

Care and Maintenance for GG L6T Ladders

To ensure longevity of use on your L6T Ladder, rinse with freshwater, and spray a protective lubricant on the exposed stainless steel components after each use. Even the best stainless steel can corrode and rust over time if saltwater is allowed to remain on stainless steel. This can be done with any low viscosity marine lubricant such as Boeshield T9 or Citrisurf 77. Both these sprays have cleaning and protecting qualities to fight the harshest environments. Failing to wash or protect the ladder will lead to product failure and potential to void the warranty.
