## Special Dedication

First of all, I would like to thank all my students and those who bought my first book *Internet Millionaire Mindset*. They were the ones who constantly inspired me to bring my second book to life. To all my students and readers, thank you very much from the bottom of my heart!

A big thanks to my parents, especially my Mom who consistently makes sure I'm doing fine in terms of health. She would always remind me, "There's no point in being wealthy if you are not healthy." I love you, Mom.

I would also like to thank Adrian and his team from Kanyin Publications for their great and professional effort that made my second publication possible.

## Testimonials from Derric's Students

I did a lot of research on where to learn about Internet Marketing or Online Business and I finally zeroed in on Derric Chew. There were a lot of testimonials from his ex-students who have succeeded with their own websites. I signed up for his boot camp where I was taught the process of building my own Online Business and the various methods to identify opportunities globally. All these were hands-on sessions and I was given step-by-step notes to follow.

After completing Derric's boot camp, I created my own Online Business and began generating traffic to my website and within a few months, I managed to achieve RM7,000 to RM8,000 in sales per month. That's not all - I now have many repeat customers. With what I have learned from Derric, I am anticipating a monthly sales increase between RM14,000 to RM16,000 pretty soon. I find Derric to be a good teacher who can impart what he knows about making money through the Internet to those who are interested in doing so. I would strongly recommend him to anyone who is interested in Internet Marketing or Online Businesses.

Lim Choon Yang  
[www.LadiesOnlineFashion.com](http://www.LadiesOnlineFashion.com)

---

You may wonder after attending Derric's course, "Is it really possible to start an online business?" The answer is 'YES' because I have done just that.

I started with zero knowledge of Online Businesses but after attending Derric's courses, I managed to build my own Online Business within a couple of months.

Don't expect any spoon-feeding from Derric; you are not going to get it. Instead, he will push you to the limits to give of your best, to stay focused and to remain positive-minded all the way.

His "PUSH" makes me say to myself, "I will have my Online Business up and running no matter how tough it gets," and with the knowledge gained from him, and from me, total commitment, patience, perseverance, and most of all, belief in what I can do, I am now the proud owner of an online boutique with consistent sales coming in every month.

Wendy Chang

---

Before I got to know Derric, I have been trying hard for years to figure out on my own how to make money online. Unfortunately, I didn't do too well. However, after I completed Derric's Online Business Boot Camp, I managed to build my first Online Business within three weeks and within a month, my Online Business started generating income. Now, my Online Business has generated me a comfortable four-figure income, and I look forward for more.

The secret lies in the way he teaches - students work on their laptops in his class, giving his lessons a very

'hands-on' and practical touch. Students will not be crammed with too much information - just enough to start an online business on their own.

The relationship doesn't just end at the course, Derric consistently gives tips and support to his ex-students - just ask for it and he will do his best to help. If you have doubts about Online Businesses, stop them. If I can, I'm sure you can too. Sign up for Derric's boot camp, discover the wonderful world of Internet Marketing, and make your first million online! See you on the other side!

Nigel Ong

---

I started out with no knowledge or skills in Online Business. After attending Derric's full boot camp courses on Online Business, my understanding of how you can succeed online literally shot through the roof!!

Derric is a passionate trainer and very down to earth. He conducts his courses with a hands-on approach. In fact, after the courses I was able to generate over RM45,000 in Internet sales for a company during the first year! I'm looking forward to doubling or tripling that in the next one to two years.

Ivan Chang

---

First of all, I would like to say, "Thank you" to Derric Chew for his awesome course on Internet Marketing! I was a complete newbie when I followed his step-by-step guidelines and was able to create a website within a day. Derric's training was indeed fascinating, especially on Search Engine Optimization (SEO) techniques. I applied SEO techniques and was able to get my website ranked on the first page of Google in less than a week! That's magical and truly amazing.

Furthermore, Derric is the first trainer I've met in any field who is so committed to his students that even after the training, he continues to mentor us by giving comments and constructive advice on how to improve the websites that we have built. In addition, the tools and software that he has provided are really useful and some are real eye-openers. I don't think I would have been able to discover them on my own.

So, my advice to newbies is to learn from the Guru himself, Derric Chew, and you will be able to leap many years ahead in your Internet Marketing or Online Business!

