

MVP FEATURES

1. *Oversize Padded Kickplate*
2. *4° Angle of Tilt*
3. *Power Glide Backrest*
4. *Dual Density Headrest*
5. *Head End Elasticcord Loading*
6. *Range of Motion Control*

Oversize Padded Kickplate

Oversized for a variety of foot placements and padded for joint protection. Capable of handling forces well over 500 pounds. Padded kickplate surface is also replaceable for continued protection.

4° Angle of Tilt

Tilt approximates natural body lean that occurs during running and jumping. When no elasticords are engaged, tilt provides near weightless experience approximating 10% of user's body weight.

PowerGlide Backrest

Utilizes patented Horizontal Rebounding Technology which reduces the energy requirement for body blood flow while providing a soft, virtually noiseless stop to reduce body impact.

Dual Density Headrest

Soft foam center for comfort and semi-rigid foam side panels for shoulder stabilization. Detachable velcro headrest permits adjustments along full length of carriage to accommodate users of all heights.

Head End Elasticcord Loading

Elasticords engage at head end of MVP – available on Pro & Elite models – for easy access and extended elasticord life. Adding or subtracting resistance is simple and quick.

Range of Motion Control

Select ankle, knee and hip flexion by adjusting carriage placement in relation to kickplate. Move bar at the head-end stand to adjust flexion and Range of Motion.
