edges are without seizing or cold welding material; if any, remove them with a diamond file;
- i) radius on punch corner is 0.25 mm, constant radius on the corner of the dies ensures proper wear and a uniform burr;
- j) delivery time trumprf and thick turret tooling: 2/3 days standard, 5/7 coating tools, some items are available in stock;

### LOOK AT THE COLORED SYMBOL AND CHOOSE THE PROPER A AND B PUNCH HOLDER

It takes long time to assembly and disassembly.

Pack spring assembly allows to save time , after adjusting the punch at the right length tighten the screw with an allen key.

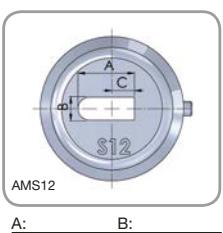

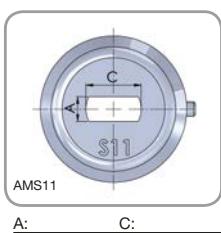

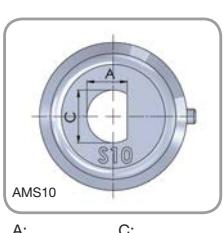

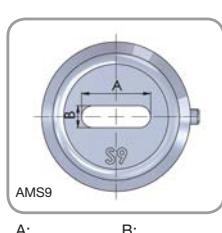

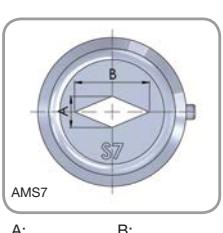

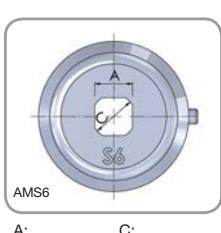

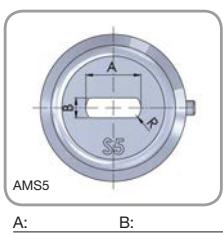

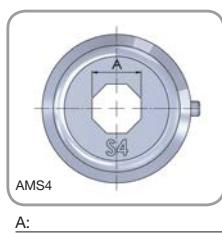

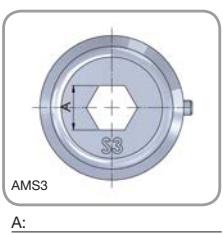

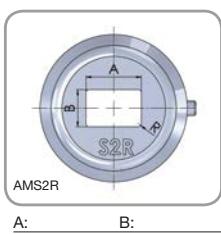

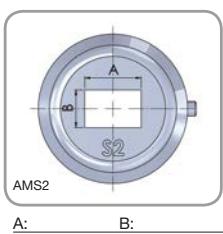

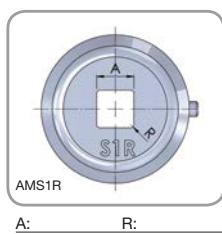

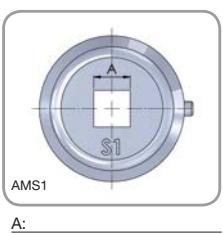

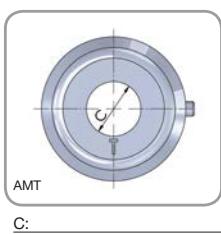

Best option to save time , pack spring assembly and button on the punch holder allow to adjust and lock the punch while assembly.
