1.0 Introduction

The BenchPro Series family of digital bench scales is ideal for many diverse industries and markets around the world. As a general purpose scale, the BenchPro offers many benefits, including the ability to tare containers and battery operation. Because of these extra features not typically found in traditional shipping, point of sale and postal scales, the BenchPro may be used for additional applications including retail, restaurant and deli, manufacturing, inventory control and more.

Manuals can be viewed and downloaded from the Rice Lake Weighing Systems website at www.ricelake.com

Warranty information can be found on the website at www.ricelake.com/warranties

Safety 1.1

Safety Signal Definitions:

DANGER

Indicates an imminently hazardous situation that, if not avoided, will result in death or serious injury. Includes hazards that are exposed when guards are removed.

Indicates a potentially hazardous situation that, if not avoided could result in serious injury or death. Includes hazards that are exposed when guards are removed.

CAUTION

Indicates a potentially hazardous situation that, if not avoided, could result in minor or moderate injury.

Indicates information about procedures that, if not observed, could result in damage to equipment or corruption to and loss of data.

General Safety

Do not operate or work on this equipment unless this manual has been read and all instructions are understood. Failure to follow the instructions or heed the warnings could result in injury or death. Contact any Rice Lake Weighing Systems dealer for replacement manuals.

Failure to heed may result in serious injury or death.

Ensure every individual operating or working with this unit has read and understands the following safely information.

Do not allow minors (children) or inexperienced persons to operate this scale.

Prior to cleaning, make sure the scale is disconnected from the power source.

Do not use this product if any of the components are loose or cracked.

Do not use in the presence of flammable materials.

Operating at voltages and frequencies other than specified could damage the equipment.

Do not use near water and avoid contact with excessive moisture.

Do not drop the scale or subject it to violent shocks.

Do not make alterations or modifications to the scale.

For accurate weighing, the scale must be placed on a stable, level surface.

1.2 Overview

1.2.1 Standard Features

- Die-cast aluminum base
- Stainless steel or dark plastic shroud (for dimensioning applications)
- 4 AA batteries with 80 hours of continuous use, AC power or USB powered operation
- 2.77" to 3.18" profile
- Local gravity compensation (non-approved)
- Optional post mount and secondary operator display

1.2.2 Options

The following options can be purchased for the BenchPro Model BP 1214-XXX series scales.

Part Number	Description
179184	Plastic weight platter
179183	Stainless steel weight platter
174784	Remote operator display with 6' cable
174783	Primary operator display pole mount bracket

Table 1-1. BenchPro Series Options

1.2.3 Display Mounting Options

Each model includes a mounting bracket. The bracket attaches to the base plate or can be mounted on the wall. The operator display attaches to the mounting bracket using two magnets which are included with each display.

Note Ensure the remote operator display is plugged into the RJ-45 connector prior to powering on the unit

Optional Post Mount Operator Display

An optional post mount bracket is required for use with the remote operator display. It can be attached to side or the back of the scale using the included mounting bolts. The mounting post has provisions to secure it to a table via mounting holes and nuts and bolts. The operator display attaches to the mounting bracket using two magnets which are included with each display.

Figure 1-1. Operator Display with Optional Post Mount Assembly

1.3 Dimensions

For service replacement parts see Section 6.3 on page 35.

Figure 1-2. Dimensions - Scale Mount Operator Display

Figure 1-3. Dimensions - Column Mount Operator Display

1.3.3 Keys and Symbols

Figure 1-4. BenchPro Series Operator Display

Additional capacity labels are provided with each unit. If using a scale in the applicable lb/oz mode or multirange kg mode, install the correct label over the existing capacity markings. See Figure 1-5 on page 5.

