

Reduce Costs, Increase Profits!

Using an in-house nitrogen generator to supply your nitrogen gas demand is the easiest way to reduce nitrogen related costs, and thus increase profits. The Niagara™ Series of Pressure-Swing Adsorption (PSA) nitrogen generators has been designed to be the most efficient, reliable, and durable nitrogen generator available. With a rich list of features and available HoltecConnect™ communications and troubleshooting portal, Niagara™ is the workhorse of the Pressure-Swing Adsorption world.

Major Features:

- Industry leading purity options, from 95 - 99.9995% (5% residual O₂ - 5 ppm residual O₂)
- Low power consumption - lowest compressed air consumption reduces compressor horsepower, reducing customer electrical costs
- Modbus TCP/IP standard for connection to customer controls
- HoltecConnect™ and EnergyAssistant™ compatible
- **New!** - Holtec Prevue™ technology allows fast observation of average product purity
- Molecular Sieve - "The active ingredient" lasts 10+ years with proper maintenance
- Adsorbers designed for 20+ years life
- Durable mechanical valves - 2 ½" and below rated for 5 million cycles (10+ years), 3" and above rated for 3 million cycles (6+ years)
- O₂ analyzer with zirconia sensor - Long sensor life, does not need calibration
- Tamper resistant controls and password protected screens

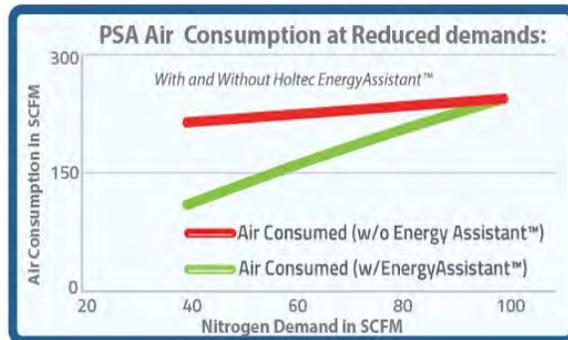

Energy Assistant™ - Savings tailored to the customer need

A Holtec PSA consumes the least amount of compressed air (and therefore the least amount of electricity). This is because we use only the highest quality, most efficient carbon molecular sieve in our PSAs. The PSA will also detect when you are not using any nitrogen and stop, using no electricity at all.

But what about when you are using something in between? Traditional PSAs systems will consume nearly the same amount of compressed air whenever they are running, regardless of the customer's actual demand.

EnergyAssistant™, built into every Niagara™ PSA, adjusts on the fly so the compressed air demand decreases at a nearly 1:1 rate with your nitrogen usage between 40%-100%. Even below 40% of full capacity you will experience significant energy savings. With EnergyAssistant™, customers whose demands vary will now maximize their energy savings in all usage profiles.

HoltecConnect™ - Remote gateway for monitoring and factory support

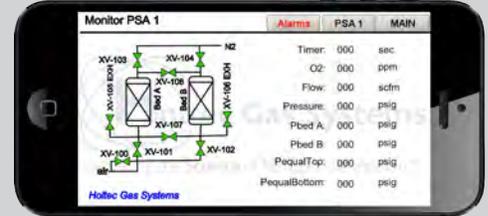

HoltecConnect™, available on any Niagara™ PSA system, allows any user with security clearance to access the nitrogen generator vital statistics through a secure connection from a web browser any where an internet connection is available.

Your authorized Holtec dealer can use this powerful tool to continuously monitor the nitrogen generator for you, averting downtimes and freeing up your manpower to concentrate on your primary business.

Easily disabled for added security, HoltecConnect™ is not just for monitoring. With additional sensors throughout the nitrogen generator, this gateway gives factory personnel the ability to diagnose many issues without the delay and expense of a field visit. Many corrections can be made remotely, and when on-site visits are required, technicians are better able to assess which parts to bring in order to reduce follow up visits.

