Customization Capabilities

Build-to-Order

100's Standard Models

- **Most common pre-configured designs , built on demand**
- **2- week production lead-time**

Configure-to-Order

1,000's Semi-Custom Models

- **Quick-turn custom configured versions of BTO**
- **Pre-configured part numbering, charted drawings, and contract pricing for on-demand, zero-touch order processing**
- **Options for custom plug, cord, orientation, chassis color**
- **2-3 week production lead-time**

Engineered-to-Order

Unlimited Configuration Options

- **Utilize library of common sub-assemblies & family compliance for quick ETO turn-around**
- **Full customization capabilities form factor, outlet counts , colors, circuit breakers, etc**
- **3-5day turn for quote , drawing, and specification**
- **week production lead time for many ETO orders**
- **ETO SKUs transition to BTO after first order**

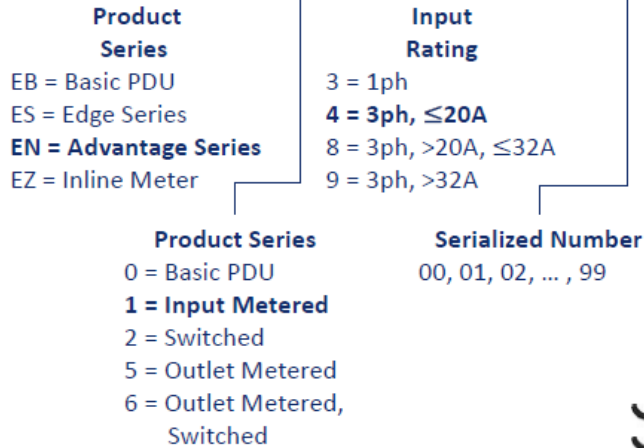

CTO Example

Outlet Modules & Configurations

EN1.0 Series-
switched 8 Outlet Block

EN2.0 Series-
switched 8 Outlet Block

EN2.0 Portfolio

Standard portfolio (2 2-3wk production lead lead-time)

- 46 Vertical PDU SKU's (16A, 32A)
- 6 ILM's (Inline Energy Meters 16A, 32A, 63A)
- Engineer to Order portfolio (5 5-6wk production lead lead-time)
- Configure-to-Order, 1200+ quick configurations
(based on the many SKU's made for OEM and Enlogic customers)

EN2.0 Outlet Series

- Higher Density
- Better Outlet Configuration
- All PDU's will fit 42U racks

Locking Outlets & Cords

- **Enlogic Locking Cords**

- Fit both 1.0 & 2.0 Models
- Standard colours
- Black, Blue & Grey
- Other colours & lengths available
- Standard Lengths
- 0.6m / 1.2m / 1.8m

Color Coded Circuit Breakers & Receptacles

Easily identify critical outlet wiring combinations with colour coded receptacles and magnetic circuit breakers

HIGH-TEMP RATED
60°C

Outlet level Comprehensive Measurements:

Voltage, Current, Wattage, kW, kWh (energy), power factor

Designed for High Temperature

Safe, Reliable Operation
at Full Load Rating

± 1%
REVENUE GRADE

Color Chassis Options

* Other RAL colours available on request

Environmental Sensor Support

Integrated rack management features eliminates need for secondary systems

Plug & play style digital sensors are factory calibrated with self-identifying electronics design. Digital style allows shortening or lengthening of input cord length using standard ethernet cable and included coupler.

Analog-to-digital chip allows customisable length with no signal degradation

Up to 8 sensors per PDU

- Temperature
- Temperature + Humidity
- 3x Temp + Humidity
- Rope leak
- Spot leak
- Door open/close sensor
- Airflow velocity
- HID/Proximity Security Access Handle

Sensors are compatible with EN1.0 & 2.0 PDU's

For consistency and ease of operation

Electronic HID Security Access

RFID Series

- *Single ethernet cable connection to PDU for power & data*
- *Combo Antenna (HID, EM & MIFARE)*
- *200 locally stored credentials*
- *500 local events logged*
- *Remote firmware upgrades*

Configurable/Lock Status
LED

User Replaceable
Euro Style Override Lock

RFID/Keypad Series Dual Factor Authentication

10-digit PIN Style
Keypad

EN2.0 Network Management Card

Power Source Color Coding

POWER SOURCE COLOUR FOR ALL USERS

- Standard design feature, no long lead time/special colour order codes
- User selectable seven (7) colour code border (for source identification)
- Distinctive Contrast
- No Extra Cost to Implement

Edit

64x Daisy Chain Testing

64 PDUs • Single Ethernet IP Address • DNA Enabled

EN2.0 Series

- Ethernet Cascading
- Standard ethernet cable between units for easy cabling
- Single IP address for up to 64 units
- Redundant Network Access Available

Enlogic Sequential Start Up

Why do we need Sequential Start Up?

If you have multi-power installations, you need fast and secure start up sequences.

Non-switched PDU's draw power from the mains supply in one surge, this potential huge draw on the power supply can cause potentially damaging surges and cause outages which can cause major downtime.

Enlogic offer Sequential Start Up on our EN6000 NE & 2000 Advantage Series PDU's helping you to reduce total in-rush currents to a minimum. By setting the on/off position of each socket and also setting a timed delay on each outlet you can reduce the initial power draw and also the timing of when your equipment will get powered. The more installations you have, the greater the benefit Enlogic Switched PDU's can have on your network.

