

**SPINDECK MAX**  
AUTOMATIC TURNTABLE

## SPINDECK MAX - AUTOMATIC TURNTABLE

---

SpinDeck MAX perfectly blends the often conflicting goals of great performance with great convenience. In order to extract the incredible musical depth and detail contained in the record grooves, the tonearm must support the phono cartridge accurately without vibration and with minimal friction. It is for precisely this reason that the highest quality turntables are usually fully manual in operation. SpinDeck MAX uniquely provides the convenience of fully automatic operation with none of the compromises common to typical automatic turntables. Precise, low-friction bearings and optimized tonearm design enable the incredibly low 1.5 gram tracking force of the included Ortofon OM10 cartridge. This light tracking cartridge pampers your records while extracting all the detail and impact of the contents of the record groove. This comes as no surprise when you realize that SpinDeck MAX is made for us by a respected German manufacturer who has a 60-year history building state of the art turntables.

But a turntable is so much more than the tonearm. Steady speed and isolation from unwanted vibration are equally important. Accurate speed and quiet operation are assured courtesy of a precise, electronically-regulated DC motor. And unlike virtually all other fully automatic turntables, the platter and tonearm are mounted on a floating subchassis that is isolated from the MDF base, isolating playback from both mechanical and airborne vibrations that can compromise your listening pleasure.

With this much technology, it's easy to see why Tech Hive rated it "Editor's Choice", and Rolling Stone listed it as "Best Turntable" in 2021.

### Features at a glance:

- Fully Automatic operation – The tonearm moves to the beginning of the record at the touch of a switch, and returns to rest when the record ends.
- Quiet belt drive and electronic speed control for stable, unwavering speed.
- Machined full-size 12" aluminum platter
- Ultra light tracking Ortofon OM10 cartridge comes pre-installed.
- Easy set up – Cartridge is pre-mounted and the tonearm comes pre-balanced.
- Comes with hinged dust cover and 45 RPM adapter.

## SPECIFICATIONS

---

### **Turntable**

- Electronically governed 33.3 / 45 RPM speed
- <.04% RMS Wow and Flutter assures stable speed
- >65dB (A-Weighted) means low mechanical rumble
- An effective tonearm length of 8.3" keeps tracking error low.
- Compatible with 100-240VAC / 50-60Hz. <1.5W
- Dimensions: 16.5in(42cm) Wide x 4.75in(12cm) High x 14.1in(35.8 cm) Deep
- Available in Black or White

### **ORTOFON OM10 phono cartridge**

- Wide 20-20,000Hz frequency range delivers the full audible range
- Channel separation exceeds 22dB @ 1kHz for a solid sonic image.
- Output voltage of 4.0mV @ 1kHz, 5cm/sec is compatible with all MM phono inputs
- Stylus type .3mil x .7mil elliptical diamond
- Recommended tracking force 1.25 - 1.75 grams
- Replacement Stylus OM10
