SuperTrunk Installation Guide

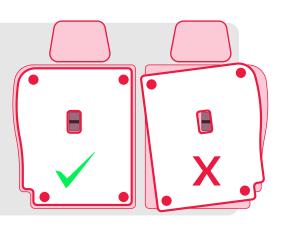

04 • Align Mats.

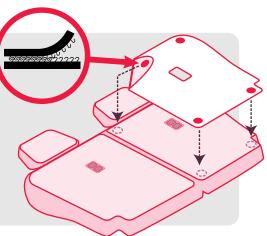

Prior to installing, place mats over seat to confirm proper location & fitment.

Make sure all cut outs align with their respective anchor points and that the mat accurately sits within the seats perimeter.

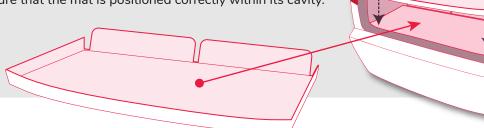

05. Install Seatback Mat.

Once you're confident with the alignment, remove the white backing from the Velcro Adhesive and apply pressure to secure the mat to the seat backs.

06. Install Trunk Mat.

Position the trunk mat in the appropriate position. Make sure that the mat is positioned correctly within its cavity.

07. Test Seat Movement.

Adjust the seatbacks to their original positions to ensure that there is no interference. If Seatback Mats interfere, re-adjust the mats to clear seat movement.