EN Series 1U & 2U Horizontal PDU's

- Available in 4 options
- Overall Metered, 16A & 32A options
- Switched Outlet 16A & 32A options

- Power & Energy Metering (V, A, VA, W, Kwh, PF) to 1% billing grade accuracy

- Daisy-chain up to 4 Horizontal PDU's with environmental monitoring, with support for up to 8 sensors

- Vertical Hot Swappable Network Management Card

± 1%
REVENUE GRADE

- Locking IEC receptacles provide secure power connection with optional Locking Cords

EZ Series-InLine Meters (ILM's)

Rewireable input cord

High Accuracy, billing-grade power metering
(Includes V, A, VA, W, pf, kWh)

Large, high visibility OLED display
with localised language options

Bracketry available for Zero U, 1U or outside of the rack-space installation

Environment monitoring ready with up to 8x plug and play probes and sensors

Full featured network management and alerts including HTTP, HTTPS, SSH, Telnet, SNMP, FTP

- Inline Energy Meters (EZ Series), real time input circuit level monitoring solution for adding network monitoring to basic PDU's or stand alone equipment
- The EZ series boasts billing grade power and energy metering and can connect EN Series sensors for complete threat detection and notification

Providing intelligence to unmonitored equipment

Tool-less Rack Mounting System Enlogic

Rittal / HP Bracket
EA9120

APC / Right Angled Bracket
EA9121

Universal Bracket
EA9122

Enlogic brackets allow for easy access into any manufacturer rack to best position your rack PDU within your cabinet

PDU Warranty

**2.0 now
comes
with a
5 Year
Warranty**

And comes with complete technical back up and support
from the UK

EN2.0 Series PDU Features

5 Year Warranty
Full technical support on all EN2.0 products

Designed for High Temperature
Safe, Reliable Operation at Full Load Rating

HIGH-TEMP RATED
60°C

Hot Swappable Colour Coded Network Card
For easy maintenance and upgrade-ready

Dual Network Access
Network Redundancy solution for Mission critical applications

Locking IEC Outlets
Provide secure power connection with optional locking cords or integrated locking features

Power and Energy Metering
(V, A, VA, W, kWh, pf)

Premium Hy-Mag Circuit Breakers
5kAIC standard, 10kAIC optional

Industry Leading Low Profile Design
Industry leading design saves rack space and ensures good access

Color Coded Outlets & Circuit Breakers
For easy source identification

Tool-less Mounting System
For easy fitting into racks

Best-in-Class Billing Grade Accuracy
Certified ISO/IEC 62053-21 across full range of operational spec

64x PDU Cascading
Industry first for bi-directional 64x PDU daisy chain, including DC Power Sharing

Competitor PDU's

סדרת Enlogic PDU

סדרת EN2.0 מביאה איתה המון יתרונות וממקמת את ה PDU של אנלוג'יק כמוצר מוביל ומועדף בכל חוות שרתים.

- חלוקה לצבעים שונים על גבי ה PDU לטובת זיהוי קל של חיבורים שונים וניתוק ציוד המחובר לאותו צבע על ידי מפסק
- טמפרטורת עבודה עד 60 מעלות
- שקעים מותאמים לכבלי נעילה לטובת אבטחה וללא ניתוק
- חלוקת השקעים מסודרת בצורה כזו שמגבירה את השרידות
- תצוגת LED של התראות קריטיות כגון נפילת מתח, תקלה בשרשור, התראה של אחד מהרגשים
- התצוגה היא אינטראקטיבית וניתן לבצע שינויים בלחיצה על מסך המגע
- כניסת USB לטובת עדכונים מקומיים, הוספת רגשים, והוספת אביזרים עתידיים.
- 2 כניסות רשת, האחת במהירות ג'יגה לטובת ביצועים מהירים – יותר והשנייה לשרשור ולשרידות לחיבור מקור נוסף
- 2 כניסות לרגשים - ניתן לחבר עד 8 סנסורים
- החלפה חמה של המוח ללא צורך בכלים - במידה וישנה תקלה, ניתן להחליף את המוח בלבד ללא ניתוק כלל ה PDU והשבתת חדר השרתים.
- פטנט בלעדי של אנלוג'יק, ניתן להגדיר צבע תצוגה שונה מתוך 7 צבעים אפשריים ובכך לזהות את מקור המתח המחובר ל PDU.
- ניתן גם להזמין את המוצר בצבעים שונים, בהזמנה מיוחדת

אדוויס אלקטרוניקה בע"מ

Monitoring scenarios

ENLOGIC PDU Series Management Tools & Features

PDU connectivity Protocols:

- **Serial**
- **HTTP/ HTTPS**
- **Telnet/SSH**
- **SNMP**
- **JSON, Redfish API, and others**

Advanced Security Features:

- **Strong encryption**
- **Passwords Management**
- **advanced authorization options including LDAP and Active Directory**

