

## Find Your Size

Align your heel with the solid line at the base of the chart. Keeping your weight on your foot, relax your toes. The line that touches your longest toe indicates your size. The shorter lines in between the numbered lines indicate half sizes. Since many people have feet of different sizes, it's important to measure both feet. You should purchase shoes in the larger of your two sizes. For Women, subtract two sizes to your measured size. For example, if you are a woman and your measured size is a size 7 you should order a size 5.

For shoe sizing accuracy, you must print this document on 8.5"x11" paper at 100% (full size). Place a credit card or drivers license in the box below to check for correct scaling. If box is larger than the credit card, reduce printer scaling to less than 100% until the box size matches a credit card size. If the box is too small, increase printer scaling above 100% until the box is the correct size. Align the bullseyes on the bottom of the first page with the bulls eyes on the second page and tape the pages together at their intersection so as to create an accurate ruler on the left side of the shoe sizing tool.

**ACCURACY CHECK:**  
To ensure correct printing size,  
place a credit card here. If it fits,  
the chart was printed correctly.

**PLEASE NOTE:**  
Women must  
subtract two (2)  
sizes from their  
measured size!!  
For example: if  
your measured  
size is a size 7,  
order a size 5.

**REMINDER:**

Take off your shoes  
to measure your  
feet.
