

SPINBASE
TURNTABLE SPEAKER SYSTEM

SPINBASE - TURNTABLE SPEAKER SYSTEM

Spinbase is the first speaker system designed to sit under your turntable, giving music enthusiasts a compact, high-quality solution perfect for small spaces. Equipped with Bluetooth, users can stream music from smart devices in between vinyl plays.

“...spin your records and get satisfyingly smooth, feedback-free sound and musical pleasure well beyond the Spinbase’s \$300 price point. I loved it!”

- Michael Fremer (Editor, Analogplanet.com)

The Spinbase audio system utilizes a clever arrangement of two woofers and two tweeters to produce an expansive stereo-image. Its clarity and output levels match the performance of small bookshelf speakers. Traditional turntable/speaker setups create "sweet spots", which only provide one ideal listening location. Spinbase fills the room with a surprisingly balanced sound stage, making every location the best place to listen.

Easily connect Spinbase to a turntable (e.g. Andover Spindeck) or record player equipped with either a magnetic or ceramic cartridge. Spinbase also supports additional auxiliary devices, such as a music streamer or CD player. Bass and treble EQ controls are available on the back panel, so users can custom tune the sound to their preference. A headphone output allows for quiet listening.

SPECIFICATIONS