# Preface

---

## Preface

After completing my first book “Internet Millionaire Mindset” in the summer of 2012, a voice inside my head told me to produce a second book as its sequel. This second book is ideal for those who have read my first book or those who have fundamental knowledge in Internet Marketing/Online Business. It is also ideal for those who intend to move on to more advanced Internet Marketing/Online Business skills and are really serious in their quest to design a whole new exciting lifestyle for themselves. I think this is a lifestyle with financial and time freedom that anyone would welcome with open arms. Thus I decided to take on the challenge that gave birth to this second book one year later, which I aptly named “Internet Millionaire Mindset 2 - Digital Empire Millionaire.”

I am very excited about this book because it is my second book. I was very proud when I published my first book a year ago, and now to have my second book published, I feel like I am on top of the world. That excitement is really inexpressible. As I have found my million doing online business, now is the time for me to give back to society gradually by producing this Internet Marketing/Online Business manual to help others like you to earn some serious life-changing income via setting up your own online business. Many people out there may still be stuck and struggling with their rat-race salaries

trying to make ends meet and may not realize that they do have a choice to opt themselves out from their present situation. Indeed, they must make a choice for themselves while I am providing a tool for them to work their way up to success. Strictly speaking, I am not the inventor of Internet Marketing/Online Business for that matter. I am just a facilitator to guide you into the correct path or rather golden pathway to riches and freedom – a path that I have already been through myself.

I am far from done in teaching you with my first book as it was just the beginning back then. Now with this second book of mine, I can say with even more confidence that you will be more complete and ready to start earning some real online money for yourselves with the materials that I have covered within this book.

Many people may not realize that there is an avenue for them to make a living with Internet Marketing/Online Business. Most of us have fixed our minds with the thinking that working for other people or doing a conventional high-risk, brick-and-mortar business is the way to live. If you do not change your mindset now, you will live a miserable life earning a pathetic income doing a job that you hate most. So why not give yourself a chance and test out this Internet Marketing/Online Business model which has boundless potential in terms of earning capacity with low and minimal risk that will not lead you to bankruptcy as compared to brick-and-mortar businesses. Well, you may be doubtful and feel worried if Internet Marketing/Online Business is something new

to you. There is nothing to lose as the risk is very low and you will not lose a huge amount of money doing it. Secondly, there are many living examples out there who have made it with Internet Marketing/Online Business and I am one of them! Finally, I would like to take this opportunity to thank everyone involved in this book project including my publisher Kanyin and especially to the one who is picking up this book and reading it.

---

# Introduction

---

## Introduction

Welcome all to Internet Millionaire Mindset 2 - Digital Empire Millionaire. Before I begin, let me answer one simple question that might be hovering in your mind. No, it is **not just another Internet Marketing/Online Business manual!** This book was written especially for hungry people out there like you, who want to make Internet Marketing/Online Business their **ticket to financial freedom.** I am producing this book after seeing the need for my students to get a more updated version of what the Internet Marketing/Online Business world has to offer. Internet Marketing/Online Business is indeed a very fast-paced subject, ever changing and evolving every day. Just like my first book, Internet Millionaire Mindset, we will begin our exciting journey in this book by covering the most crucial of all points that will virtually bring you to the half-way mark of your soon-to-be-successful journey. I am introducing **more powerful mindset success theories** for you to make use of in your Internet Marketing/Online Business journey. Most people have underestimated the power of having a strong and positive mindset when they begin their online business, thinking that it is the idea and the Internet Marketing/Online Business skills that they have which will propel to a successful business endeavor. Unfortunately, 9 out of 10 - if not all - who go into this online venture without a proper mindset will find themselves at the knockout corner of the ring! They

will fail miserably without even realizing what had struck them! That is why I emphasize highly on equipping oneself with a strong, rock-solid mindset prior to commencing your Internet Marketing/Online Business journey. I have two chapters solely on Mindset which takes up 20% of the book - a double dose of success potion just for you!

We then move on to cover some **exciting business models** that will help you to decide which type of business you prefer or which would suit you the most. Different people have different interests in different things. Some may like to sell existing products, others might be motivated to create their own merchandise while the rest may like to educate people with their membership sites. It is entirely up to you to decide. This is followed by a chapter on **how to discover highly-lucrative niches** that will make your online business cashing with money non-stop. The book is great in terms of the content flow as we move from equipping yourself with a strong mindset to deciding what business model to embark on, followed by identifying a lucrative niche for your online business. I will then take you on a **comprehensive strategic planning** stage whereby you will learn some marketing strategies, effective web design, the all-important SWOT analysis, how to model other successful Internet Marketing/Online Business People and some advanced web development as well. The book will provide some **marvelous action plans** for you to lock in your success as you reach the middle of the book.

