PLANAR MAGNETIC HEADPHONES

"Sonically, their new PM-50 planar-magnetic headphones are a hit!" - SoundStage!

PM-50 PLANAR HEADPHONES

The PM-50 Planar Headphones create a spectacularly detailed and musical soundscape for private listening. Typical headphones use dynamic drivers which are susceptible to distortions, which can disrupt listening enjoyment. Andover's Planar Magnetic drivers instead distribute the driving force across the entire diaphragm surface, which eliminates this issue. The resulting sound is more natural, with accurate frequency reproduction. This offers users hours of listening enjoyment without ear-fatigue. The PM-50 can be driven by portable music players, high-end DACs, and dedicated headphone amplifiers.

PM-50 Headphones feature finely crafted, genuine walnut housings that provide a solid acoustic enclosure for the Planar Magnetic drivers. The open-back acoustic design provides transparency and spatiality that is uncommon in conventional headphones.

The ergonomic headband, designed for comfort and light weight, is continuously adjustable for all day listening.

The PM-50 comes with two sets of ear-cushions. The thicker cushions provide a more relaxed presentation, while the thinner cushions provide more immediacy and detail. Listeners can choose their favorite, or change them for specific recordings.

SPECIFICATIONS

Headphone style: Over-Ear
Enclosure structure: Genuine Hardwood
Ear-cushions: Two Sets
Cable: Removable / Upgradeable; 1.8m

Headphone impedance rating: 32 ohms
Frequency response range: 15Hz – 50kHz
Driver sensitivity: 102dB/1mW
