

DIY Succulent Style

45 min

Supplies

- E.B. Stone™ Naturals Cactus Mix
- (1) 10" Terra Cotta Pot
- (1) 3"-4" Glazed Pot
- (4) 2.5" Succulents
- Super Moss® Preserved Sheet Moss
- Exotic Pebbles Decorative Stones (white, brown, or combination)
- Keeper Stopper Soil Screen

Directions

1. Start by selecting your succulent color palette. You can use color to complement the glazed pot you have chosen. Or you can use color to reflect your mood. Contrasting colors of red, green, and orange reflect energy. Monochromatic tones can be soothing and tie in to just about any garden palette.
2. Place a piece of the soil screen into the bottom of the 10" terra cotta pot to prevent soil run-off.
3. Fill the 10" terra cotta pot with Cactus Mix, leaving about 1"-2" from the top rim of the pot.
4. Place the smaller, glazed pot into the soil on its side, like the pot is being planted.
5. Start planting the succulents around the opening of the small pot, arranging them like a bouquet of flowers.
6. Place a layer of pebbles on the top half and the bottom half of the soil, using different colors to define the two areas.
7. Use the green moss to add color and texture to some of the open areas of the succulents.

Care

Water thoroughly after planting, and then one time per week after that, depending on the season. Succulents will do best with morning sun and afternoon shade in our climate. Potted indoor plants need to be near a window that will get indirect sunlight. Fertilize one time per month for best results.