We will learn more about Search Engine Optimization or SEO - what Google likes, and other advanced SEO techniques in which you can use to your advantage. This is followed by a whole chapter on selling as I feel that you will never be a good Internet Marketer unless you know how to sell and **sell your way to success**. I will teach you how! Then, we will touch more on NLP in Internet Marketing/Online Business. There are some **very powerful secrets on what NLP can do to your Internet Marketing/Online Business** which I will reveal in this book. Dive into the book and find out for yourself! In this book, I have dedicated an entire chapter talking about **the power of social media** in Internet Marketing/Online Business. In this chapter, you will discover various marketing techniques that people have been using in social media services like Facebook, Twitter and LinkedIn. I have also included two latest additions to the social media family which is growing so quickly to a point of overtaking the 3 giants in social media. Again, you have to dig in to find out.

I end the book with a closing chapter of even **more money 'ka-ching-ing' marketing techniques** that you can use to boost your online success. Some of which you may not have heard of prior to this. I have added some **important steps in the techniques** so that you can follow and use in your online business endeavor rather than just reading and knowing without learning to apply practically. This is what I truly emphasize in both of my books. I want the people who read my book to not only have head knowledge but able to use the

information I have provided by applying it practically in their online business thus achieving success. I don't want my book to be a NATO book: NO ACTION, TALK ONLY! ***Only actions will give birth to results!*** Without action, all these words will amount to nothing. Finally, I'm taking this opportunity to congratulate you on taking your first action in getting this manual to guide you to your Internet Millionaire Mindset 2 - Digital Empire Millionaire. I'll see you later in the book!

Internet Marketing - Mindset I  
: The Essential Success Ingredients

---

## Understand What It Takes

Internet Marketing entails the promotion and selling of products or services over the Internet. Because of the sheer volume of people using the Internet nowadays, that is, around 1.8 billion worldwide, opportunities for doing Online Business are virtually limitless. News and publicity about Internet gurus and some ordinary people who earn up to seven-figure monthly incomes with rich-and-famous lifestyles have got many people excited and have made them want to get involved in this business too. Little do they know that Internet Marketing/Online Business is not as simple and easy as the Internet Gurus make it out to be.

Why is that so? We can see that more and more people are embarking on Internet Marketing/Online Business recently, hoping to make a quick buck. However, most of them resort to giving up after a few months when they cannot see actual or sustainable money being made.

You may ask, "Why do they fail?" or "How come some of them are so successful but yet many cannot make it past the first hurdle?"

The answer lies in the Mindset of the Internet Marketers themselves. Most people start their Online Business with a Mindset that they are just trying it out. With this uncertain Mindset, they are bound to give up when they face difficulties. This is mainly because they are not committed to what they are doing. People with committed hearts will do whatever it takes to succeed. They may face failure the first time, second time or even up to the tenth time. The point is that they never give up. This is the mentality that one must have: if I fail this time, I will be a step ahead when I try again as I have learnt something from my previous venture.

With this never-give-up attitude, one will always try to find a solution for whatever problem one is facing. For example, Thomas Edison, the inventor of the electric light bulb, failed over a thousand times before he finally succeeded. If he had given up after only a few attempts because of failure, I think the world would still be using candles or oil lamps to light up their homes. The moral here is that when you start your Online Business, never give up so easily. Understand what it takes to be successful.

Most of the successful Internet Marketers worked hard at the beginning of their career and have usually met

failure more than once. One Internet Guru that I know had dedicated four hours daily after his day job to study and research how to make his Online Business better than anyone else's! Every day, he would come back from work, have dinner, fulfill his family commitments and then start working on his laptop. He did this from 11:00 p.m. to 3:00 a.m. every day at that time.

I guess he must have made tons of mistakes and met with lots of failure in the process before he actually saw money being generated from his Online Business. With his credit card debts and monthly commitments mounting, he had created a hunger within - a hunger for success.