Кеу	Normal Operating Function	User and Configuration Mode Function
25F0 +0+	Quick press to turn the unit on Perform a zero function Press and hold for three seconds to turn the unit off	N/A
UNITS	Toggle between configured weight units	Enter or accept the value selected
	Perform a tare function (if enabled)	Scroll left
F1	Quick press to enter the user menu and configure A. oFF, bAH L, Prot, bAUd, PAr, 5toP, tArE, d AB and dDrE parameters of the scale. See Section 3.1 on page 9	Scroll right

Table 1-2. Key Functions

LCD Annunciator	Description	
→0←	Stable zero — indicates the scale is at a stable zero weight value	
G/B Gross/Brutto — indicates the scale is in gross mode.		
N	Net — indicates a Tare condition and the net weight is displayed	
W1, W2, W3	Weight range — indicates the weight range mode the scale is displaying	
lb, lb:oz, oz, kg, g	Units of Measure — indicates the unit of measure the scale is displaying	
power	Power LED — indicates scale is plugged into an AC outlet, batteries are charged, USB power is provided through the USB cable	

Table 1-3. Annunciator Functions

1.4 Capacity by Model Type

Available models in the *BenchPro Series*. The model number can be found on the serial tag located on the bottom of the scale.

Part Number	Model Number	Description
174879	BP-1214-75S	12 X 14", 150 lb (75 kg) capacity with stainless steel weight platter
174880	BP-1214-75S	12 X 14", 150 lb (75 kg) capacity with plastic weight platter
174787	BP-1214-35P	12 X 14", 70 lb (35 kg) capacity with plastic weight platter
179732	BP-1214-15R	12 X 14", 30 lb (15 kg) capacity with stainless steel weight platter
179733	BP-1214-6R	12 X 14", 15 lb (6 kg) capacity with stainless steel weight platter

Table 1-4. BenchPro Series Models

Additional capacity labels are provided with each unit. If using a scale in the applicable lb/oz mode or multi-Note range kg mode, install the correct label over the existing capacity markings.

Figure 1-5. Capacity Labels

			Units of Measure				
Model	Split (Range)	lb	lb /oz	oz	kg	grams

P 1214-15R	Off - Sngl	30 x 0.01	30 lb x 0.2 oz	480 x 0.2	15 x 0.005	

Table 1-7. Scales with Retail Software

Operation 1.5

Initial Power Up 1.5.1

Upon initial power up, the scale briefly displays the following:

- 5h ,P/Po5L/rELR ,L/ (type of firmware installed)
- Software type
- Version number of the software
- PASS

If the unit prompts FALL, power cycle the unit by unplugging the power adapter from the outlet or removing the batteries for 30 seconds. Replace the batteries or plug the adapter back in and turn the scale on.

1.5.2 Weigh Mode

- 1. Ensure the scale is at zero prior to placing an item on the scale.
- . The $\rightarrow 0 \leftarrow$ annunciator displays to indicates the scale is 2. If the scale is not at zero weight, press stable zero.

1.5.3 Tare

The tare function must be enabled in the configuration menu for the tare key to be functional. The factory default setting is disabled.

- 1. Place an item or empty container on the scale. The weight value displays.
- TARE . The weight value displays as zero and the N annunciator displays to indicates the scale is 2. Press displaying the net weight.
- 3. To return the scale to the gross mode, remove the item or container from the scale platform and press

Brutto mode.

2.0 Setup

2.1 Unpacking the Scale

Remove all contents from the packaging. Each carton contains the following:

- Scale with operator display attached
- In-line power supply
- US power cord
- USB cable
- RS-232 cable (not included with model BP1214-75S with plastic weight platter)
- Stainless steel, plastic weight platter or ball top weight platter (on selected models)

Inspect contents for damage. Contact Rice Lake Weighing Systems and the shipper immediately if any items are damaged.

2.2 Scale Setup

- 1. Remove the white protective cover from the stainless steel shroud.
- 2. Place the scale on a sturdy, level surface near a power outlet. Ensure the scale or weight platter are not touching any objects.
- 3. Level the scale by adjusting the leveling feet until the bubble level (under the weight platter) is within the circle.
- 4. Tighten the jam nut using a 12 mm or 1/2 " wrench once the scale is level.

2.3 Power

Power the BenchPro Series scale with one of the following:

- AC power supply
- Four AA alkaline batteries
- USB HID 2.0 Powered communications port (can be used as a stand alone device or interface to a 3rd party software program that recognizes devices following USB HID requirements). Loss of power to a USB device will turn off the scale

Once the scale is connected to a power source, the Power LED illuminates. Press **(**) to power on the scale.

