

ESZ Tenkara Fly Fishing, Denver Colorado

The ESZ Foldable Net

User's manual

— Built with four different materials for durability and usability:

7075 anodized aluminum (net rim)

6063 anodized aluminum (joint)

titanium (main bolt)

carbon fiber (handle)

— Net joint designed so net can be easily opened with one hand.

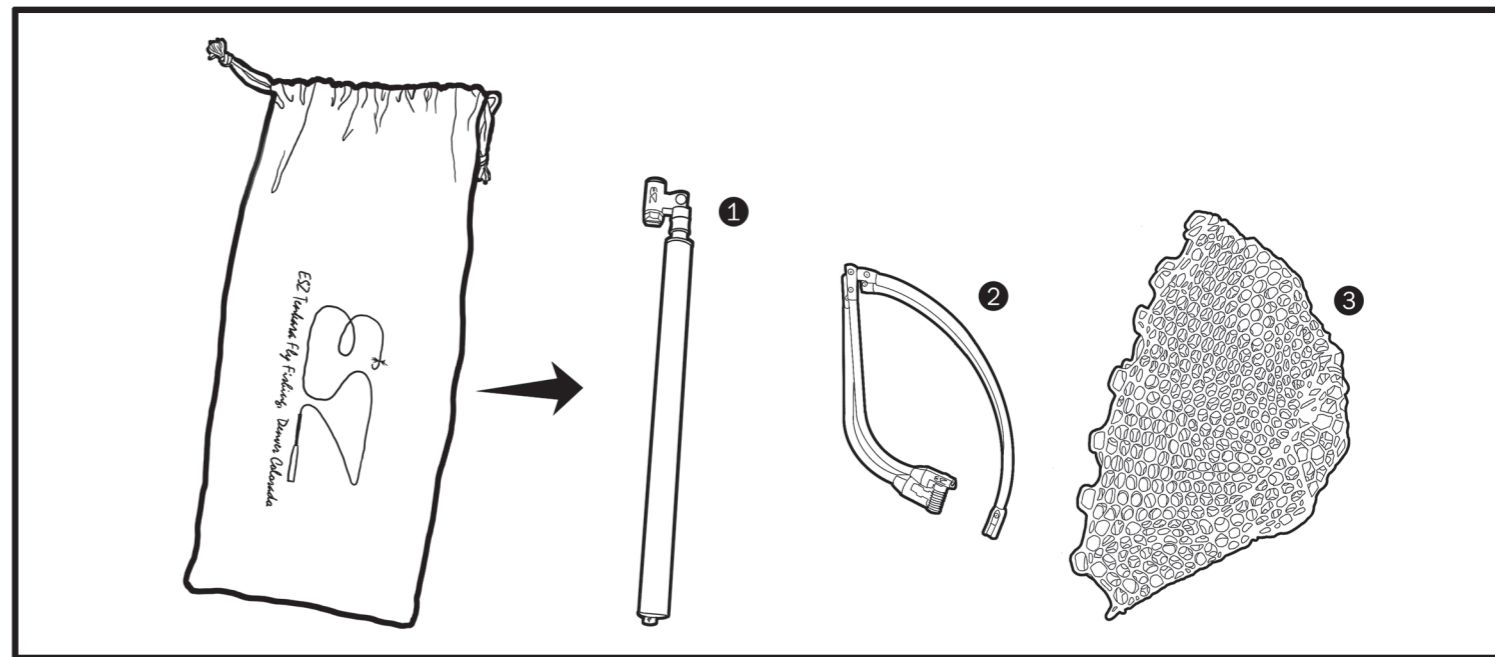

— Can be used as a traditional fixed landing net, or a folding landing net.

