

CONSTRUCTION

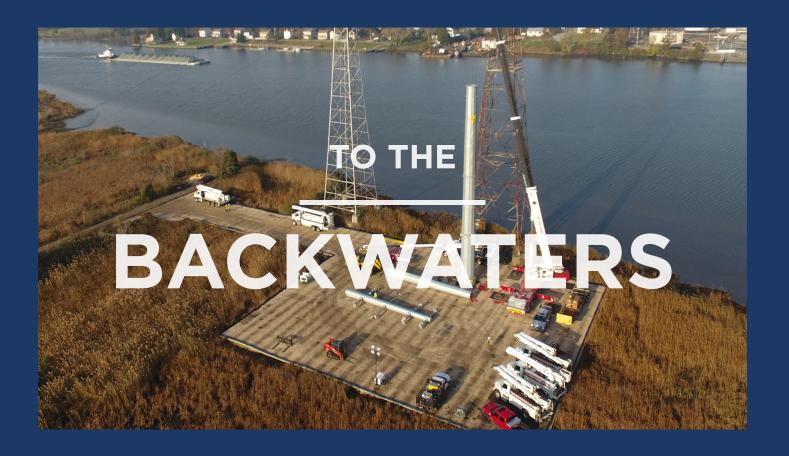

We've Got You Covered

Protect your job site and personnel with the world's strongest, safest and most durable ground support composite mats.

Get your heaviest projects done safely, quickly and efficiently. Whether a temporary road is needed in a remote area or a stable working platform is needed in the mountains, trust that you will have reliable access to worksites in extreme conditions with Signature's composite matting.

Unlike wooden mats, Signature's construction mats can be used for many years, are environmentally friendly, easy to clean and eliminate the possibility of cross-contamination between worksites. Signature Systems' durable composite mats can bear a weight load many times that of wood and will not splinter, rot, warp or crack.

Signature Systems Group engineers, manufactures and distributes heavy-duty composite matting for a wide range of construction applications. With fast installation and dismantle times, easy clean up, and reuse for many years, Signature products provide a significant return on investment.

Create virtually indestructible temporary roadways and working platforms with Signature's composite matting.

MegaDeck®HD

Heavy-duty composite matting for high-traffic, heavy load worksites

Size: 7.5 ft. x 14 ft. x 4 in. thick Weight: 1,095 lbs. ea. (496.7 kg ea.) Load Capacity*: 4,500 tons / 600 psi Shipping: 40 mats per truckload

SignaRoad®

Medium-duty composite matting for portable roadways and platforms

Size: 6.8 ft. x 10 ft. x 2.5 in. thick Weight: 500 lbs. ea. (226 kg ea.) Load Capacity*: 1,950 tons / 400 psi Shipping: 90 mats per truckload

DuraDeck®

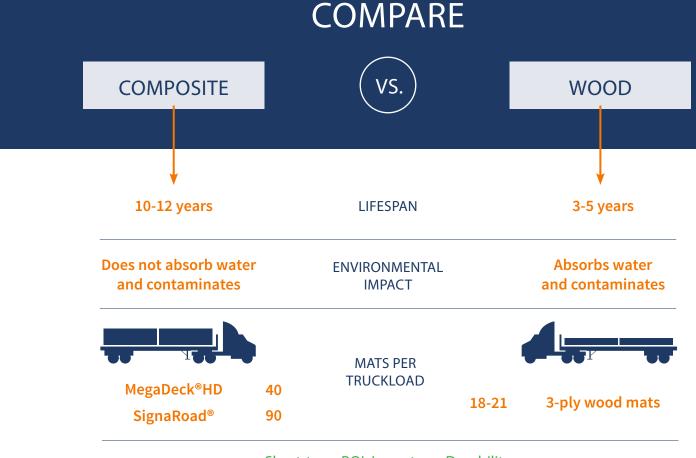

Light-duty composite matting for instant access and site protection

Size: 4 ft. x 8 ft. x .5 in. thick Weight: 90 lbs. ea. (40 kg ea.) Load Capacity*: 80 tons / 200 psi Shipping: 30 mats per pallet