2.4 Connections

The available connections on the *BenchPro Series* model 1214-XXX are shown in Figure 2-1. The USB connection may be used as an HID device or USB power supply. The scale is equipped with one standard bidirectional RS-232 port for connection to a PC or printer.

Note Do not use both the USB and RS-232 at the same time.

Figure 2-1. BenchPro Connections

2.5 Primary Operator Display Mounting Options

The primary operator display is included with each scale and comes connected to the die cast base housing. It comes with two magnets to hold the display in place during use. The operator display can be detached from the scale and mounted on a table or on a wall using the included 18" cable.

Figure 2-2. Operator Display Mounts

ote This picture is for reference only.

3.0 Configuration

3.1 User Settings

When navigating the user settings menu, press (b) to scroll through the parameters and options. Press (c) select.

Parameter	Options	Definition
RoFF	30 sec, 1 min, 3 min, 5 min, No off	Auto Off Time Setting
ЬЯН ∟	On, Auto, Off	Backlight Setting
PrOL	nci, 8213, ECr, EH-SCP, SMA	Protocol (model dependent)
ьяид	1200,2400,4800,9600,19200,38400, 57600	Baud rate
PAr	7 even, 7 odd, 7 none, 8 none	Parity
SEoP	1,2	Stop bits
ER-E	On, Off	Tare
e ,89	RAM, ROM, DIV-A, DIV-O	Diagnostics
donE	—	Done (exit)

Table 3-1. User Settings

Note After selecting all parameter settings, move to the donE parameter and press was to confirm and save settings.

3.2 Service Menu

The service menu provides all configuration settings and access to perform calibrations.

To navigate the service setting menu, press (1) to scroll through the parameters and settings; press (1) to select.

Press (IPP) to return to the previous parameter.

To enter into the service menu:

- 1. Remove the scale platform.
- 2. Remove the sealing screws.

Figure 3-1. Remove Sealing Screws

3. Press 🌑 to power on the scale.

4. Press the service setup switch once to enter the service setting mode.

- 5. Set service parameters.
- 6. Scroll to **dDnE** once all parameters have been set.
- 7. Press with and save changes.

Parameter	Settings	Description			
2Ero b	2% 5% 10% 20%	Semi Automatic Zero Set — the amount of weight (% of scale capacity) that can be zeroed from the scale when the zero key is pressed			
PU2Ero	10% 20% 50%	Initial Power up Zero Setting — the amount of weight (% of scale capacity)that can be zeroed from the scale upon power up; use if adding a unique weight platter instead of the factory supplied platter			
A2F	0.25d 0.5d 1d 2d, 3d	utomatic zero tracking — scale returns to zeroweight using the selected multiplier based on the vision or resolution of the displayed weight; in non-approved applications, use this feature to reture scale to zero weight if in a high vibration environment			
Filt	Lo Med Hi	Filter — controls the weight display update rate; used if the weight displays is fluctuating in a high vibration environment Lo - faster update Med - default Hi - slower update			
EdNodE	On Off	Extended Mode — used for engineering testing; turn on this feature to increase the displayed resolution by one decimal place			
R₀FF	Off 1 Off 3 Off 5 Off 30 OFF	Auto Shutdown (battery mode only) — select the amount of time of inactivity after which the scale automatically powers off Off 1 — off after 1 minute of no use Off 3 — off after 3 minuts of no use Off 5 — off after 5 minutes of no use Off 30 — off after 30 seconds of no use Off — scale does not turn off			
ЪАН ∟	On Auto Off	Backlight Shutdown — conserves battery life; select the amount of time of inactivity after which the backlight shuts off On - always on Auto - off after 5 seconds no activity Off - always off			

