How to Attach a Monkey Link to a Horse Harness Trace

IVC Carriage

Slot end of the trace slips over the post of the monkey link.

Push the trace down on the post.

# This is how it looks from the side.

Push other end of the trace through the link between the post and the leather tab.

Pull the trace through the link to make a smaller loop.

The trace needs to be tight enough to slip snuggly over your roller bolt singletree.

The bottom will look like this.

Now you are ready to attach your traces around your roller bolt singletree.

These traces pictured are true roller bolt traces versus traces with monkey links, but the attachment is the same.
