

LTO Ultrium 9

Max Capacity : 45TB (18TB uncompressed)
 Max Transfer Rate : 1,000MB/sec
 (400MB/sec uncompressed)

Magnetic tapes are attracting an increasing attention as storage media that provides long-term storage of large-capacity data safely at low cost. In addition, it has a significantly lower environmental impact as there is no need to have it constantly powered on during data storage, thereby mitigating the amount of CO₂ emissions generated during data storage by 95%^{*1} compared to hard disk drives. The high capacity, achieved in “FUJIFILM LTO Ultrium9” , caters to the surging data storage demand amidst the rapid development of IoT technology and acceleration of Digital Transformation, and contributes to mitigating CO₂ emissions, an urgent task that must be addressed globally.

Large capacity

BaFe magnetic particles measuring only about 20nm, allowing a large number of particles to be laid on the same surface. This significantly increases an areal recording density, thereby dramatically boosting the tape's storage capacity.

Long-term storage

While the primary cause of magnetic degradation is oxidation, as BaFe magnetic particle is already a ferric oxide, it does not suffer oxidation. This is why BaFe tape offers superior archivability. The accelerated test^{*2} has shown that the tape offers stable data storage for more than 50 years.

^{*2} According to the Tape Storage Technical Committee of JEITA (Japan Electronics and Information Technology Industries Association)

Low Cost • CO₂ emissions

Compared to hard disk storage (HDD), LTO tape storage has superior cost performance and achieves CO₂ emissions reduction as it provides lower cost per TB and requires almost no electricity in storing data.

Safety

Tape can physically isolate data from the network to create an air gap, minimizing the risk of data loss due to cyberattacks, securing your important data.

System or data damage by computer viruses

Sudden system shutdown or crash

Evolution and future of LTO tape technology

Magnetic tapes are expected to achieve even greater capacity increase.
At present, a roadmap toward 144TB (LTO12) is planned for LTO tapes.