Table 3-2. Service Settings

Parameter	Settings	Description			
PrOL	SMA Nci 3835 8213 ECr r EH —	Protocol — determines the manufacturer output protocol or serial setting the scale is configured for; check 3rd party software to confirm correct selection, if the scale is connected to a PC via the <i>BenchPro</i> USB port, the USB HID protocol is automatically selected; USB HID settings are 1C19,0002 SMA — SMA Protocol (all models)Nci — 782X and 76XX family (all models) 3835 — NCI 3835 UPS worldship (models BP-XXXX-XXS only) 8213 — Toledo 8213 (models BP-XXXX-XXS only) ECr — Electronic Cash Register (models BP-XXXS-XXR only) EH — Models BP-XXXS-XXS only)			
ЪЯIJd	1200 2400 4800 9600 19200 38400 57600	Baud rate — match PC RS-232 setting to the setting of the scale; Check the PC Device Manager setting through the control panel in port settings			
PAr	7 even 7 odd 7 none 8 none	Data Bits and Parity — match PC RS-232 setting to the setting of the scale; Check the PC Device Manager setting through the control panel in port settings			
StoP	1 2	Stop bits — match PC RS-232 setting to the setting of the scale; Check the PC Device Manager setting through the control panel in port settings			
ЕЯгЕ	On Off	Enable or disable the tare button			
Gr Au	No Yes	Gravity Compensation — see Section 3.4 on page 12 for detailed information No - deactivated, calibrate scale with known accurate calibration weights Yes - View original calibration gravity and modify local gravity settings			
50	Off On	Manufacturing mode only; do not use; not not adjust			
UN 165	lb lb:oz oz kg g	Units of Measure — turn on and off units of measure; Applicable settings are dependant on the model of scale purchased; see Section 1.4 on page 5 for available selections; Most models have a minimum of two units of measure turned on. To avoid incorrect weight being displayed or transmitted to the PC, only have the applicable units of measure turned on.			
ERP	150 kg	 Capacity – defines the maximum capacity of the scale and determines the weight value to be used; When selecting lb, the calibration weight used must be in lb When selecting kg, the calibration weight used must be in kilograms. NOTE: See Section 1.4 on page 5 for capacity selections on each model. Do not select capacities other than those indicated by the manufacturer, 			
SPL iE	Off 2rnG 3rnG 2intvl 3intvl	Configure the unit for multi-range or multi-interval on select models of the <i>BenchPro Series</i> Off - unit displays in single range 2rnG - displays weight in multi-range mode dual range 3rnG - displays weight in multi-range mode triple range 2intvl - displays weight in multi-interval mode dual range 3intvl, - displays weight in multi-interval mode triple range			
ERL		Calibration — see Section 4.0 on page 14 for detailed information on calibration of the scale			
d (89	RAM ROM DIV-A DIV-O	Diagnostic menu — used to troubleshoot scale operation. See Section 6.1 on page 34 for more information on using the diagnostic menu. RAM - if an error occurs, contact RLWS for a new PCB ROM - If an error occurs, contact RLWS for a new PCB DIV-A - Display internal counts after auto zero tracking DIV-O - Display internal counts			
donE	—	Done — exit the configuration menu, save settings and return to weigh mode			
Bold indicates factory default setting.					

Table 3-2. Service Settings (Continued)

3.3 Split Multi-Range and Multi-Interval

The split (5PL +E) menu option is used to configure the scale to display weight as a single range, multi-range or multi-interval.

Single Range — a scale having one weighing range.

Multi-range — a scale having two or more weighing ranges with different maximum capacities and different scale intervals for the same load receptor, each range extending from zero to its maximum capacity.

Multi-interval — a scale having one weighing range which is divided into partial weighing ranges each having different scale intervals; the weighing range is determined automatically according to the load applied, on both the increasing and decreasing load.

The default setting for the Model BP 1214-35P is 2rng, however, the unit can be configured for single and 3rng.

			Units	Units of Measure								
Model	Split (Range)	lb	lb /oz	oz	kg	grams						
BP 1214-35P	Off - Single	70 x 0.02	70 lb x 0.5 oz		35 x 0.01							
	2rng		0-7 lb x 0.05 oz 7 – 70lb x 0.2 oz		0 – 5 x 0.001 kg 5 – 35 x 0.01kg							
	3rng				0 – 5 x 0.001 kg 5 – 10 x 0.002 kg 10 – 35 x 0.01kg							

Table 3-3. Model BP 1214-35P

Note Italic Capacity and resolution in Table 3-3. are pending Legal for Trade approval.

3.4 Gravity Mode Setting

Gravitational variations may affect the accuracy of the *BenchPro Series* scale upon initial installation. The scale includes a feature that allows for adjustment of the gravity setting to the location and reducing the need for initial calibration.

