

# Epaderm<sup>®</sup> Cream

## An emollient for dry skin conditions

Epaderm Cream is a 2 in 1 emollient formulated with clinically proven ingredients that moisturise and soften the skin. It provides all of the moisturising and protective benefits of paraffin-based emollients and can be used for eczema, psoriasis and other dry skin conditions.

Epaderm Cream is especially effective if applied immediately after washing to counteract the loss of essential oils from the skin. It can be used on all dry skin conditions and is suitable for all ages, including babies.

### How Epaderm Cream works

Epaderm Cream is an emollient specifically for sufferers of dry skin conditions.

Epaderm Cream offers 2 in 1 relief as it can be used on the skin or as a skin cleanser.

Epaderm Cream creates a barrier which aids moisture retention within the skin. It is highly versatile.

### Alternative Epaderm Cream uses

#### Using Epaderm Cream as a skin cleanser

When caring for dry skin conditions, it is vital to ensure that moisturisation is carried out wherever possible. However, it is equally important that no soaps or products containing detergents are used as they will increase water loss from the skin.<sup>1</sup> Using Epaderm Cream as a skin cleanser ensures that dry skin can be properly washed, without losing additional moisture or having to deal with the problems that common soap additives might produce. Dispense a small amount onto your hand, lather under warm water and then use as a normal soap.

### Benefits of Epaderm Cream

- Epaderm Cream's barrier aids moisture retention within the skin
- Epaderm Cream can be used on the skin or as a skin cleanser
- Available in 50g and 500g
- Suitable for all ages, including babies
- SLS Free

### NICE guidelines for emollient use

NICE recommends that emollients should form the basis of atopic eczema management and should always be used, even when the atopic eczema is clear.<sup>2</sup>
