SV DVR QR Code Guide

Using QR Code Setting Up Remote Viewing

DVR Part

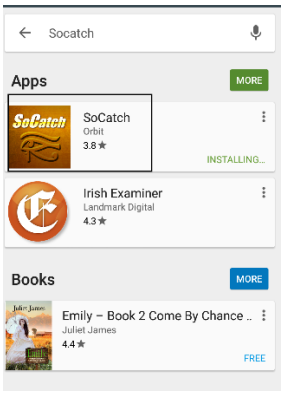
Step 1: From the default live view screen right click to show up the main menu

Step 2: Click on Configure->System Information

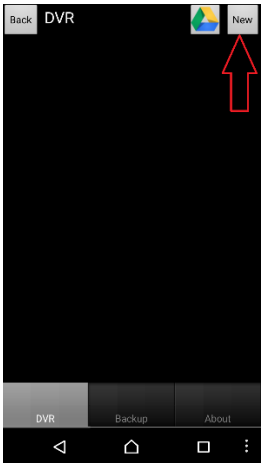
Step 3: In the System Information Menu there will be a QR Code around the middle of the screen

Mobile Part

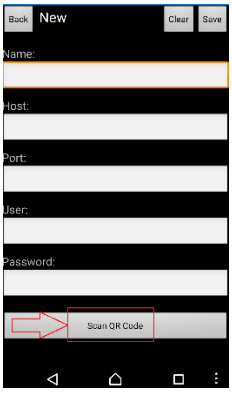
Step 4: Download the SoCatch app from your mobile (Android or iOS). For this case, Android Google Store is used in the picture



Step 5: Open the SoCatch application and click on the 'New' button on the top right hand side of the screen.



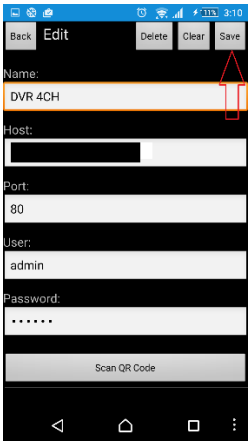
Step 6: A new screen comes up in that screen click 'Scan QR code' button found on the bottom of the screen, Alternatively, you can type the long code just below the QR Code image.



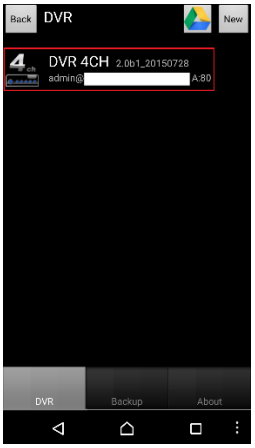
Step 7: Scan the QR code which is opened in Step 3.

Step 8: Fill in the other information, the name of the device is found in Main Menu->System Setup; it is on the top right hand side.

Step 9: The port has to be 80. User is the username of an account in the dvr & Password is the respective password used in the SV HD-DVR for the user account. After filling up all the information click 'Save', on the top right hand side of the screen.



Step 10: Now it will take you to the main screen of the app, where you click the added SV HD-DVR.



Step 11: Now the app will connect with the DVR and show the live view of the DVR.