The *BenchPro Series* is a Legal for Trade device. Rice Lake Weighing Systems recommends contacting an authorized scale technician to perform a calibration using certified accurate weights. The Gravity Mode must be turned off when calibrating the scale with certified weights.

The factory default values are:

- Original Calibration Constant Setting: 9.7882 or 9.8056
- Local Calibration Constant Setting: 9.8056 (Rice Lake, Wisconsin)

To determine local gravity, use the Internet to identify local latitude and altitude. Type these values into a local gravity calculator to determine the local gravity constant. The *BenchPro Series* uses 4 values to the left of the decimal place and it may be necessary to round the values prior to input.

Use the following steps to modify the local gravity $(\mathbf{Lr}\mathbf{H}\mathbf{u})$ constant setting.

1. Remove the weight platter.

12

- 2. Remove the main cover plate.
- 3. Locate and press the service setup switch.
- 4. Place the weight platter back onto the scale. The scale is now in calibration mode and **ZEro b** is displayed.
- 5. Press 🔳 until **GrA** is displayed.
- 6. Press (with to accept. **JE5** is displayed.
- 7. Press (with the current gravity constant setting is displayed.
- 8. Press with to accept. Local gravity is displayed 9.8056.

RICE LA

- 9. Press (F) to increase the flashing digit.
- 10. Press (to accept the value entered and move to the next digit.
- 11. Repeat steps 9 and 10 until the local gravity value is complete.
- 12. Press **GrA**_u is displayed.
- 13. Press (I) until donE is displayed.
- 14. Press (with the accept and save the setting. The scale returns to the weigh mode.

Below are links to websites used to determine local latitude and altitude. Please note these website address are provided for reference only and may change.

National Geophysical Data Center: <u>www.ngdc.noaa.gov</u>

Measurement Canada: <u>www.ic.gc.ca</u>

Map Coordinates: <u>www.mapcoordinates.net/</u>

Once local latitude and altitude have been determined, use the following link to calculate local gravity <u>http://www.sensorsone.com/local-gravity-calculator/</u>

The gravity correction function has not been evaluated by an approvals agency, therefore it is up to the authorized scale dealer to ensure the device is accurate at the intended point of use.

4.1 Span Calibration

The *BenchPro Series* allows for calibration with weight values other than full capacity. Table 4-1 displays the alternate calibration weights for each model.

Calibration should only be performed using certified tests weights and performed by the local scale distributor.

Turn off Gravity Compensation (Section 3.4 on page 12) prior to performing a calibration using certified weights. The default capacity ([IRP]) setting is in lb, if using kg calibration weights, change the [IRP] to the appropriate scale capacity of the scale model. The model number of the scale is located on the serial tag on the bottom of the scale.

Model	Scale Capacity	Alternate Calibration Weights	Scale Capacity	Alternate Calibration Weights
BP 1214-6R	15 LB	5, 10, 15LB	6 KG	2, 5, 6 KG
BP 1214-15R	30 LB	10, 20, 30 LB	15 KG	5, 10, 15 KG
BP 1214-35P	70 LB	20, 50 70 LB	35 KG	10, 20, 30 KG
	100 LB	30, 50, 100 LB	50 kg	10, 25, 50 KG
BP 1214-75S	150 LB	50, 100, 150 LB	75 kg	20, 50, 75 KG
	300 LB	100, 200, 300 LB	150 kg	50, 100, 150 KG

Table 4-1. Alternate Calibration Weights

- 1. To enter the calibration mode, remove the weight platter and the main pcb cover plate.
- 2. Locate and press the service setup switch.
- 3. Place the weight platter back onto the scale. **ZEro b** is displayed
- 4. Press (I) until **G**-**A**_u is displayed.
- 5. Press (to accept. \forall E5 or \neg \Box is displayed.
- 6. Press (F) to scroll to $n \square$
- 7. Press (with to accept. Gr Au is displayed.
- 8. Press (. CAP is displayed.
- 9. Use Table 4-1 to choose the appropriate scale capacity.
- 10. Press 🔳 to scroll to chosen capacity.
- 11. Press (with to accept. **CAP** is displayed
- 12. Press 🕕 until **CAL** is displayed.
- 13. Press (with to accept. [2Ero is displayed.
- 14. With no weight on the weight platter, press **wiss** to accept. A six digit value displays. This is the internal counts of the load cell at zero weight.
- 15. Press (m) to accept and perform a zero calibration. [2Ero is displayed.
- 16. Press 🕕 once. **[SPAn** is displayed.

