

Extension Kit for Citadel Pressure Mount Pet Gate Instruction/Installation Guide

Thank You for choosing the Dynamic Accents Ltd. 36" Tall Pressure Mount Pet Gate extension kit for your pet containment needs. Please keep this guide for future reference on installation of this product.

This product is proudly Made in the U.S.A. of solid White Oak and coated with a non-toxic, water based finish.

This extension kit adds additional span to your Citadel Pressure Mount Pet gate. The 6" Extension kit allows your gate to span openings up to 50" wide and the 12" Extension Kit allows openings up to 62" wide. This gate is NOT recommended for use in openings larger than 62" wide.

Your Package Includes the following:

6" Gate Extension Kit

12" Gate Extension Kit

The 6" Gate Extension kits and 12" Gate Extension kits are recommended only for use with the Dynamic Accents Ltd Citadel Pressure Mount Pet Gate. Any other use of these gate extension kits could result in accident or injury to yourself or your pet.

Measure the width of the opening where the gate is to be placed to determine the width of span needed. Your Citadel gate comes equipped with (2) 2" extensions and is capable of spanning openings up to 38" total. Choose the appropriate extension(s) needed to add to your gate to come within 2" or less of the total span needed. The adjustable wall bumpers will be used for final adjustment of up to 2" or less.

Example:

The opening to be covered by the gate is 47" wide, you will need the following components:

A: Citadel Pet Gate = 32"

B: (1) 2" Extension = 34"
(32 + 2)

C: (2) 6" Extensions = 46"
(34 + 12)

The remaining adjustment will be covered by adjusting the wall bumpers.
** Remember, Gate frame is intentionally wider at the top because of the tension design of the product. Bringing the frame into alignment with the gate door during installation creates the tension effect to hold the gate in place.

How to install the gate extension(s):

1. Affix any necessary extensions to the main gate frame utilizing the connector bolts and included hex key.
2. Determine the desired direction for the door opening and set the gate against the wall/door frame at a square, right angle, ensuring that the gate frame bottom is firmly on the floor. (The top of the frame may likely be wider than the opening, so use minimal force to pull the wide, outer frame top into square alignment.
3. Adjust top, door opening bumper to bring door frame into alignment so that gap between door and frame is consistent from bottom to top.
4. Adjust the remaining wall bumpers outward equally to create enough force to securely hold the gate in place, again ensuring that the gate frame bottom is firmly on the floor.
5. Open and close gate several times to ensure a snug, secure fit. Make minor bumper adjustments equally to each side as needed.

CAUTIONS:

- NEVER use this product at the top of a staircase
- Install this product on a level, even surface with smooth walls.
- Keep gate door securely closed when not in use.
- Do not lean or sit on this product.
- Keep this product away from fire or extremely high temperatures.
- Do not use this product for anything other than its intended purpose.
- Use only mild detergent and water to clean this product.

***It is NOT recommended that this gate be used to span openings larger than 62" total.