ENLOGIC PDU Series Management Tools & Features

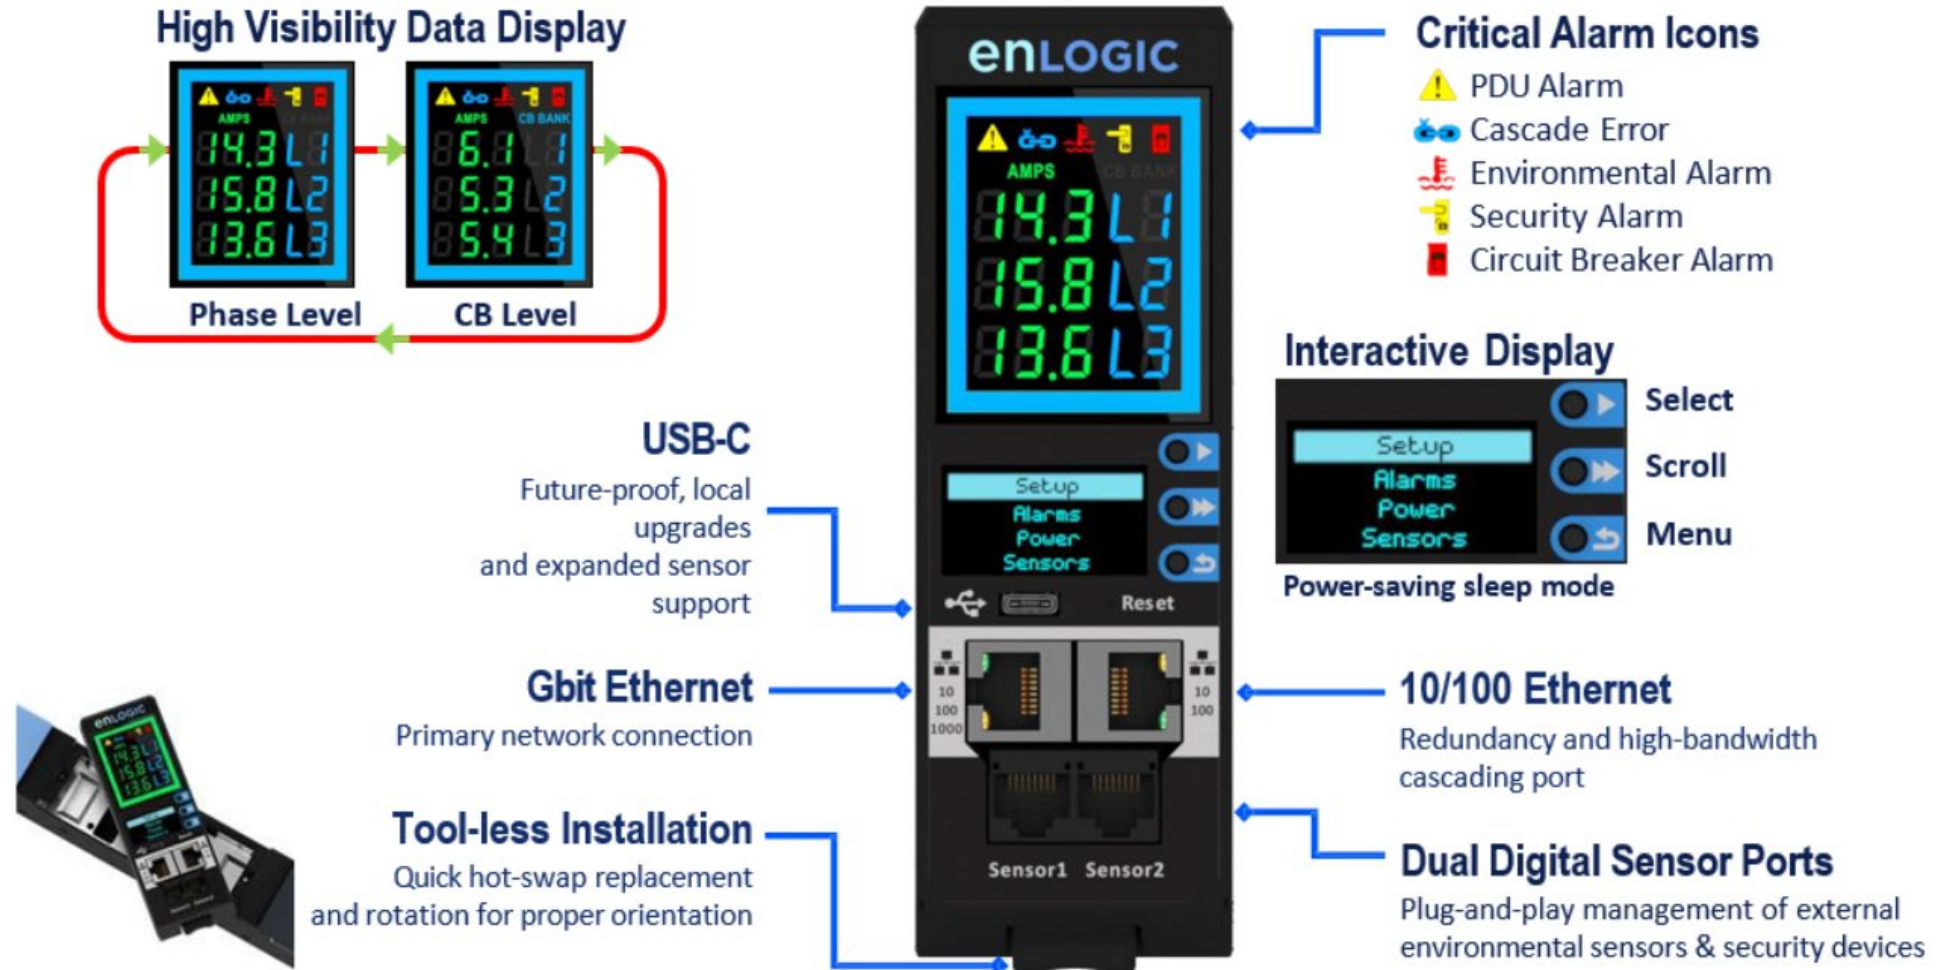

- **NMC- Network Management Controller**
 - ניהול מקומי (On-Premise)
- **LAN Based Management**
 - PCT tool
 - (מקומי או מרוחק SSH/ GUI) ניהול מבוסס רשת
- **Remote Monitoring**
 - ממשקים ופרוטוקולים
 - חיבור למערכות שו"ב