- 17. Press us to accept. XXX lb or XXX kg displays.
- 18. Press (1) to scroll to the alternate calibrate weight value, if performing a calibration using certified weights. If not using certified weights, skip to Step 19.
- 19. Press with to accept. I is displayed.
- 20. Place the calibration weight on the scale and wait for the value to stabilize.
- 21. Press (wind) to accept. The calibration data is saved and the scale returns to the weigh mode.

The weight value displayed must match the value of the calibration weight used. If not, perform the calibration a second time and follow each step carefully. If $E_{\Gamma\Gamma}$ / displays, there is a calibration error. Ensure the correct calibration weight value was selected in comparison to the actual calibration weight used. See Table 6-1 on page 34 for more information on troubleshooting.

4.2 Linear Calibration

The linear calibration function should only be performed if instructed by Rice Lake Weighing Systems Important and an authorized scale technician.

The *BenchPro Series* includes an optional linear calibration feature. This is an additional feature to perform after a span calibration has been completed at maximum capacity and linear calibration is performed with two lower calibration weight values.

- 1. To enter the calibration mode, remove weight platter and main cover plate.
- 2. Locate and press the service setup switch.
- 3. Place the weight platter back onto the scale. **2Ero b** is displayed.
- 4. Press 🔳 until **GrA** is displayed.
- 5. Press (to accept. \forall E5 or \neg \square is displayed.
- 6. Press (\square) to scroll to $\neg \square$
- 7. Press with to accept. **L**-**A** is displayed.
- 8. Press (P). CAP is displayed.
- 9. Use Table 4-1 to choose the appropriate scale capacity.
- 10. Press 🖪 to scroll to chosen capacity.
- 11. Press (with to accept. **CAP** is displayed
- 12. Press 🕕 until **CAL** is displayed.
- 13. Press (WTS) to accept. [2Ero is displayed.
- 14. Press (1) twice. [L in is displayed.
- 15. With no weight on the weight platter, press (with accept. **Point** 1 is displayed and then the first linear calibration weight value.
- 16. Press (with to accept. **D** is displayed.
- 17. Place the weight on the weight platter and wait for the value to stabilize.

- 18. Press with to accept and perform Point1 calibration. Point2 is displayed and then the second linear calibration weight value.
- 19. Remove the weight from the weight platter.
- 20. Press with to accept. **D** is displayed.
- 21. Place the weight on the weight platter, wait for the value to stabilize.
- 22. Press out to accept and perform Point2 calibration. The calibration data is saved and the scale returns to the weigh mode.

The weight value displayed must match the value of the calibration weight used. If not, perform the calibration a second time and follow each step carefully. If $E_{\Gamma\Gamma}$ / displays, there is a calibration error. Ensure the correct calibration weight value was selected in comparison to the actual calibration weight used. See Table 6-1 on page 34 for more information on troubleshooting.

5.0 Communication

5.1 Scale to Computer Port Connections

The *BenchPro Series* scales can be connected to a computer using a compatible third party software program. In order for the scale to transmit the weight, identify the interface protocol included in the third party program and compare with the *BenchPro Series* Software Compatibility Chart (Section 5.5 on page 33). The most current version of the compatibility chart can be found at on the Rice Lake Weighing Systems website.

Computer COM Port	Scale Com Port
COM 1 – RS-232	9-pin DE type female connector
COM 2 – RS-232	9-pin DE type female connector
USB	Powered USB 2.0 COM port (USB HID compatible software only)
	9-pin DE type female connector RS-232/ USB converter

Table 5-1. Communication Ports

5.2 I/O Specifications

The *BenchPro Series* includes both a straight pass through RS-232 cable and USB Cable. The functional pin out is as follows:

D	E-9 Male Hos	t
Pin	Name	Direction
1	DCD IN	
2	RXD	IN
3	TXD	OUT
4	DTR	OUT
5	GRND	
6	DSR	IN
7	TRS	OUT
8	CTS	IN
9	OUT	OUT

Computer

RS232

Scale

Table 5-2. RS-232 Pinout

Note Modem control lines are not supported. The scale is DTE.

