INNOVATIVE CRYOSTORAGE VIALS

Screw Cap Tubes (-200°C to 110°C)

BIOplastics Screw Cap Tubes are an excellent form of storage. They have a unique design, are made out of polypropylene and have frosted areas for writing and a plain, homogeneous low binding surface inside. Screw Cap Tubes are available in three different volumes: 0.5 ml, 1.5 ml and 2.0 ml. They are also available as conical or free standing and sterile or non-sterile. The screw cap tubes have a working range of -200°C to 110°C and can be centrifuged up to 20,000 g.

Screw Cap Closure Technology

BIOplastics Screw Cap Tubes offer Smart Secure Closure Technology. With this new screw cap design, the use of "old fashioned" rubber rings has become obsolete. It's performance is superior when compared to regular screw cap tubes. The absence of a rubber ring ensures that the closure is not affected when in contact with organic solvents and that no leakages will occur. The new Smart secure closure design allows frequent opening and closing, avoiding leakage even in extreme conditions.