NMC: Network Management Controller

- Features
- Ethernet Cascading
- DC power Sharing
- On-Premise Management

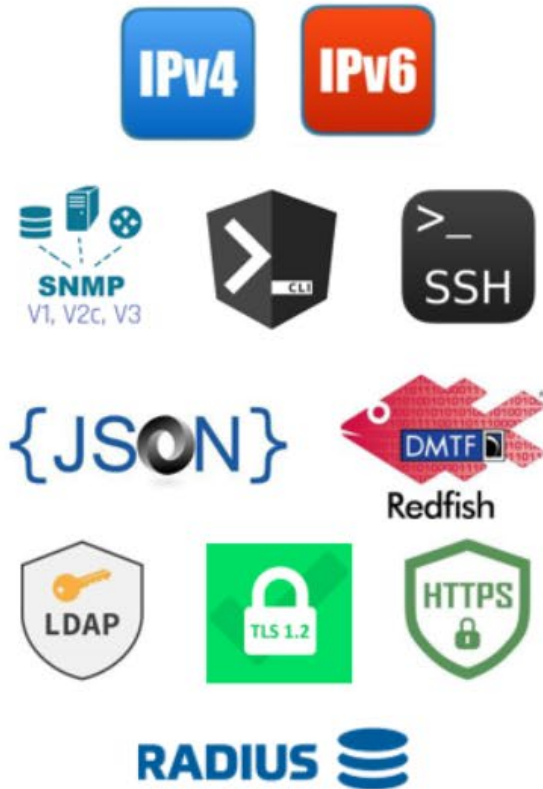

EN Series Network Management Card

EN Series Network Management Card

Remote Connectivity

Processor Power

DNA

Dual Network Access (DNA) in 2N configuration for tenant/client applications

Mobile Display

React

High Accuracy

Best in-class billing grade accuracy (IEC62053-21) at full power and across the whole range

Ethernet Cascading

- Simplifies Connectivity & Access
 - Use simple Ethernet cable
 - Up to 64PDUUs
 - Single *or* Redundant Ethernet IP Address
 - DNA Enabled *or* RNA Enabled
- **DNA (Dual Network Access):** Typically used for separate access to the same device (client access for billing and monitoring)
 - **RNA (Redundant Network Access):** Typically used on a 2N network redundancy

64x Daisy Chain Testing

DC Power Sharing (over Cascade)

