ProMedia Cabinets
Data Media Storage Cabinets

ProMedia Cabinets are the result of years of engineering refinement designed specifically to address the unique needs of storing small media. ProMedia Cabinets are designed to store LTO tapes with or without jewel cases. All Russ Bassett ProMedia Cabinets are equipped with fully interlocking drawers, allowing only one drawer to be opened at a time, preventing accidental tipping.

ProMedia Cabinets have a heavy duty all-welded box construction to assure years of lasting service. Internal structure consists of an all-welded frame at the front, made of internal structural, vertical and horizontal hat sections. The four top corners are welded closed, ground and sanded to form a smooth, seamless corner. End panels and back panels are formed with offsets to eliminate raw edges where they attach to mating parts.

A recessed drawer-pull is integrated across the full width of the drawer front for convenient access. Precision ball bearing slides are provided to support load and maintain years of smooth operation.

All materials and construction meet the U. S. National Archives specifications.