That hunger was so great and intense that no obstacles could stop him from moving forward. That motivation and burning desire to have a better life for his family and himself kept him going for a period of five years before he finally won success. So you can see that setting up an Online Business is not a one-or-two-day affair. Do not expect to see success overnight.

## Master Your Mind

Master your mind or your mind will master you. What does this actually mean? Well, almost 95% of people in this world let their minds control what they do every day. They are like slaves to their own thinking and beliefs. Many of the not-so-well-off people have been influenced at a young age predominantly by their parents to think that studying hard and earning a degree in their studies is the key to a well-paid job and secure future. Little do they know that they have set a trap for themselves, which is the rat-race trap of society! After they are trapped inside this ever-revolving, working-for-somebody cycle, it is very hard for them to come out of the cycle as there will be lots of issues in their enslaved minds such as, "if I start doing Internet Marketing/Online Business, will the income be able to sustain my current living expenses?", "What if I fail and lose a lot of money?", "I won't be able to compete with all the existing big guns anyway?", or even "I haven't got the expertise to start such an unstable business." The questions may go on forever. All these limiting thinking will go on to prove that you are the slave of your own mind!

So why don't we snap ourselves out from this limited thinking pattern and wake up to a whole new set of beliefs and possibilities? As the old saying goes, 'what we think is what we become'. Just imagine if the late Steve Jobs thought like the 95% of us, well, we may not be using any iPhones or iPads today. In the same way, I will not be using Bill Gates' product to write this book and will still be using a manual typewriter instead. You may not have heard of any Warren Buffett, let alone be reading about his remarkable billionaire life journey as a stock trader in his memoir. If college dropouts like Bill

Gates can start a mega billion empire in the name of Microsoft, why do we think it is impossible for most of us who are better educated than Mr. Gates, to do the same thing or even better things? The secret lies in our own minds. If we believe we are capable of achieving great things in our lives, we will inevitably send a signal to our mind, telling it to do what we want and be a slave to us instead of the other way round. The mind then, upon receiving orders from the master - which is us - will start to form positive mental pictures, which lead to the urge to generate valuable ideas, goals, plans and actions. These chain reactions will cause a positive physiological vibration in the form of taking non-stop actions, a strong willpower to face any failures and a higher intellect to solve any problems that we might encounter until success becomes a reality to us.

As we can see from above, when we take control of our minds, all things become possible. We are basically allowing our minds to function in the most positive and optimum way and this will let us achieve things that we never believed was possible before. Let us look at how powerful our minds really can be. There was once a test carried out in a hospital on the effect of the patient's belief system to their healing speed. A group of high fever patients were informed that they were given a strong medicine that will cure them in just a few hours. Little do they know the super medicine they took was in fact just sugar pills. Another group of patient was given actual, normal fever-relieving medicines. The result shown was astonishing. Patients who were told that they were having miracle pills in fact recovered from their fever faster than those having the actual fever-relieving

medicine. This shows that when a patient was actually made to believe that they are taking super medicines, their own positive self-belief will actually boost their body immune system and thus recover speedily.

The example above really gives a wake-up call for us to start mastering our own minds and take control of our lives in the direction we wish to go. So why not let this Internet Marketing/Online Business journey be a fruitful one and always believe that you can do it!

## **NLP in Internet Marketing**

People would always say, "Be Positive," as advice for starting a business. Well, today I am going to teach you a really powerful technique to succeed in business. It can change your Mindset from the most negative ever imagined to a perfectly positive one which will spur you on to achieve greatness. Have you heard of Neuro-Linguistic Programming or "NLP"? NLP is the study and modelling of best human behaviour. In layman terms, it means observing the behaviour of people with excellent qualities or results in order to mimic them. In this way, our inner resources are realigned and we are thus able to produce the same results as these people did.

The most basic requirement for success in Internet Marketing/Online Business is to have a brilliant idea. As the old saying goes, "Ideas make money." So the question is, how do I come up with good ideas? Can creativity be learnt? Here is how you can tap into creativity using NLP. We have to relax ourselves to the point where our

mind is in 'alpha state'. The alpha state of consciousness allows us to tap into our amazing capabilities including creativity.

Every Internet Marketer would love to know how 21-year-old college student, Alex Tew, got his Million Dollar Homepage idea. This boy made history by selling his 1 million pixels at \$1 each in a website he created. And yes, he got his idea when he was lying on his bed relaxing well into the night on one warm, summer evening in August 2005. Relaxing and controlling your breathing pattern can help to bring the best out of you!