POWER SOURCE A

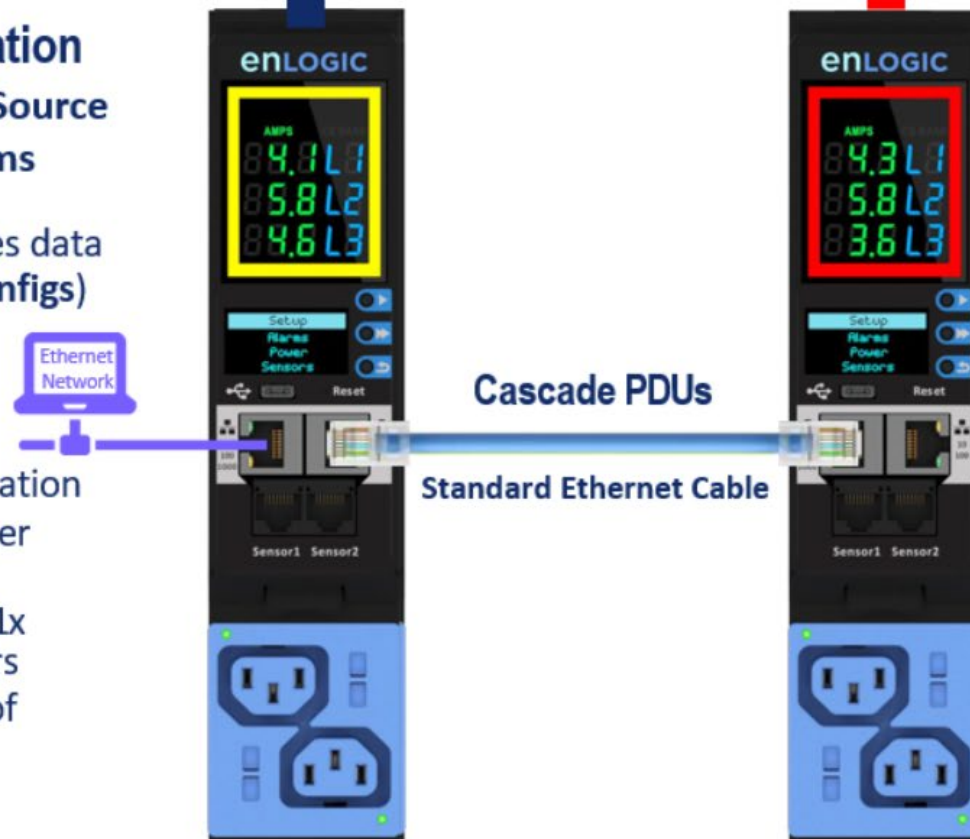

AC POWER A = ON

POWER SOURCE B

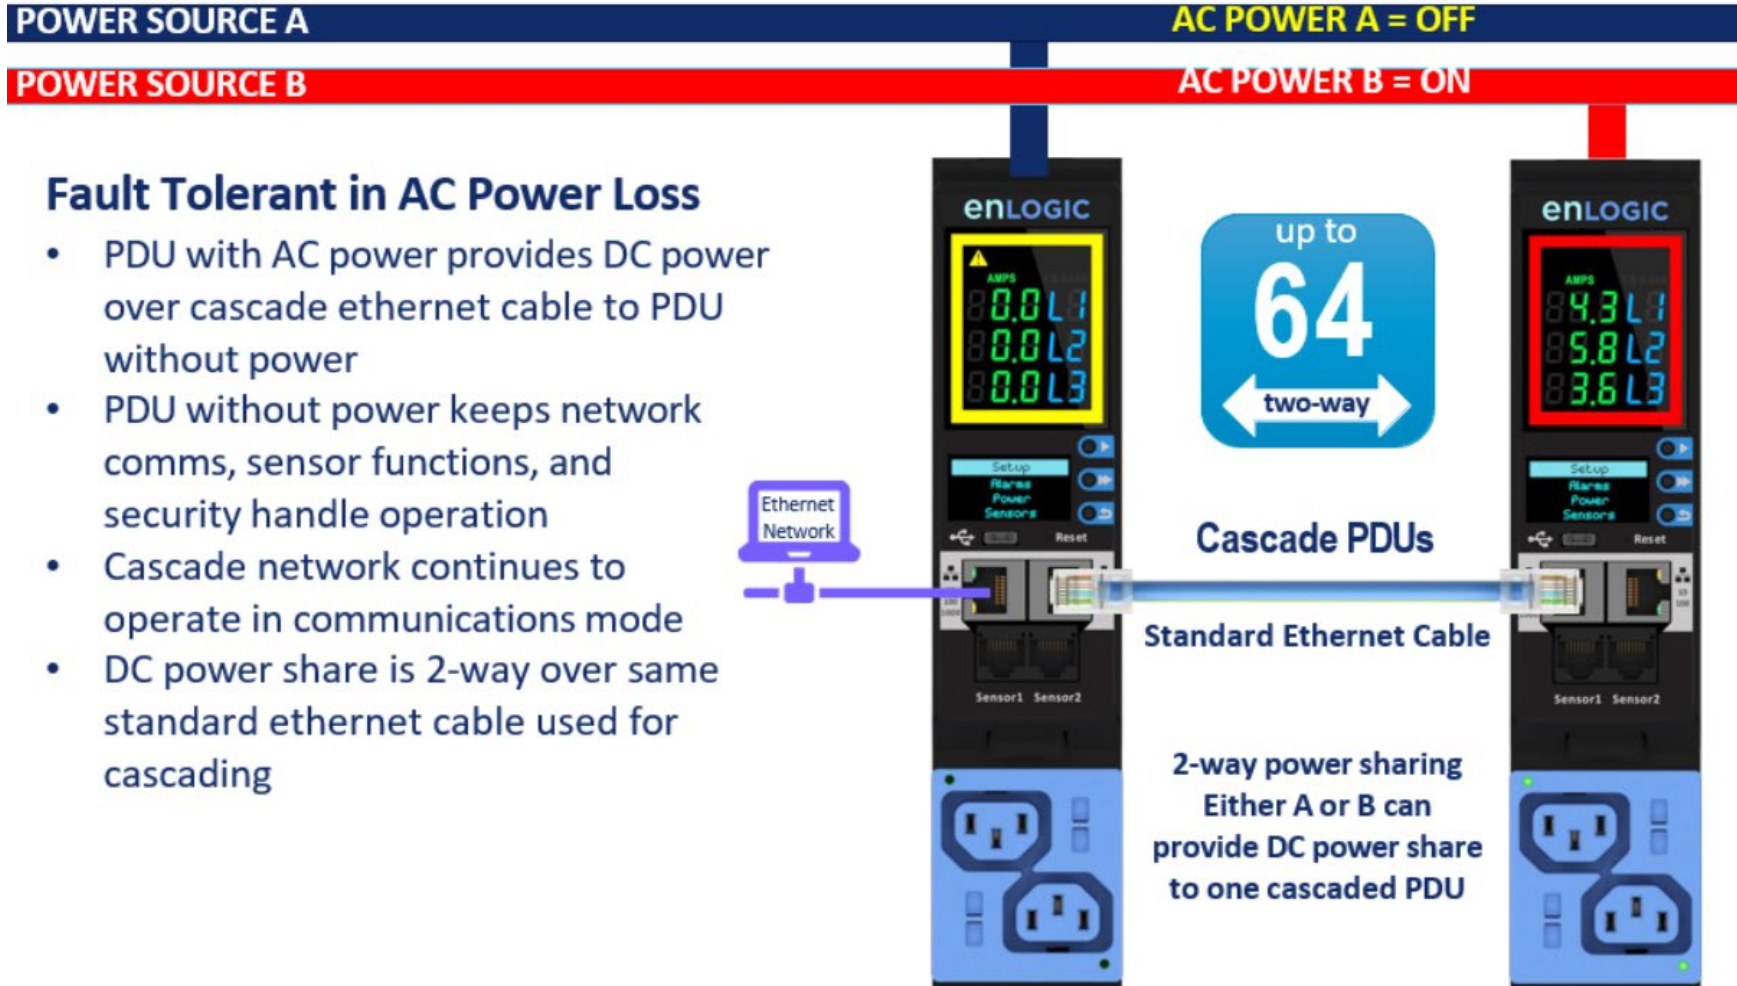

AC POWER B = ON

In Normal Redundant Power Operation

- PDUs receive power from input AC Source
- Cascading simplifies network comms
- Single, standard ethernet cable provides data and power sharing (no special cable configs)
- Can work with any daisy chain configuration
- Each powered PDU can provide DC power for 1 adjacent PDU
- DC power share can support NMC plus 1x handle per PDU and 6x standard sensors
- DC power share does **NOT** keep relays of adjacent PDU in closed position

DC Power Sharing (over Cascade)

CLI: Serial / SSH

```

sys: system setting
usage:

```

CLI Commands Table

The following is a list of commands available in the CLI to execute. The commands are divided into 5 main categories: System setting (sys), Network configuration (net), User setting (usr), Device setting (dev) and Power (pwr).

