ROGERS[®] Factory Service & Repair

Plant managers and business leaders turn to Rogers Machinery when seeking to replace their unresponsive service provider and when the cost of excessive down time has negatively impacted their bottom line.

Field Service

ROGERS[®] has a highly responsive and trained field service team that is always ready to serve your needs. They are trained to work on a variety of machines so they can get your system up and running with little down time.

Repair Shop

Our 100,000 square foot facility in Portland, Oregon is outfitted with all of the necessary tools to rebuild compressor air-ends, vacuum pumps, and blowers. If your compressor shuts down and it needs to be taken into the shop, we can send you a rental machine until yours is ready to go.

Factory Service Program

The factory service program takes the service obligations off your to-do list. You will no longer have to be concerned about missed service intervals, parts availability, or incomplete services. Most importantly you will eliminate unscheduled down time. Your facility will operate with higher energy efficiency and minimal interruption of your compressed air supply, which will save you money.

24/7 Service

ROGERS[®] has service technicians available 24/7 to respond to emergencies. They will troubleshoot your system and fix any existing problems.