Most Internet Marketers will experience a feeling of having lost all hope when they do not see any money coming in despite the amount of work they continue to put in. All these are only in the mind. When people have worked hard for something but do not see any visible results they tend to have a negative perception of what they are doing. If this is not corrected immediately, it will lead to failure. Well, this negative habit can be changed by using NLP.

First, we need to identify the problem that we are facing. For example, it could be the feeling of drowning because we have lost hope. Then, we assess the trigger for this

feeling. It could be the realization that our finances are low or that we are running out of money. We then have to stop thinking about this negative trigger and rather, focus on what we want to achieve instead. For example, to be a successful Online Business person who enjoys financial freedom. We now use the “Swish Pattern” to make the transition from the negative trigger to the desired state. With this method, we can get rid of our negative unconscious state and replace it with a desirable one.

NLP persuasion skill is a very powerful technique that involves the profiling of prospects and creation of responses that cater to the individual’s personality. With this personality profile, we can generate persuasion patterns that are targeted to specific prospects which will lead to a higher conversion rate. Utilizing this technique in your e-mailing list is extremely effective because your targeted prospects will be educated frequently by your emails. As this continue, their willingness to trust and buy your products will grow even more.

## Learn The Basics

When we start off in Online Business, we should always begin with the basics. No Internet Marketer in the world commences business by applying advanced Search Engine Optimization to his website, using Cascading Style Sheets in his web page presentation, or even utilizing NLP in his sales page write-up. As the old saying goes, we must learn to crawl first before we can walk. Learning the basics of Internet Marketing/Online Business will give us a strong foundation and a better understanding of the subject and therefore a strong Mindset to prepare for more advanced knowledge later on.

Starting with the basics is like laying the groundwork and pillars of a skyscraper. Skyscrapers are tall buildings. The higher they go as another storey is added, the more pressure is put on their foundation. If the foundation is weak, it will eventually give way and collapse as it cannot support the mounting pressure being added on.

The same goes for Internet Marketing/Online Business. If one is too eager to apply all the advanced marketing tools like SEO, CSS and NLP, one may end up getting nowhere as one's understanding of the application of such tools may not be good enough yet to make full use of them. Thus, when one uses these advanced marketing tools but experiences no great improvement or good results, one's mind will receive the wrong signal that these advanced tools do not really work despite the hype. Imagine trying to drive a Ferrari without having a driving license!

Before you start, you should equip yourself with the basics like understanding what a domain name and hosting are and how they are inter-related as well as where to get them at a cheaper rate. This knowledge will help you save on cost and will build your confidence and enthusiasm to carry on. This is the time to learn things like how to add a payment button, insert an opt-in box, add photos and videos to your website, create blogs, write articles for your website, and more. All these make learning fun as you progress from basic to advanced level.

Without knowing the basics, simple problems such as not being able to see the photo you inserted or having faulty links will become major problems for you. You will end up thinking that operating an online business is a tedious mission and full of headaches for you. Thus, you have programmed yourself to think negatively about online marketing.

However, if you endeavor to learn from the beginning, you develop a positive Mindset: you will then be like a dry sponge, ready to absorb anything related to Internet Marketing/Online Business that comes your way. This is a good thing as stepping into Internet Marketing/Online Business can be a daunting experience since there are tons of things to learn. So, learning the basics is like getting ready for bigger and tougher things to come, preparing your mind to handle more difficult and hard-to-tackle elements in the world of Internet Marketing/Online Business.

## **Add To Your Knowledge**

A Positive Mindset is crucial to your long-term success in Internet Marketing/Online Business or in any field for that matter. Why is that so? Well, according to Mortimer Adler, "The purpose of learning is growth, and our minds, unlike our bodies, can continue growing as long as we live." Imagine what our world would be like if people stopped learning after kindergarten. If we do not constantly add to our knowledge, then we have stopped learning. In Internet Marketing/Online Business, the more we learn, the more equipped we are and the better our chances of seeing success.