5.3 USB

The *BenchPro Series* conforms to the USB HID Point of Sale Usage Tables, March 5 2001, Version 1.02. Reference <u>www.usb.org</u>, HID Information at <u>www.usb.org/developers/hidpage</u>

Make sure the computer software has a USB HID scale interface. After plugging into the USB port, turn the scale on. The following is displayed:

Driver Software Installation	1	×	Driver Software Installation		X
Installing device drive	r software		USB Input Device installed	ł	
PB3500	Searching Windows Update				
			USB Input Device	Ready to use	
Obtaining device driver softw	ware from Windows Update might take a while.				
Skip obtaining driver softwar	re from Windows Update				
		Close			Close

Table 5-3. USB Driver Install

When the driver is installed, using device manager, the BenchPro Series will be identified as a HID-compliant device.

Once the windows driver has been found, the device is ready for use. USB Specs:

- Vendor ID = 1C19
- Product ID = 0002

Interface Protocols by Model

- BP-1214-75S = SMA, 3835, EH, 8213, nci, USB Hid
- BP-1214-35P = SMA, nci, USB Hid
- BP-1214-6R115RR = **SMA**, nci, USB Hid, Ecr

5.5 Bench Pro Series Software Compatibility

Verify the software products listed below continue to offer compatibility with scale manufacturer type or protocol identified prior to installing a software upgrade.

Company Name	Software	Protocol Settings	Notes
Rice Lake Weighing	iDimension Family	USB HID	1C19,0002
UPS	Worldship	3835	*4800, 7, E, 1
FedEx	Ship Manager	3835	**4800, 7, E, 1

Table 5-6. BenchPro Series Software Compatibility

*UPS Worldship provides access only to COM ports 1-4 when using RS-232 to USB converter, Assign the USB COM port through device manager to reflect as COM port 1-4 in advanced settings.

**FedEx Ship Manager allows users to customize the format of the scale. This feature is found in Utilities>Configure Scale>Scale Type = Custom. Query String = W; Response Format = xwwwwwwttxxxx.

6.0 Maintenance and Troubleshooting

Prior to calling customer support have the software type and software version number available. These are displayed briefly when powering on the scale.

6.1 Troubleshooting

Error Code	Description	Possible Cause	Corrective Action
Err I	Calibration error	Incorrect calibration weight value used; damaged load cell	Repeat calibration Replace load cell
Err2	Power up or initial zero error	Upon power up, weight or item on the plat form is greater than PU2Er o setting	Remove weight and power cycle the scale
Err3	Semi-auto zero error	When pressing the zero button, the weight value displayed is greater than the % in Zero configuration	
Erry	Configuration error	Invalid configuration settings	Check configuration settings
ErrS	Overload error	Too much weigh applied	Perform calibration, check LC mV
ErrB	Memory error	PCB is corrupt	Replace main PCB
LobAt	Low battery	Battery power voltage is below 4.2 V	Replace batteries
ErrAd	A/D Conversion error		Calibrate, replace main PCB

Diagnostics Menu

The diagnostic menu (d_1 ,H) is used to troubleshoot scale operation. Use DIV-A or DIV-O to test the functionality of the load cell.

- 1. From the diagnostics menu, press DIVA or DIVO.A value is displayed.
- 2. Add weight onto the scale to see if the counts increase.
- 3. Remove the weight to see if the value returns the value displayed in Step 1.
- 4. Calibrate the scale before determining a load cell is bad.