Put Together Your ESZ Foldable Net in 7 Easy Steps

Step 1

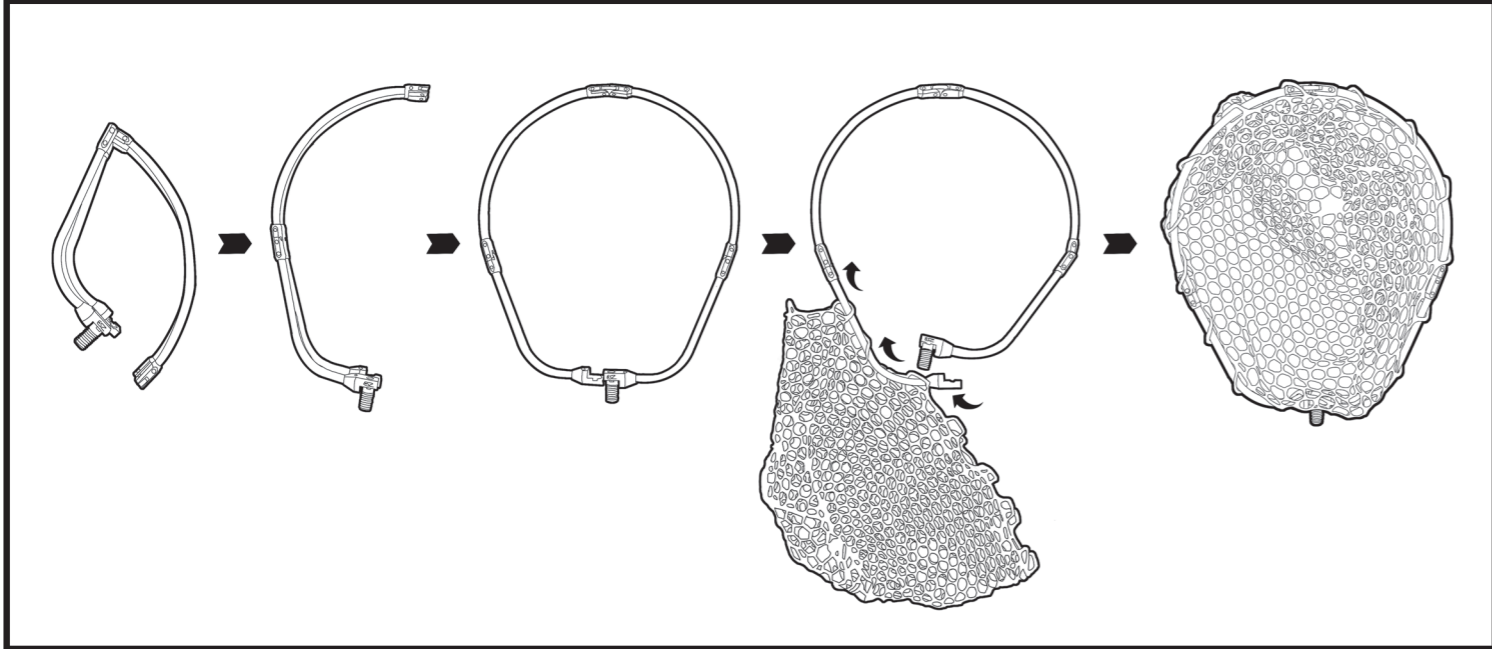

This is what you should find inside your ESZ Foldable Net canvas bag:

