### Model KPS-2 Series

## Main Features

---

- **LCD Display**  
1" digit size displays weight.
- **Hold Button**  
Press HOLD key, the arrow in the left bottom flashes.  
When the loaded weight is above 1.5 kg and stable, the arrow stops flashing. To disable the hold function, press HOLD key again, and the arrow disappears.
- **Units Button**  
Press UNIT to toggle between kg, lb and oz.
- **ON/ZERO/OFF Button**  
Turn the scale on, zero or off. (The scale will zero when the weight is 20% of maximum capacity).
- **TARE Button**  
When there is load on the scale, press this key to return to zero.  
Put a container on the scale, press the key to tare the weight, and the tarred value is stored. Then scale is under NET mode.
- **Auto Shut Off**  
Powers off after 2 minutes of nonuse.
- **Interface**  
The scale contains a one-way RS-232 interface via a 9-pin cable (included with each scale) for transmission of weight and error messages.

See Appendix A for Communication Protocol details.

## Before You Begin

---

1. Remove scale from its box along with control panel and the 120V Adapter.

If using the 120V Adapter, plug one end into the receptacle (connector) at the rear of the scale. Insert the other end (the adapter) into a 120V outlet

## Battery Installation

---

The Digital Bench Scale operates with (6) "AA" batteries (Alkaline preferred).

1. Place unit upright on a flat surface and lift platform from top of scale.
2. Remove battery compartment door and insert batteries into compartment. Make certain to observe the correct polarity.
3. Replace compartment door and platform cover on scale.

## Auto Shut-off Feature

---

This feature makes the scale shut-off after 2 minutes of nonuse to conserve the battery. You can disable this feature and the scale will operate continuously.

1. Press and hold TARE until display shows SET <approximately three seconds>.
2. Release TARE, display shows UNIT.
3. Press UNIT to move across to the A.OFF
4. Press HOLD to select an option and save.

To exit the setup menu and save your changes:  
Press UNIT until you see END

Press HOLD to save your changes and return to weighing mode.

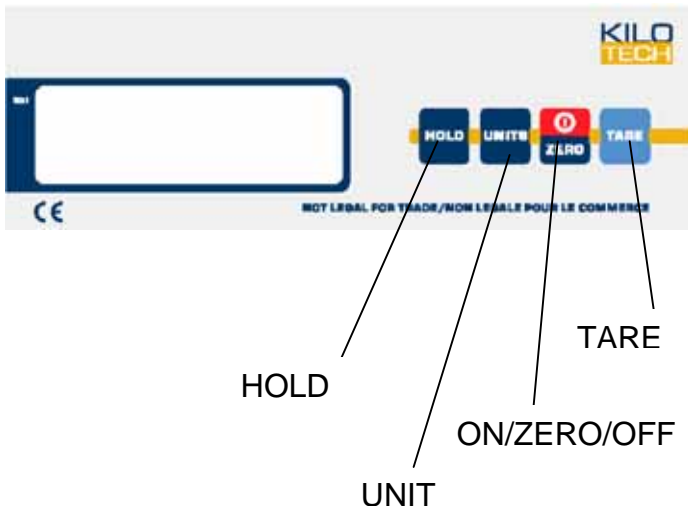

## Mounting the Unit

1. Mount bracket to wall using (2) screws that are appropriate anchors for the surface being mounted to.
2. Lower control panel into mounted bracket. Insert flat tip screws (included) through round holes in mounting bracket and drive the screws into existing threaded holes in lower half of control panel to secure control panel to bracket.

YOUR SCALE IS NOW READY FOR USE.

## Display and Function

## General Operation

### POWER ON

To turn the scale on, press the button marked "ON/ZERO/OFF". The display will first show "8888" for approximately two (2) seconds, then display "00". This indicates that the scale is ready for use.

### WEIGHING

When the display shows "00" it is ready to weigh an object. If the object exceeds the capacity of the scale by more than 5%, the display will show "0000,".

Until the overload condition is reached, objects can be placed on the platform, with the display showing the total weight of all objects on the platform.

### TARE OPERATION

To tare (zero out) a load on the platform (i.e.: the weight of a container), press the button marked "TARE" one time. When this is done, the display will show the value "00". This could be followed by the addition of another load, if so desired. The display will show the sum of all additional loads above and beyond the tared load.

### TARE CAPABILITY

A load of up to the capacity of the scale can be tared (zeroed out).

When a load is tared, an additional load up to the full capacity of the scale can be weighed.

**Example:** A Model 50 has a capacity of 50 kgs if a load of 10kgs on that scale is tared (zeroed out), an additional load or loads of up to 40 kgs can be weighed.

### TO HOLD THE WEIGHT DISPLAY

To hold the weight display, press the HOLD key. The weight will be held until the TARE key or HOLD key is pressed again.

### NOTICE:

Use this device ONLY for its intended use. Consult [www.kilotech.com](http://www.kilotech.com) for more details.

## Error and Status Messages

---

### Low Battery

If battery is discharged, the display will show the "Low" message. The operator should replace the batteries or use the adapter.

### Over Load

If the total load exceeds the maximum capacity of scale, the display will show the "0000" message. The weight must be removed from the platform and not allowed to remain on the platform.

### EPROM Failure

If the "ErrE" message appears, the operator should contact their scale service representative.
