RE: FEC300SS, FEC500SS, FEC750SS Venting

To Whom It May Concern:

When installing a Cookshack Rotisserie Smoker (FEC300SS, FEC500SS or FEC750SS) the following items should be taken into consideration.

Local Code Officials and a Commercial Kitchen Ventilation Contractor should be consulted prior to installation. The unit must be installed per state and local fire codes and NFPA 96.

Provisions must be made for adequate air supply for the oven. If the oven is to be installed in a sealed room or building utilizing exhaust fans, the room must be supplied with a return air system. Return air must be equal to or slightly higher than that of the exhausted air.

If the unit is being installed under fire suppression we recommend that the fire nozzles be installed over the front door and the ash door on the unit.

Regards,

Stuart Powell
President/CEO
Cookshack, Inc.