- Net handle (with joint on it)
- Net rim
- Silicone net

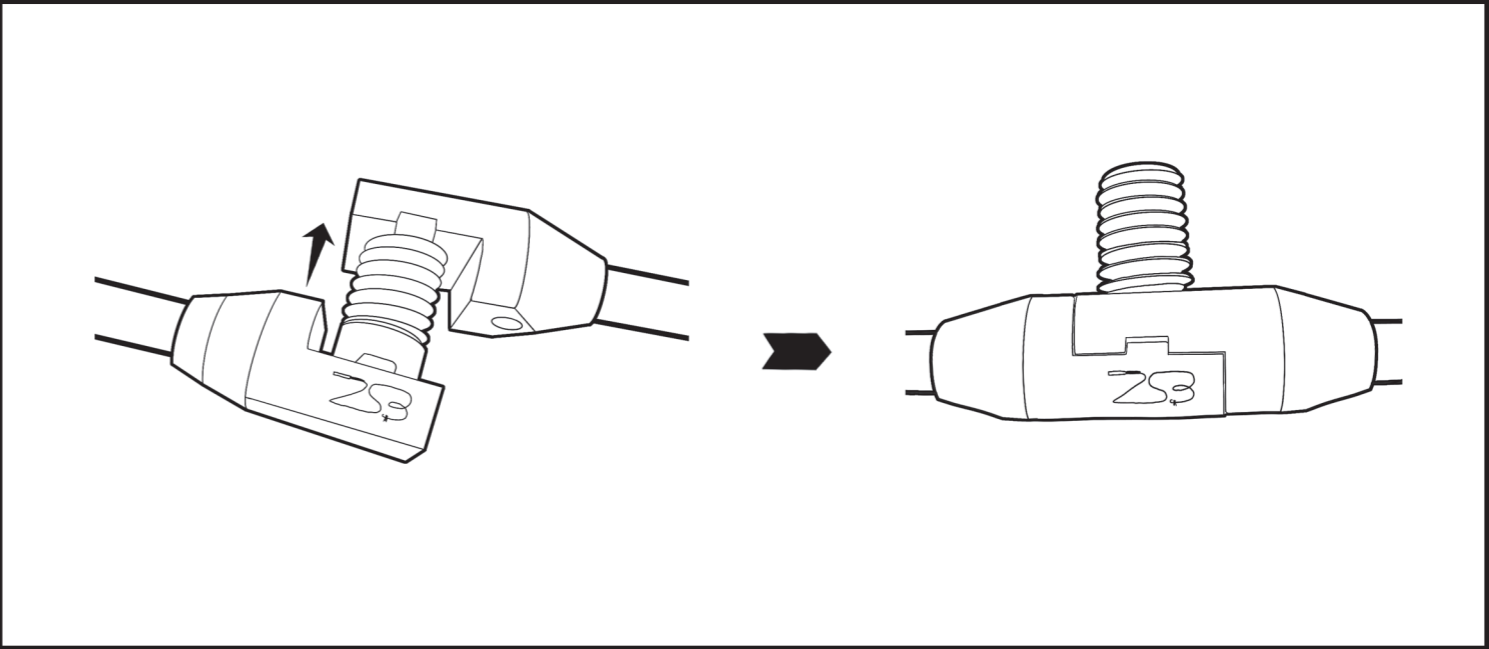

Step 2

- Fold the net rim like you see in the above illustration.
- Thread the net rim through the threading loops located around the edge of the net.