Table 5: Sys Commands

| Sys Commands | Description | Example |
|-------------------------------------|--|---|
| sys date [yyyy-mm-dd] | Sets the user input date | EN2.0>sys date 2013-08-12 SUCCESS |
| sys date | Query on PDU date | EN2.0>sys date SUCCESS Date:2013-08-12 Time:04:58:16 |
| sys time[hh:mm:ss] | Sets the user input time | EN2.0>sys time 09:20:50 SUCCESS |
| sys time | Query on PDU time | EN2.0>sys time SUCCESS Date:2013-08-12 Time:09:20:53 |
| sys ntp [primary_ip] [secondary_ip] | Sets the NTP | EN2.0>sys ntp 129.6.15.28 129.6.15.29 SUCCESS |
| sys ver | Query on the system versions – firmware, web, boot loader and language version | EN2.0>sys ver SUCCESS Firmware Version: 1.0.6.1 Boot loader Version: 1.1 LANGUAGE Version: 1.01 Web Version: 1.0.5.8 |

List of CLI commands included in the manual

Serial RS232 via RJ45 –
Sensor port 1 is the serial port.
Ensure where serial is used that the allocation for sensors is adequate.

Serial cable has a unique pinout

ES Series Network Management Card

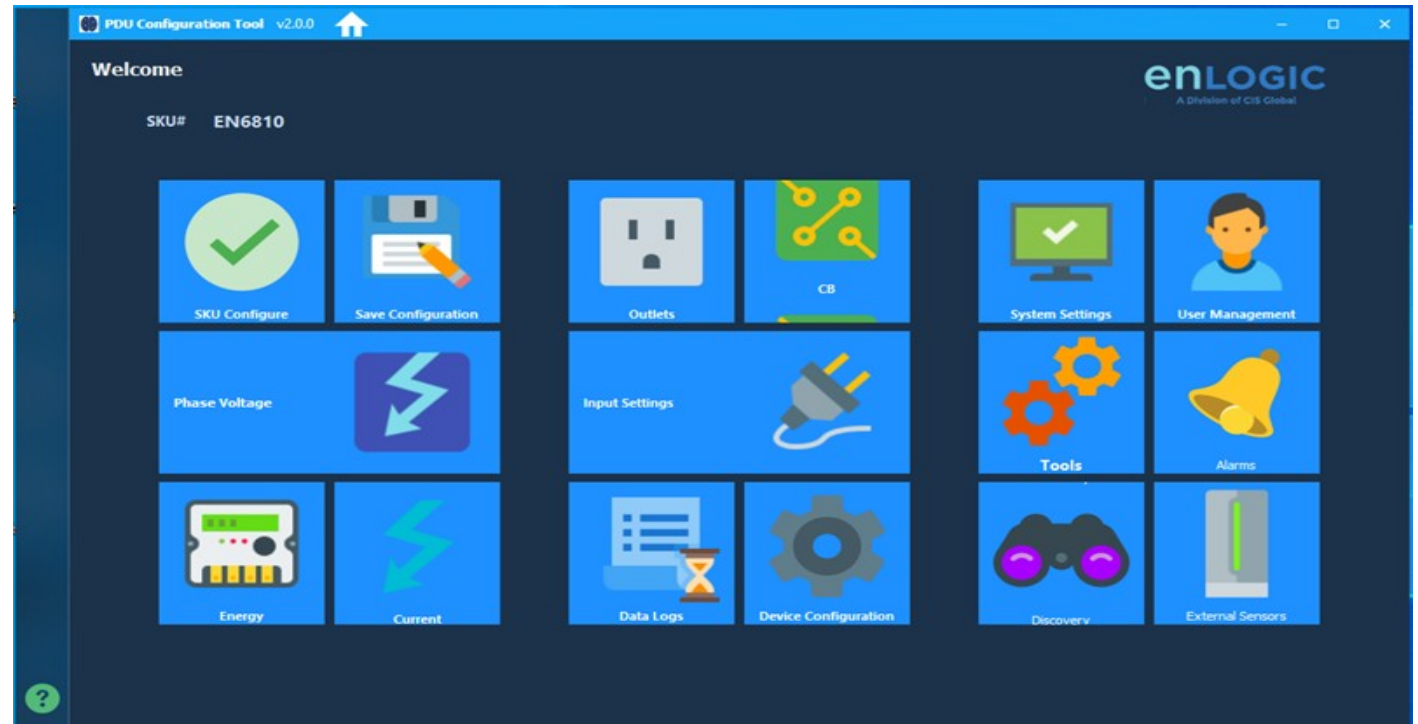

Network Based Management

- PCT Tool
- HTTP/ HTTPS
- SSH

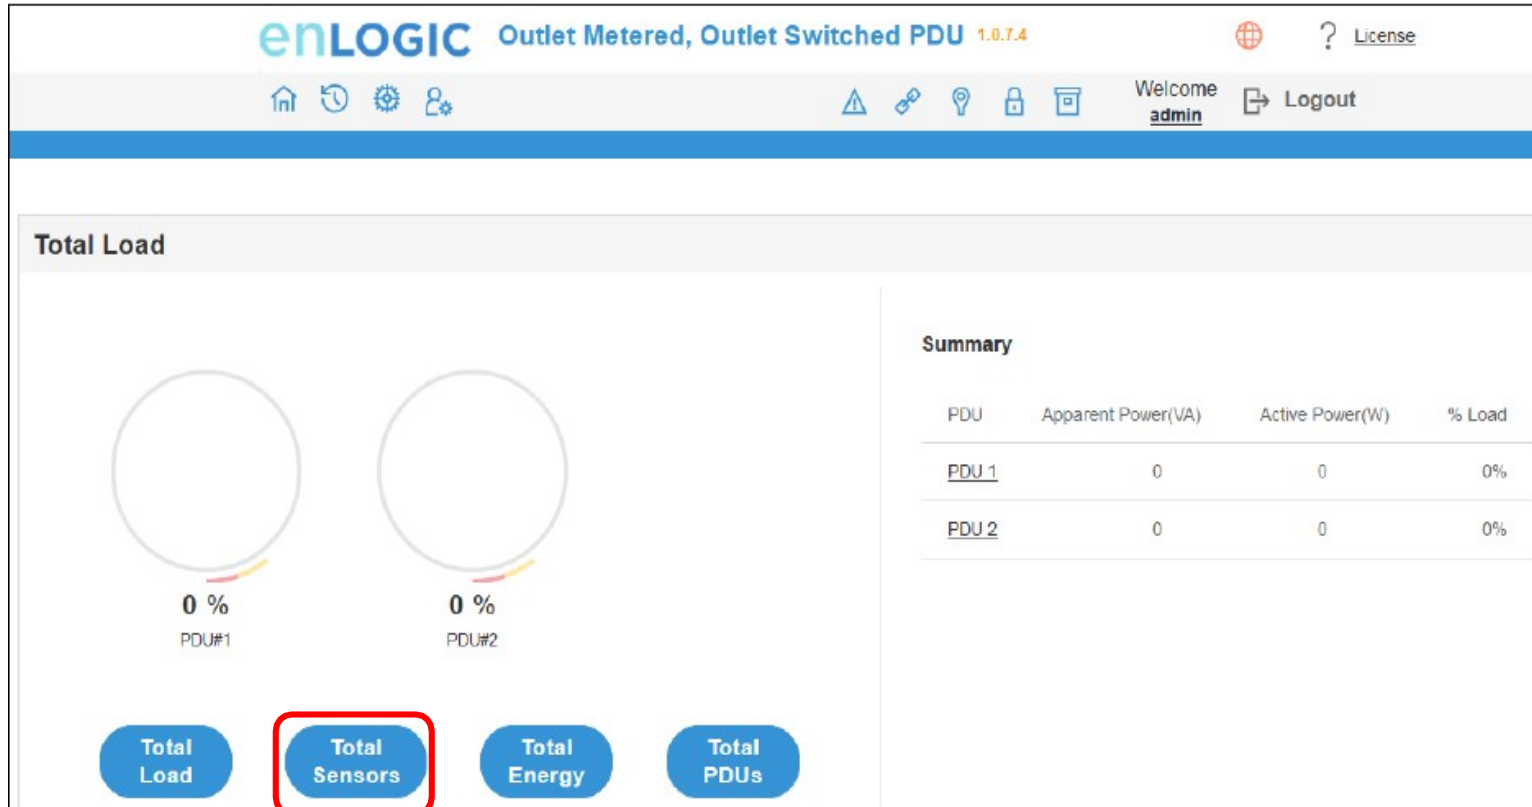

PCT Tool

- Firmware updates & PDU configurations via the PCT Tool
- Free end-user utility for PDU deployment and updating
- Auto-discover network attached PDUs
- Bulk update PDU firmware
- Configure PDU settings and save/maintain PDU configuration files
- Bulk upload PDU configuration files to network attached PDUs
- Download PDU settings and logs

|-----------------------|-----|
| PDU 1 | 14% |
| PDU 2 | 14% |
| PDU 3 | 15% |

NOTE

The Bar graph is displaying the total load per PDU in percentage. Mouse hover on each bar graph displays Load in percentage. To view detailed information of PDU, Please click on the hyperlink in Summary table.

Summary table is Tabular representation of Bar Graph.

