

# FAMILY-FRIENDLY LEATHERS

Durable and the easiest to upkeep. Corrected and lightly corrected leathers are pigmented and have some type of grain embossing on them to create a unique design. Such leathers are “Protected” with a protective finish which makes maintenance a breeze. Corrected leather tends to have a more uniform look as its natural grain structure is smoothed down. Compared to corrected leathers, lightly corrected leathers preserves more of its natural grain structure and will show more of its natural characteristics. It is important to note that while natural markings are minimised, it is still expected that leather natural characteristics like variation with the hide, scarring and marks may still be visible as it is a natural product.

# NATURAL LEATHERS

Made from the finest hides. The leather are either full grain semi-aniline or full grain aniline leathers. The natural look of the leather is carefully preserved to retain the luxurious buttery hand feel thereby making the leather extremely supple and the natural characteristics more pronounced. The milling process will bring out the leather's natural grain patterns as part of its surface design. In this category, some will still come with a light protection for easier maintenance. Natural leathers as its names suggests embodies the fullest natural qualities of leather to preserve its superior quality. Such leathers require more tender loving care and will appeal to passionate leather lovers who appreciate the finer things in life.
