On Site Breeding Services

We can provide artificial insemination of your female on our premises. Semen inseminated will be guaranteed to be alive and motile. Accurate timing of the female's cycle is crucial for success. Females staying in our home must come with their own kennel/crate, leash & collar, and food.

Fresh Cooled Semen

IMPORTANT CONTRACT INFORMATION: PLEASE READ!

We can ship fresh-chilled semen straight to your veterinarian or home with tracking. Semen shipped from us will be guaranteed to be alive and motile. If for some reason your veterinarian does not approve of the semen quality, your female must not be inseminated with the semen and you must contact us the same day of receipt of semen to inform us so we may arrange another shipment or offer a different stud. However, if your veterinarian inseminates your female with the semen, ALL guarantees from us are void and there will be no refund. Conception after live motile semen delivery is the sole responsibility of the female's owner and veterinarian. Accurate timing of the female's cycle and proper use of the semen is crucial for your success.

INSTRUCTIONS FOR FRESH COOLED SEMEN:

Information we need to know:

When you will need the semen. We need to know the day prior so it can be shipped overnight for next day morning delivery. Which stud you intend to use. The first day of your female's heat (if using a vet he can tell you what day the semen will need to be inseminated). Contact name, shipping address, and phone of whom the semen will be shipped. A copy of your female's pedigree and photo for our records for filling out the breeder's information for registration.

Stud fee payment is required in advance includes first shipment using Fedex Priority Service @ \$275 for each semen shipping box for the same female. We recommend shipping 2 boxes one day apart for a higher chance of impregnating the bitch. Each box will contain 2 tubes of semen. During collection we do add extender to enhance the longevity and the motility of the semen. We cannot ship on Sundays, Holidays and Saturday in some areas can only deliver on Mondays. Shipping is available to the lower

48 states, PR, Mexico and Most regions of Canada where Fedex provides service. We currently do not offer airport to airport service.

Please call as early as possible, so the semen can be sent out without delay. We will need to know before 3:00 pm if you need semen for the next morning.

NOTE: Before shipping semen everything must be paid in full to ensure no delay on shipment.

Motility analysis should always be performed on samples warmed to 37°C (chilled sperm can appear non-motile or sluggish until warmed). Gently invert the sample tube several times to mix. Using a pipette, place a drop of semen on a pre-warmed microscope slide and cover with a pre-warmed cover slip. If available, keep the slide on a slide warmer or a heated microscope stage for a few minutes before checking the motility under the microscope.

Preparing for Insemination:

Gently invert the sample tube several times to mix.

If you chose to inseminate on two consecutive days, draw up half of the semen dose into the insemination syringe and store the remaining sample in the refrigerator overnight. (Divide the sample into two doses before warming. Do not warm the sample then re-cool it). You can warm the semen sample to be inseminated in your hand or pocket for a few minutes.

Bitch owner agrees to the following to make this a successful breeding:

- Have the bitch progesterone tested prior to breeding and proof of levels.
- Show proof of AKC ownership and pedigree.
- Have a License Veterinarian that specializes in Reproduction perform the Artificial Insemination for higher result of impregnating your Bitch.
- Not have the Bitch near any other males while in heat.
- Feed the Bitch proper a diet during the pregnancy and give any vitamins needed if recommended by a license Veterinarian
- Semen cannot be used on a bitch not named in this contract.
- Do one of the two options to confirm the breeding; ultrasound at 28+ days of breeding or X-rays 55+ days from breeding. These procedures are needed in order to qualify for a repeat breeding if female does not get pregnant.
- Have a license Veterinarian perform a C-section if complications arise during whelping.
- Have a license Veterinarian teach you how to bottle feed and or tube feed incase a puppy is not striving or milk let down is delaying. Frozen plasma is highly recommended.
- Notify the Stud Owner within 48 hours of the litter being born.
- Not leave unattended puppies alone with Bitch for long periods of time to avoid smothering asphyxiation for the first 2-3 weeks.

DEFINITION OF A LITTER:

2 puppies is my definition of a litter, however a Brood Bitch has complete control of how many eggs she releases during ovulation, re-absorption of fetuses, and breeding accuracy done by Bitch Owner which is out of control and responsibility of stud dog and stud dog owner. The Bitch owner must notify the stud dog owner when the litter is born. A litter consists of two puppies that live at least 72 hours. If no pups live past 72 hrs, a return service will be provided by same stud if provided with Veterinarian documentations of X-rays, number of puppies, pictures of deceased pups and Veterinarian exam report. The Second service will be offered on the bitches next

season, or owners choice. Bitch's owner is responsible for additional shipping and collecting fees. If no whelp comes from the second breeding or less than two (2) pups, the money is then non-returnable as service completed under this contract.

REPEAT BREEDING CLAUSE:

No pregnancy: If the female is not pregnant, this should be confirmed by x-rays immediately prior to the due date for the litter along with a vet report in order to qualify for a repeat service via fresh cooled semen, In-house A.I. with fresh semen. Owner of the female is responsible for additional shipping/collecting and or surgical insemination fees at the time of the repeat breeding. Absolutely no cash refund. Rebreeding to same female up to 2x or new female: _____ 1x.

REPEAT BREEDING DOES NOT APPLY:

Owner of Stud is not responsible for loss of litter due to a neglectful Bitch, decreased to no milk supply or inexperienced Owner care. Puppy loss due to freak accident that causes death, fading puppy syndrome, internal/external parasites, parvo virus, CHV virus, severe dehydration, bacterial infection, and pneumonia. Stud fee not refundable nor qualified for repeat under any of these circumstances.

Litter Registration will not be signed until Stud Service has been paid in FULL

No litter registration will be signed or approved online until the litter is whelped and weaned (no earlier than 5 weeks).

UNDERSTANDING THE CONTRACT TERMS:

Buyer agrees that he/she has read the terms and conditions of this contract fully. This contract is under the jurisdiction of the state of California in the county of Ventura. All other states and counties are asked to please accept this contract legally binding and enforceable