6.2 Load Cell Wiring

6.3 Replacement Parts

Figure 6-2. BenchPro Series Parts Illustration

Item No.	Part No.	Description
1	179184	Plastic platform
2	179183	Stainless steel platform
3	179186	Load bridge
4	50622	RL 1521A, 10 kg load cell – Model BP 1214-6R only*
	50624	RL 1521A, 20 kg load cell – Model BP 1214-15R only*
	179679	AL-2461B, 35 kg load cell – Model BP 1214-35P only*
	179680	AL-2461C, 75 kg load cell – Model BP 1214-75S only*
	179735	AL-2461C, 20 kg load cell – Model BP 1214-15R only*
	179736	AL-2461C, 10 kg load cell – Model BP 1214-6R only*
*Load cell to	orque: 120 kgf	-cm
5	179188	Battery housing cover
6	179190	AA Battery holder
7	179191	Primary operator display with 18" cable and capacity labels
	174784	Primary operator display with 6' cable and capacity labels
8	179192	Primary display magnet
9	179193	Primary operator display bracket
10	179185	Foot with nut
11	179187	Die Cast Base
12	179189	PCB housing cover
13	174783	Optional column post mount
NS	174785	Main PCB — Model BP 1214-75S only
	179648	Main PCB — Model BP 1214-35P only
	179651	Main PCB — Model BP 1214-6R/15R only
NS	174782	AC Power supply with cable
NS	174786	USB interface cable

Table 6-2. Parts List

7.0 Specifications

Inline power supply

Other:

mmic hower subbid		Ulici.			
Input	100 V-240 V	USB HID:	1C19,0002		
Output	12 V/222 ma, VDC@ 1.0 amp CD				
_	min	RS-232 Cable:	10' DB 9-pin male to female, straight		
Frequency	$50/60 \text{ Hz} \pm 3 \text{ Hz}$, Standard		pass through and null modem		
Approvals	UL, CE, EN, CUL	USB Cable:	46'' (116.84 mm) A/B type USB cable		
Ballery Puwer		Stainless Steel Platter:	18 gauge, approximate 1.2mm		
Ballery lype	LowBat indication at 4.3 V (not included)	Base:	Die-Cast aluminum base with black power coat		
Approx life	Non-backlight and software controls	Load bridge:	Die cast aluminum, non painted		
	for sleep mode—250 hours or 80 hours continuous use, power consumption at 23 mA	Leveling Feet:	Adjustable with lock nut, adjust the height of the scale from 2.77'' H (70.5 mm) to 3.18'' (80.76 mm) H		
	Backlight on and software control for				
	sleep mode—80 hours or 50 hours continuous use, power consumption at 30 mA	Sealing Means:	Calibration button is accessed on the main pcb with cover and provisions made for lead wire seal		
USB or AC Power		Motherboard:	5000d A/D converter,		
Approx life	Non-backlight power consumption at 68 mA		microprocessor, dual display circuits with RJ-45 connections, Four AA Alkaline battery, 9-pin RS-232, USB HID Interface, IAP or Boot Load firmware download		
	Backlight on power consumption at 75 mA				
Interface Protocols		Dynamic Response:	From time of weight applied to scale- time of stable weight		
	MA, 0000		display with applied weight of:		
Operator Display			0 - 1000d, 1000 ms, maximum mean		
Keypad	4 key touch key panel (Units, Power/ Zero, Tare, F1) Minimum key press life of 5000.000 cvcles		average 1000d +, 1500 ms, maximum mean		
Display	ABS plastic housing, 6 digit backlight	Internal Resolution:	500,000 internal count minimum		
	LCD display with 29 mm or 1" high	NSF Approval	Pendina		
	Brutto. Net. W1/W2/W3 multi-range	Overload Protection:	Corner and center overload		
Display Dimensions	or multi-interval weight ranges. 5.25'' (133.4 mm) x 2.21'' x (56.1		protection will be provided on all models		
	mm)	Weight:	Scale: 11.4 lb (5.17 kg)		
L×W×H	x 1.09'' (27.76 mm)		Shipping Weight: 17 lb (8 kg)		
Primary Operator display	v includes 18" cable	Package Dimensions:	18.5" x 18.5" x 8" (47 cm x 47 cm x 21 cm)		
Remote Operator Displa	y includes 72'' cable with RS-45 connection to base	Packaging:	Meets or exceeds NSTA and ISTA approvals		
Units ka, lb, oz, lb:oz, a		MTBF:	The MTBF of the equipment shall be greater than 50,000 hours (with 100% power-on).		
Environmortal		Mean Time to Repair:	Shall not exceed 20 minutes		
Operating Temperature	14°F to 104°F (-10°C to 40°C)	Cleaning:	Exterior surfaces are capable of withstanding mild soap and water		
Humidity	15 to 85% (Non Condensing)		wipe down with a wet cloth
