

Solinst

Solinst 101 200ft Water Level Meter

Pine Item #51705

DESCRIPTION:

The Model 101 Water Level Meter uses a choice of probe designs, attached to a permanently marked polyethylene tape, fitted on a well-balanced reel. It is powered by a standard 9 volt battery housed in an easy-access battery drawer. The conductors embedded within the tape each have seven strands of stainless steel for strength and flexibility. The probe incorporates an insulating gap between electrodes. When contact is made with water, the circuit is completed, activating a loud buzzer and a light. The water level is then determined by taking a reading directly from the tape at the top of the well casing or borehole.

FEATURES:

- Permanent heat impregnated markings
- Sensitivity adjustable to conductivity
- Strong flexible tape is easily spliced
