

Crow Creek and Spearfish Creek Watersheds

Crow Creek is the largest stream in the Black Hills with a single spring as its primary water source. As it flows north and crosses Interstate 90, it gains considerable water.

Wild brown trout are found in Crow Creek, but dense streamside vegetation makes the reach within the McNenny State Game Production Area difficult to fish. Several ponds on the McNenny State Game Production Area are stocked throughout the year with rainbow trout.

Spearfish Creek is the second largest stream in the Black Hills and supplies some of the most diverse and best fishing in the Hills. In the town of Spearfish, anglers can fish a quality wild brown trout population.

In Spearfish Canyon, near the confluence with Squaw Creek, anglers can fish for wild rainbow and brown trout. Upstream of Cheyenne Crossing in the limestone cliffs, anglers will find numerous brook trout streams such as Little Spearfish and Hanna Creeks. The majority of the tributaries to Spearfish Creek are wild brook trout fisheries. Iron Creek Lake, west of Spearfish Canyon, has yellow perch as well as rainbow trout.
