FGR 252 FRONT FORK

Upgrade your Yamaha and get the ultimate racing experience with the new Öhlins FGR 252 front fork for YZF-R1 and YZF-R6. Developed straight from Moto2 and World Superbike Championships, this fork delivers world-class suspension performance to help you outpace the competition.

The FGR 252 is designed for top-level racing in the Supersport, Superbike and Endurance classes and features new fork bottoms inspired by our Factory Racing Superbike forks. It's equipped with TTX technology to give you more control and superior handling, with spring pressurized TTX 25 internals giving more consistent damping characteristics.

The FGR 252 is adapted specifically for the Yamaha YZF-R1 and YZF-R6, with the same outer dimensions as the standard Yamaha front fork. Which means you can install the forks directly onto your bike — no modification required.

Push your performance to the next level and conquer the track like a Superbike pro.

This front fork is specially developed for racing use and should only be used on the racetrack.

FEATURES

- > TTX-technology
- > Spring pressurized internals
- > New Superbike-inspired fork bottoms
- > Low friction
- > Different settings available from Öhlins setting bank
- > Easy maintenance
- > Delivered with three different spring rates