Outlet Detail

The interface displays a modal window titled "B1" with a table of outlet data. The table has 9 columns: Status, Outlet Name, Current(A), Voltage(V), Power(VA), Watts(W), Power Factor, Energy(kWh), and Energy Since. The first row shows OUTLET 1 with a status of active (blue dot) and a current of 4.51A, while all other outlets are inactive (grey dot).

| Status | Outlet Name | Current(A) | Voltage(V) | Power(VA) | Watts(W) | Power Factor | Energy(kWh) | Energy Since |
|--------|-------------|------------|------------|-----------|----------|--------------|-------------|---------------------|
| ● | OUTLET 1 | 4.51 | 115.8 | 522 | 523 | 1.00 | 6.1 | 2000/00/04 22:51:55 |
| ● | OUTLET 2 | 0.00 | 115.8 | 0 | 0 | 1.00 | 0.0 | 2000/00/04 22:51:55 |

Monitoring interface and protocols

- SNMP V1/2/3
- RESTful API – JSON
- RESTful API – Redfish

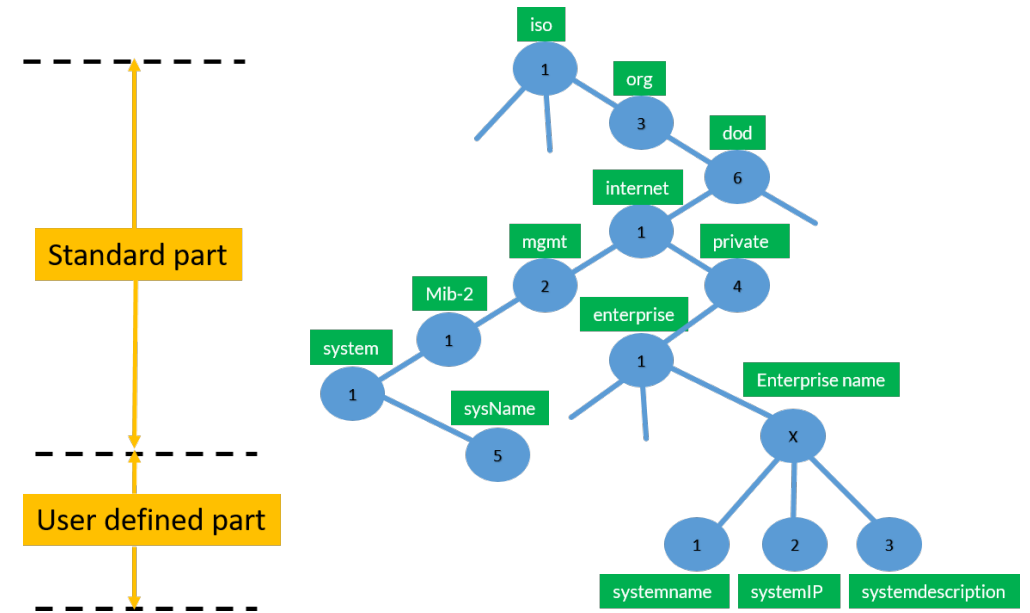

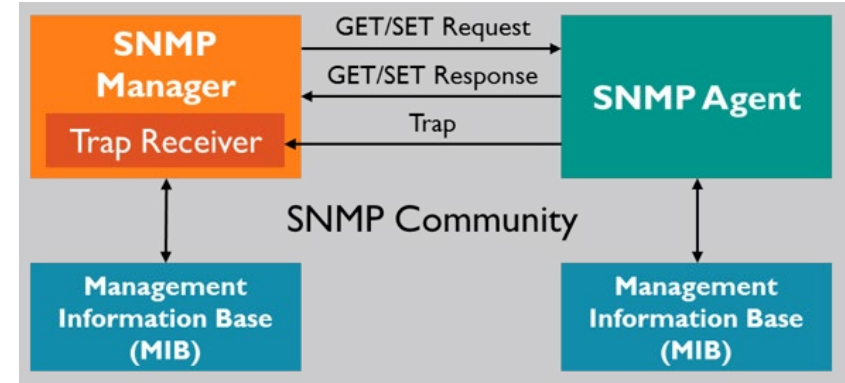

SNMP

Application layer protocol - SNMP effectively aids the monitoring of network infrastructures such as data stations, printers, servers, hubs, routers, WINS, and host configurations. Today, it is still one of the most widely used layer protocols for simple networks.

Simple Network Management Protocol (SNMP) offers easier identification and management of network devices. It makes real-time monitoring of the status of your network accurate and dependable. It also makes the management of online communication protocols possible. SNMP evolves and develops with every new version to deliver better features and functionalities.

Network management protocols like SNMP have made identification and management of network devices easy and convenient. The protocol keeps track of changes in the network and relays the status of all network devices in real time.

As the name hints, SNMP has a simple architecture which is based on the client's server technology. Basically, the server is the network manager; it measures different variables and processes data relayed from different devices on the internet network. Client devices on SNMP networks are referred to as "Agents." The agents are either computing devices or peripheral devices connected directly or indirectly to the network. They include computers, phones, printers, and network switches, among other devices.

RESTful / JSON / Redfish / APIs

REST has been employed throughout the software industry and is a widely accepted set of guidelines for creating stateless, reliable web APIs. A web API that obeys the REST constraints is informally described as RESTful. RESTful web APIs are typically loosely based on HTTP methods to access resources via URL-encoded parameters and the use of JSON or XML to transmit data.

JSON in RFC since 2006 – Standardised 2013 – Very popular Restful API
 JSON or JavaScript Object Notation is an encoding scheme that is designed to eliminate the need for an ad-hoc code for each application to communicate with servers that communicate in a defined way.

Over the last 15 years, JSON has become ubiquitous on the web. Today it is the format of choice for almost every publicly available web service, and it is frequently used for private web services as well.

The popularity of JSON has also resulted in native JSON support by many databases. Relational databases like PostgreSQL and MySQL now ship with native support for storing and querying JSON data.

DMTF Redfish since 2015 focusing and expanding on server and systems management now extended to include other PCI, local and network storage, memory, BMC management controllers, multifunction adapters, modern interface, tools readily avail in redfish standard, combination has made it available on implementation and client software side

Used with common scripting languages Python, C++, Java, Javascript, Ruby, C#