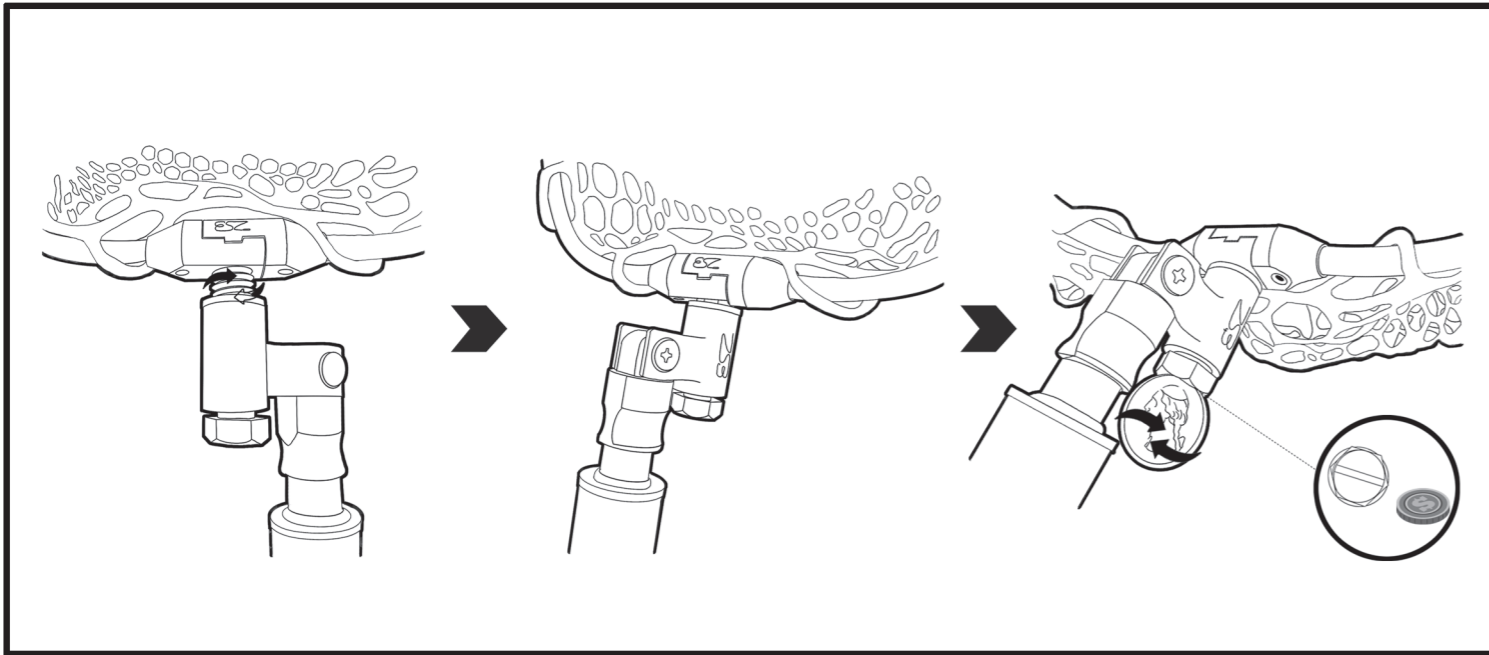

Step 3

- Connect and secure the two ends of the net rim together, ensuring that both ends are fully linked.

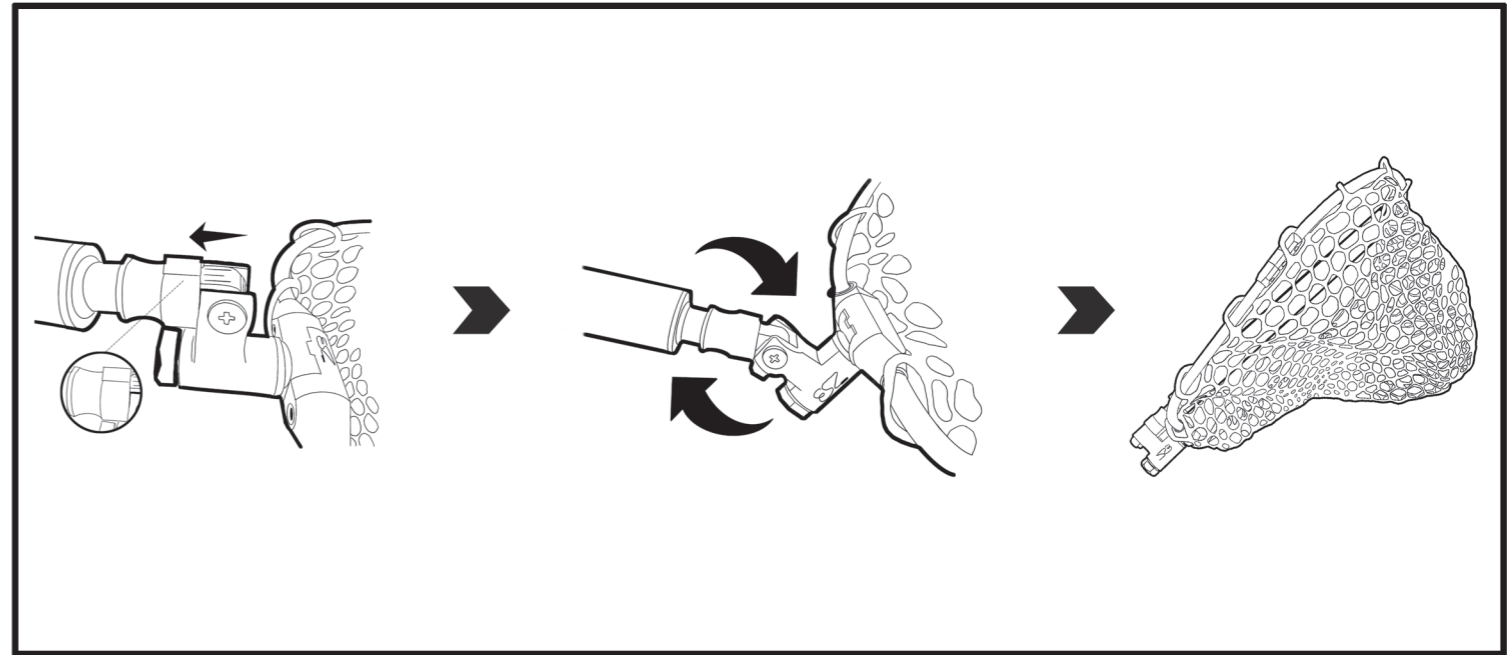

Step 4

- Screw the net rim bolt into the joint by hand, making sure the net rim is 90° perpendicular to the joint.
- If it is loose, use a coin or a flathead screwdriver to tie the other bolt on the opposite end of the joint.

