

# DIY FAIRY GARDEN

30 min

## Supplies

- E.B. Stone™ Potting Soil
- Exotic Pebbles Decorative Stones (white, brown & black)
- Exotic Fire Glass (blue)
- Super Moss® Preserved Sheet Moss
- 16" Terra Cotta Bowl
- Keeper Stopper Soil Screen
- Three 2" Houseplants or Succulents
- Fairy Garden Accessories

## Directions

1. Fill pot with soil up to ½" under the rim.
2. Place plants in pot in desired location.
3. Create a focal point in your pot by laying stones and glass. For example, a winding pathway leading to a patio with a water feature on the side.
4. Use moss to cover bare soil.
5. Place your fairy garden accessories in the garden. Select one large accessory as the focal point, and place other accents depending on your theme or style.

## Care

Water thoroughly after planting. Depending on the plants you choose, you may choose to place your garden indoors, or outdoors in a protected area without direct sun. If you choose succulents, they will tolerate morning sun outdoors, but no afternoon sun. Water when top 1-2" of soil has dried out, approximately once a week, or more often in extreme heat.

## Tip

Choose a theme for your garden and stick with it. You can build on the theme over time — your imagination is the limit!