When we have learnt the basics of Online Business, yes, we can start an Online Business by building a website or a blog. But how far can we go? We will eventually see a brick wall in front of us. Before that wall even comes into existence, we must provide our brain with the necessary knowledge to make sure it never comes between us and our business. In Internet Marketing/Online Business, it is important to learn the essentials like Traffic Generation, Website Optimization, Keyword Selection, how to apply NLP in sales letter write-ups and so on. Of course, one might say that we can hire people to do these tasks for us but not everyone has the financial luxury to do that. Even if we do have the money to do so, we are only using our financial power to stop us from learning more. We will never be in full control of our Online Business as our understanding of how Internet Marketing/Online Business works is virtually that of a kindergarten child!

We must understand that Internet Marketing/Online Business is a constantly changing business. In the early days, merely getting Traffic to your website is considered success. Today, we must know that attracting Traffic to our site is not enough. We must know how to increase

Traffic, get quality or targeted Traffic, and maximize the Traffic generated. If we do not learn how to do this and rely only on randomly-generated Traffic, we will not go far in Online Marketing. Quantity is not the only factor for success. That belief is a misconception that may lead us to a dead end, and we may quit as a result of not seeing money generated after the effort we have put in.

The dynamic nature of Internet Marketing/Online Business makes it a very challenging way to do business. Marketers who do not keep up to date or who are still using outdated methods may lose out eventually.

The learning curve you encounter may play a big role in your Internet Marketing/Online Business success. Initially, when you start learning about Internet Marketing/Online Business you may find it hard going. But after a while, when you have accumulated enough

knowledge, you will find that learning and absorbing new information become easier. This is why it is very important that you continue to add to your knowledge when your absorption rate is at an accelerated stage. This will help you to take full advantage of the learning curve and harness your full potential in Internet Marketing/Online Business.

## Keep The Momentum Going

Momentum is the force or energy with which an object moves. The greater the force or energy within the object, the more powerful the momentum of that object and thus the faster it will move. If the force or energy exerted by the object is reduced, it will lose its momentum and hence its travelling speed. Let us look at this concept in terms of starting an Internet Marketing/Online Business.

When we first started our Internet Marketing/Online Business, we will inevitably encounter some problems, make some mistakes, face multiple failures and more. Once we get the hang of it and see some small results, this point in time is extremely vital for us to keep the

momentum going. Why is this so? Well, it is because at this point, your knowledge and hands-on experience are at its best. 'At its best at this point' means they are still 'hot from the oven' and not that one is as good as a millionaire gurus or anything like that. The point is, while knowledge is still fresh in your mind, your momentum and energy level are still at the highest level. It will be much easier for you to move on to the next level and the absorption of much more complicated information will be at its best. This is because the distance from your current level to success is much nearer compared to the time you began your Internet Marketing/Online Business journey. The momentum will propel you forward to that jewel of success that you so dearly wanted.

The other side of the story is when you slow down or temporarily stop at what you are doing, either because you wanted a break, or some other opportunities have grabbed your attention which you think can lead you to financial freedom even faster. Well my advice for you is **DON'T DO IT**. Just stick to what you are doing until you encounter success. It is much easier this way than starting all over again with something new. Why is this so? It is because when you slow down or stop doing something for a while, you will lose your momentum and your energy level will dissipate with time. Once you have stopped for a long-enough period, you will find that when you get back to your Internet Marketing/Online Business, you will forget a whole lot of things and information. You may forget how to update your outdated blog, how to SEO your website to regain top rankings in Google or you might even forget your WordPress password! Sounds familiar? You will find that pushing a stationary car is much harder than moving

an already-rolling vehicle. You need some time to accumulate the knowledge and information you have forgotten to be able to regain the momentum to move on. You may not even be able to get back to that energy level you once had since your hunger and enthusiasm would have dropped as compared to the time you just started and are highly motivated.

Let me tell you an interesting fact. Usain Bolt (our current 100 meter world record holder of 9.58 seconds) ran his 100 meter starting from 0 mph in speed and accelerated up to 27.3 mph (44.17 km/h) at the end of the race. He reached his top speed at the 65 meter mark which is around 5.3 seconds into the race. This means, he ran the next 35 meters to the completion of the race in 4.28 seconds using his momentum effortlessly. We can tell how hard he worked by his facial expression in the first 65 meters. The significance of this information is that when we do our Internet Marketing/Online Business, we must maintain our momentum and keep it going till the end. In this way, we can capitalize on the driving force to work towards our success in a much faster fashion. Slowing down or stopping will only lead to delays and procrastination which may hamper our road to success altogether.