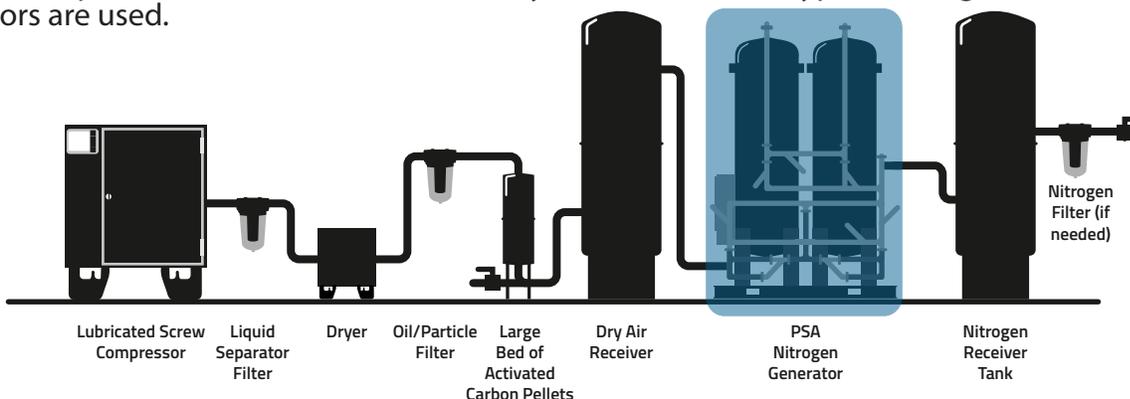

Other Capabilities include:

- Email alerts and warnings
- Text messages directly to mobile phone or tablet (without the need for a cellular modem)
- Real-time display of nitrogen purity, pressure, and flow
- Nitrogen generator START/STOP functionality
- Change process parameters
- View/Graph system performance (real-time and historical)

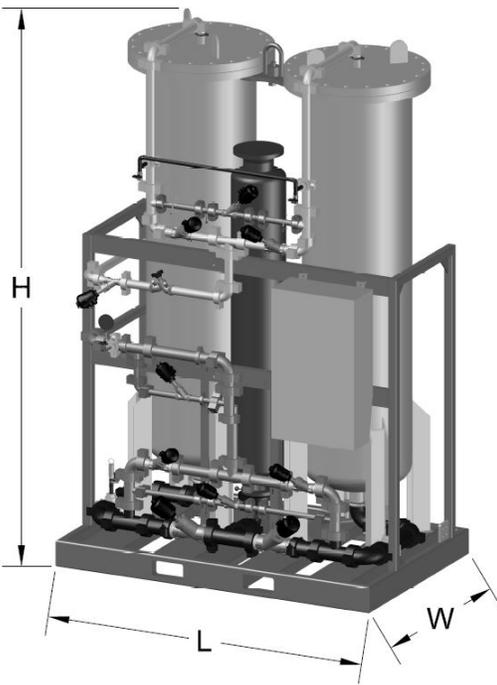

Niagara™ General Specifications

- 100 - 230V - 1ph - 50/60 Hz- max 120W
- Standard systems for Indoor use only (Outdoor option under sun/rain shelter available with control panel heater).
- Note that a fork lift is typically required at the destination unless otherwise noted. If a crane is needed at the origin or destination for larger systems, this is at the buyer's expense. Systems are shipped horizontally and partially disassembled; fork lift or crane may be required to re-orient and re-assemble.
- Clean, dry, oil-free compressed air (ISO 8573 Class 1.4.1 or better and an activated carbon adsorber tower must be used if the compressor is not of the oil-free variety). See below for a typical arrangement when lubricated screw compressors are used.

Niagara™ Physical Characteristics

(Dimensions in inches, weight in pounds)

Scope of Supply

- o ASME VIII Div 1 adsorber vessels filled with Carbon Molecular Sieve
- o Relief valves
- o Air actuated switching valves
- o Pressure gauges
- o Control panel with:
 - Terminal blocks supplied for hard-wired power connection (cannot be plugged into wall outlet included unless otherwise stated)
 - On/Off power switch
 - PLC control with touch-screen interface (HMI)
 - Switching for continuous or standby operation (HMI feature)
 - Operating hours recorder (displayed on HMI)
 - Electrical terminal blocks and wiring
 - Solenoid valves (for switching valves)
 - N2 pressure sensing transducer for automatic standby operation
 - Oxygen analyzer sampling system and oxygen analyzer and sensor
- o Manual control valves for setting N2 flow and purity
- o Manual isolation valves
- o Silencer for waste gas
- o Operating and maintenance Manual (digital only, unless otherwise agreed)
- o Fittings, Piping, and Tubing
- o N2 flow limiting device
- o All above equipment to be pre-assembled and pre-tested mounted on a painted steel skid for easy site installation and quick startup

| Model Number | Max inlet pressure (psig) | Inlet (in.) | Outlet (in.) | L(in.) | W(in.) | H(in.) | Weight (lb.) |

| HNS-4400M | 135 | 6 | 4 | 135 | 76 | 220 | 32,950 |

Notes:

* N2 pressure will typically be 25 psi lower than compressor outlet pressure (with reasonable pressure drop for filters included.) In some cases, lower pressure drop may be possible. Please consult factory for details where critical.