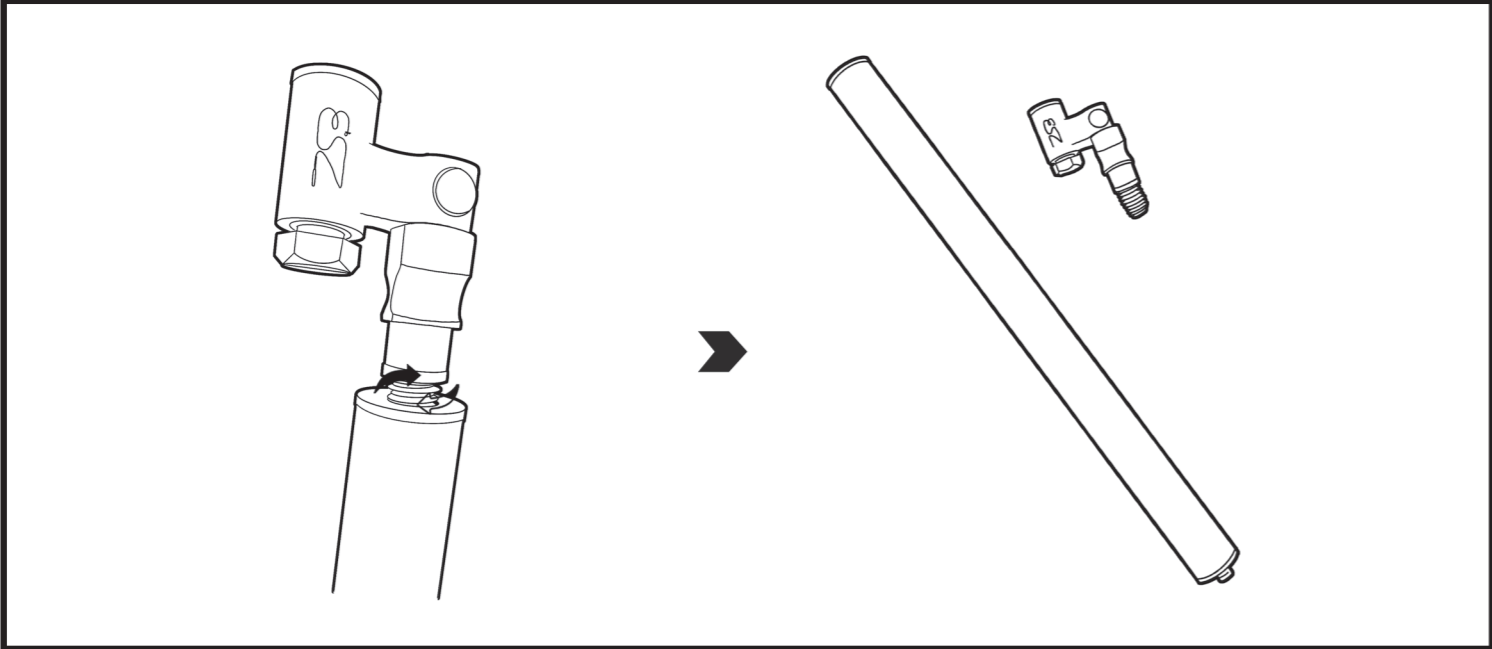

Step 5

- Use the lever on the net joint to fold and unfold the net.
- TO FOLD: Pull the lever in the direction of the handle.
- TO UNFOLD: Just hold the net handle and shake it forward and away from you.

Step 6

- To clean the inside of the handle (if it ever becomes necessary), simply unscrew the net joint from the net handle.

Step 7

- After cleaning, we suggest to use a few drops of thread-locking fluid (not included) before screwing the net joint back in place.
